William B Seretta "William"

Patient Health Summary, generated on Aug. 11, 2026

Patient Demographics - Male; born May 02, 1987

Patient Address	Patient Name	Communication
Former (Mar. 30, 2010 - Jun. 19, 2011): 60 OAKLAND AVE *(Home)* YARMOUTH, ME 04096-5320 *(Nov. 12, 2021 -):* 60 OAKLAND AVE *(Home)* YARMOUTH, ME 04096	William B Seretta *Former / Aliases:* William Seretta William Serrata	207-653-8745 (Mobile) william.seretta@gmail.com

Language	Race / Ethnicity	Marital Status
English - Spoken (Preferred) English - Written (Preferred)	Unknown, White / Not Hispanic or Latino	Single

Note from MaineHealth

This document contains information that was shared with William B Seretta. It may not contain the entire record from MaineHealth.

Allergies

Citalopram (Other (See Comments))

Methylphenidate (Other (See Comments))

Adalimumab (Headache)

Lurasidone (Shortness of Breath, Myalgia) - High Criticality

Quetiapine (Other (See Comments))

Medications

Simponi 50 MG/0.5ML Solution Auto-injector (Started 9/17/2021)
every 30 days Unk dose, monthly, for Lyme flare-up, last 10 days ago.

omeprazole (PriLOSEC) 20 MG Capsule Delayed Release
Take 30 mg by mouth daily

amphetamine-dextroamphetamine (Adderall) 20 MG Tab
Take 20 mg by mouth daily 1-2 tabs daily as needed

levoTHYROxine (Synthroid, Levoxyl) 50 MCG Tab
Take 50 mcg by mouth every morning.

lisinopril 10 MG Tab
Take 10 mg by mouth daily.

lithium 300 MG Cap (Started 5/14/2026)
Take 3 Capsules (900 mg total) by mouth at bedtime. Take with 150mg capsule for total daily dose of 1050mg nightly

lithium 150 MG Cap (Started 5/14/2026)
Take 1 Capsule (150 mg total) by mouth at bedtime. Take with 900mg (3 capsules of 300mg) for total daily dose of 1050mg nightly

lamoTRIgine (LaMICtal) 200 MG Tab (Started 5/14/2026)
Take 1 Tablet (200 mg total) by mouth daily.

traZODone (Desyrel) 50 MG Tab (Started 5/14/2026)
Take 1 Tablet (50 mg total) by mouth nightly as needed for Insomnia.

guanFACINE (Intuniv) 1 MG Tablet SR 24 hr (Started 7/24/2026)
Take 1 Tablet (1 mg total) by mouth nightly.

hydrOXYzine Pamoate (VISTARIL) 25 MG Cap (Started 7/24/2026)
TAKE ONE TO TWO CAPSULES BY MOUTH DAILY AS NEEDED FOR ANXIETY OR ITCHING

Active Problems

Problem	Noted Date	Diagnosed Date
Anxiety	06/25/2026	
ADHD	06/25/2026	
Vitamin D deficiency	03/23/2022	
Rectal bleeding	03/14/2022	
B12 deficiency	03/14/2022	
Lyme arthritis	03/12/2022	
Bipolar 1 disorder	03/11/2022	
Polyneuropathy, peripheral sensorimotor axonal	10/17/2021	
Severe cannabis use disorder		

Resolved Problems

Problem	Noted Date	Diagnosed Date	Resolved Date
Major depression, recurrent, chronic	02/28/2020		04/21/2022
Bipolar disorder			04/21/2022

Social History

Tobacco Use	Types	Packs/Day	Years Used	Date
Smoking Tobacco: Some Days				
Smokeless Tobacco: Never				

Tobacco Cessation: Ready to Quit: Not Asked; Counseling Given: Not Answered

Alcohol Use	Standard Drinks/Week
Not Currently	0 (1 standard drink = 0.6 oz pure alcohol)

PHQ-2	Answer	Date Recorded
Patient Health Questionnaire-2 Score	3	04/06/2025

Hunger Vital Sign	Answer	Date Recorded
Within the past 12 months, you worried that your food would run out before you got the money to buy more.	Never true	03/11/2022
Within the past 12 months, the food you bought just didn't last and you didn't have money to get more.	Never true	03/11/2022

Substance Use	Types	Use/Week
Yes	Marijuana	

Sex and Gender Information	Value	Date Recorded
Sex Assigned at Birth	Male	05/11/2022 4:52 AM EDT
Legal Sex	Male	11/04/2012 6:52 AM EST
Gender Identity	Male	05/11/2022 4:52 AM EDT
Sexual Orientation	Straight	05/11/2022 4:52 AM EDT

Travel History	Travel Start	Travel End
New Jersey	07/29/2026	08/04/2026

Last Filed Vital Signs

Vital Sign	Reading	Time Taken	Comments
Blood Pressure	127/77	08/07/2026 7:53 PM EDT	
Pulse	86	08/07/2026 7:52 PM EDT	
Temperature	36.5 °C (97.7 °F)	08/07/2026 7:52 PM EDT	
Respiratory Rate	18	08/07/2026 7:52 PM EDT	
Oxygen Saturation	99%	08/07/2026 7:52 PM EDT	
Inhaled Oxygen Concentration	99%	08/07/2026 7:52 PM EDT	
Weight	106.6 kg (235 lb)	03/29/2024 9:15 AM EDT	
Height	185.4 cm (6' 1")	03/29/2024 9:15 AM EDT

Results

LITHIUM LEVEL - Final result (08/07/2026 8:05 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Lithium Level	1.4	See Comment: mEq/L		08/07/2026 9:10 PM EDT	NORDX MMC CAMPUS	

Comment:

```
Therapeutic ranges:
 Acute Mania-0.8-1.2 mEq/L
 Bipolar Maintenance: 0.6-1 mEq/L
 Major depressive disorder: 0.6 to 0.9 mEq/L
 Older adults: Consider 0.4-0.8 mEq/L.
```

Creatinine	1.17	0.50 - 1.30 mg/dL		08/07/2026 8:41 PM EDT	NORDX MMC CAMPUS	
BUN Creatinine Ratio	17.1			08/07/2026 8:41 PM EDT	NORDX MMC CAMPUS	
eGFRcr Male (CKD-EPI 2021)	81	>60 mL/min/1.73m*2		08/07/2026 8:41 PM EDT	NORDX MMC CAMPUS	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Comment:						
Please note that as of 6/24/2025 eGFRcr calculation is updated and reported based on the CKD-EPI 2021 equation using blood creatinine levels. The new eGFRcr equation has similar overall performance characteristics to the older equations. Estimated GFR values have limitations and need to be interpreted based on clinical context. National Kidney Foundation guidelines recommend ordering cystatin C as a confirmatory test for patients with eGFRcr of 45-59 mL/min/1.73m2 with urine albumin-creatinine ratio <30 mg/g, and in patients for whom the creatinine may be a less reliable indicator of GFR near decision points. See NorDx Test Catalog for more information.

COMPREHENSIVE METABOLIC PANEL - Final result (12/10/2025 1:27 PM EST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Sodium	138	135 - 145 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Potassium	4.9	3.5 - 5.1 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Chloride	102	96 - 108 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Carbon Dioxide	25	21 - 30 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Anion Gap	11	7 - 16 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Blood Urea Nitrogen	13	6 - 20 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Creatinine	0.89	0.50 - 1.30 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
BUN Creatinine Ratio	14.6			12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
eGFRcr Male (CKD-EPI 2021)	112	>60 mL/min/1.73m*2		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Comment: Please note that as of 6/24/2025 eGFRcr calculation is updated and reported based on the CKD-EPI 2021 equation using blood creatinine levels. The new eGFRcr equation has similar overall performance characteristics to the older equations. Estimated GFR values have limitations and need to be interpreted based on clinical context. National Kidney Foundation guidelines recommend ordering cystatin C as a confirmatory test for patients with eGFRcr of 45-59 mL/min/1.73m2 with urine albumin-creatinine ratio <30 mg/g, and in patients for whom the creatinine may be a less reliable indicator of GFR near decision points. See NorDx Test Catalog for more information.						
Glucose	91	70 - 99 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Comment: Per ADA guidelines these ranges are for fasting glucose only

Narrative

NORDX SCARBOROUGH CAMPUS - 09/18/2024 4:27 AM EDT
<18 years: Hemoglobin A1c criteria for diagnosing diabetes have not been established for patients who are <18 years of age.

> or =18 years: Increased risk for diabetes (prediabetes): 5.7-6.4%

Diabetes: > or =6.5%

Falsely low percent A1c may be seen with abnormal hemoglobin variants or shortened erythrocyte survival (such as hemolysis, blood loss and pregnancy).

US ABDOMEN PELVIS VASCULAR STUDY COMPLETE - Final result (06/14/2024 8:04 AM EDT)

Anatomical Region	Laterality	Modality
Visceral, Abdomen, Pelvis, Hip, Vascular		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			06/14/2024 7:30 AM EDT	

Narrative

06/14/2024 8:28 AM EDT

EXAM: US ABDOMEN PELVIS VASCULAR STUDY COMPLETE

INDICATION: increasing LFTs, ?thrombus

COMPARISON: None.

TECHNIQUE: Grayscale and duplex Doppler imaging of the right upper quadrant and associated vasculature was performed.

FINDINGS: There is homogeneous liver echotexture without focal mass. There is no biliary dilation, with the common bile duct measuring 4 mm caliber.

There is no cholelithiasis, gallbladder wall thickening, or pericholecystic fluid. Visualized portions of pancreas, kidneys, and spleen are normal.

Doppler interrogation demonstrates normal flow direction and waveform morphology within the hepatic and portal veins. Splenic vein and hepatic arterial waveforms are similarly normal.

IMPRESSION: Unremarkable exam.

WORKSTATION: SPECTRUMHOME7

* * THIS IS AN ELECTRONICALLY VERIFIED REPORT CREATED USING VOICE RECOGNITION * * 6/14/2024 8:26 AM

Narrative

Test Method:
Real-Time PCR assay to detect and differentiate HSV-1 and HSV-2

NOTE:
A negative result does not eliminate the possibility of herpes simplex virus (HSV) infection. This assay is only to be used for patients with a clinical history and symptoms consistent with HSV infection, and must be interpreted in the context of clinical symptoms.
This test was developed and its performance characteristics determined by NorDx consistent with CLIA requirements. It has not been cleared or approved by the U.S. Food and Drug Administration (FDA). This test is used for clinical purposes and should not be regarded as investigational or for research.

US GUIDED LIVER BIOPSY - Final result (03/29/2024 10:55 AM EDT)

Anatomical Region	Laterality	Modality
Abdomen		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			03/29/2024 10:00 AM EDT	

Narrative

04/04/2024 12:23 PM EDT

Narrative

EXAM: US GUIDED LIVER BIOPSY

Procedural Personnel
Attending(s): Dan Kloda, DO
Fellow(s): None
Resident(s): None
Advanced practice provider(s): None

Preprocedure diagnosis: Elevated LFTs
Post-procedure diagnosis: Same

INDICATION: increasing LFTs

Complications: None

IMPRESSION: Successful ultrasound-guided random liver biopsy.

Plan: Specimens were submitted to pathology for analysis in formalin.

PROCEDURE SUMMARY:
1. Biopsy of liver, needle; percutaneous
2. Ultrasonic guidance for needle placement, imaging supervision and interpretation

PROCEDURE DETAILS:

Pre-procedure

COMPARISON: None

Informed consent for the procedure was obtained and time-out was performed prior to the procedure.
Preparation (MIPS): The site was prepared and draped using all elements of maximal sterile barrier technique including sterile gloves, sterile gown, cap, mask, large sterile sheet, sterile ultrasound probe cover, hand hygiene and cutaneous antisepsis
with povidone-iodine.
Medical reason for site preparation exception (MIPS): Not applicable

Anesthesia/Sedation
Level of anesthesia/sedation: No sedation
Anesthesia/sedation administered by: Not applicable
Total intra-service sedation time: 30 minutes.

Access
Local anesthesia was administered. The liver was sonographically evaluated and judged appropriate for access. Real time ultrasound was used to visualize needle entry into the liver and a permanent image was stored.
Access side: Right
Access ultrasound findings: No focal hepatic mass.
Access technique: 20-gauge coaxial biopsy needle

TECHNIQUE:
The patient was positioned supine. The skin of the abdomen overlying the liver was prepped and draped in the usual sterile fashion. After local anesthesia with 8 mL 2% lidocaine without epinephrine and using real-time ultrasound guidance, the needle
was advanced percutaneously into the liver. The specimen(s) were obtained.

Closure
The needle was removed and hemostasis was achieved with manual compression. Sterile dressing(s) applied.

FINDINGS:
Additional description of procedure: None
Additional findings: None
Equipment details: None
Specimens removed: 3 20 gauge core needle biopsy specimens were obtained.
Estimated blood loss: Less than 10 mL

Attestation
I, Dan Kloda, DO, attest that I was present for the entire procedure. I reviewed the stored images and agree with the report as written.

Narrative

SERVICES PROVIDED BY NORDX LABORATORY - 04/04/2024 12:57 PM EDT
CASE: SS-24-08109
PATIENT: WILLIAM SERETTA
SPECIMEN: A. 20G CORE LIVER BX Client: RADO

FINAL DIAGNOSIS:
A. Liver, core biopsy:
-Steatohepatitis with no significant fibrosis (stage 0 of 4). See comment.

Comment: The biopsy is adequate and shows a mild and patchy steatohepatitis. Bile ducts appear intact. Etiologic considerations include alcohol, and the various causes of non-alcoholic fatty liver disease (NAFLD). An iron stain is negative. No prominent intracytoplasmic globules on PAS/PAS-D stains. Trichrome and reticulin stains show the pattern of fibrosis. Quantitative copper studies can be ordered on block (A1) if clinically indicated.

Histochemical stains
Trichrome 1A as above
Reticulin 1A as above
Iron 1A as above
PAS 1A as above
PAS-D 1A as above

Sign-out Pathologist:
Hagen Blaszyk, MD
/vao 04/04/24

CLINICAL HISTORY: Elevated LFTs
GROSS DESCRIPTION:
A. Container: Formalin, labeled SERETTA, WILLIAM B and liver BX x 4 cores
Description: Received are 4 tan cores of tissue ranging from 0.6 to 2.2 cm in length and each less than 0.1 cm in diameter entirely submitted in 1 cassette. NS
AJG 3/29/2024

Oxazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Alpha Hydroxyalprazolam Ur Qn	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
7-NH-Clonazepam Ur Qn	208	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Hydroxyethylflurazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Creatinine Biomarker UR Benz	145	mg/dL			PERFORMED BY REFERENCE LABORATORY	
Oxidants UR Benz	Negative				PERFORMED BY REFERENCE LABORATORY	

Comment:

```
   The benzodiazepine confirmation assay
   detects lorazepam, nordiazepam, temazepam,
   7-aminoclonazepam, 2-hydroxyethylflurazepam,
   and oxazepam at a decision level of 40 ng/mL
   and alpha hydroxyalprazolam at a decision
   level of 20 ng/mL.

Adulterant Decision Limit:
 General Oxidants       200 ug/mL

The adulterant assay tests for General Oxidants,
including Chromates and Nitrites.  Adulterants are
substances either ingested or added directly to a
urine specimen to prevent the detection of drug use.

If applicable, any drug confirmation testing reported
here was developed and the performance characteristics
determined by Warde Medical Laboratory. This
confirmation testing has not been cleared or approved
by the FDA. The laboratory is regulated under CLIA as
qualified to perform high-complexity testing. This test
is used for patient testing purposes. It should not be
regarded as investigational or for research.

Test performed at Warde Medical Laboratory,
300 W. Textile Rd, Ann Arbor, MI  48108     800-876-6522
Kajal V. Sitwala, MD, PhD - Medical Director

NM LOC SPECT CT, SINGLE AREA, SINGLE DAY BONE - Final result (09/01/2022 3:28 PM EDT)

Anatomical Region	Laterality	Modality
		Nuclear Medicine

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/01/2022 2:00 PM EDT	

Narrative

09/01/2022 4:40 PM EDT

EXAM: NM LOC SPECT CT, SINGLE AREA, SINGLE DAY BONE

INDICATION: chronic mid back pain worse lately STUDY NOTES: 21.8 mci mdp in lac.

COMPARISON: MRI spine dated back to 10/04/2021.

RADIOPHARMACEUTICAL: 12.8 mCi technetium 99m MDP

TECHNIQUE: Planar scintigraphic images of the thoracic spine were obtained. Multiplanar SPECT and fused SPECT/CT images were also obtained and reviewed.

FINDINGS: There is normal activity within the thoracic spine..

IMPRESSION: Normal examination.

This report has been read by Frank Weng, MD and will be reviewed by the attending radiologist covering this service. 9/1/2022 4:05 PM

I, Michael Quinn, MD have personally reviewed the images and interpretation and agree with the final report. Dictated by Frank Weng, MD.

WORKSTATION: WS6

* * THIS IS AN ELECTRONICALLY VERIFIED REPORT CREATED USING VOICE RECOGNITION * * 9/1/2022 4:38 PM

BENZODIAZEPINE UR QN - Final result (08/08/2022 11:44 AM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Nordiazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Lorazepam, UR	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Temazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Oxazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Alpha Hydroxyalprazolam Ur Qn	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
7-NH-Clonazepam Ur Qn	205	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Hydroxyethylflurazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Creatinine Biomarker UR Benz	226	mg/dL			PERFORMED BY REFERENCE LABORATORY	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Oxidants UR Benz	Negative				PERFORMED BY REFERENCE LABORATORY	

Comment:

```
   The benzodiazepine confirmation assay
   detects lorazepam, nordiazepam, temazepam,
   7-aminoclonazepam, 2-hydroxyethylflurazepam,
   and oxazepam at a decision level of 40 ng/mL
   and alpha hydroxyalprazolam at a decision
   level of 20 ng/mL.

Adulterant Decision Limit:
 General Oxidants       200 ug/mL

The adulterant assay tests for General Oxidants,
including Chromates and Nitrites.  Adulterants are
substances either ingested or added directly to a
urine specimen to prevent the detection of drug use.

If applicable, any drug confirmation testing reported
here was developed and the performance characteristics
determined by Warde Medical Laboratory. This
confirmation testing has not been cleared or approved
by the FDA. The laboratory is regulated under CLIA as
qualified to perform high-complexity testing. This test
is used for patient testing purposes. It should not be
regarded as investigational or for research.

Test performed at Warde Medical Laboratory,
300 W. Textile Rd, Ann Arbor, MI  48108     800-876-6522
William G. Finn, MD  - Medical Director

SARS-COV-2 ASYMPTOMATIC PCR SCREEN - Final result (04/04/2022 12:00 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.

This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.

This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease

PR NERVE CONDUCTION STUDIES 9-10 STUDIES, PR NEEDLE EMG EA EXTREMITY W/PARASPINL AREA LIMITED (12/01/2021 5:30 PM EST)

Narrative

.MANUAL ENTRY (EXTERNAL LAB) - 12/01/2021 5:30 PM EST

This result has an attachment that is not available.

Narrative

Kleinman, Michael S, DO 12/1/2021 5:31 PM
EMG & NCV Findings:
Motor conduction studies of the left peroneal nerve recording extensor digitorum brevis demonstrated a severely reduced (nearly absent) response amplitude with stimulation at the ankle. The distal latency is severely prolonged though this is not considered to be technically accurate given how low the response amplitude is.

Motor conduction studies of the left peroneal nerve recording tibialis anterior demonstrates a normal distal latency, moderately reduced response amplitudes and normal conduction velocity across the fibular head.

Motor conduction studies of the left tibial nerve demonstrated a moderately prolonged distal latency, severely reduced response amplitudes and mildly slowed conduction velocity. F-wave minimum latency was moderately prolonged.

Motor conduction studies of the right peroneal nerve recording extensor digitorum brevis demonstrated a severely reduced (nearly absent) response amplitude with stimulation at the ankle.

Motor conduction studies of the right tibial nerve with stimulation at the ankle demonstrated a mildly prolonged distal latency and severely reduced response amplitude.

Motor conduction studies of the left ulnar nerve were normal, including F-wave minimal latency.

The left sural sensory response was absent. Sensory conduction study of the right sural nerve demonstrated a severely reduced response amplitude and moderately slowed conduction velocity.

Sensory conduction study of the left radial nerve was normal.

Concentric needle electromyography (EMG) was performed in selected muscles representing the left L4-S1 myotomes. Mild active denervation with moderate chronic reinnervation and mildly reduced recruitment was seen in tibialis anterior. Severe chronic reinnervation with mildly reduced recruitment was seen in extensor hallucis longus. Mild chronic reinnervation was seen in medial gastrocnemius. Vastus lateralis was normal.

Impression:
Abnormal study. The electrophysiologic data is consistent with a severe axonal generalized sensorimotor polyneuropathy.

Procedure Note

Michael Kleinman, DO - 12/01/2021 5:30 PM EST

Procedure Note

Formatting of this note might be different from the original.

EMG & NCV Findings:

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

Narrative

03/26/2021 7:53 PM EDT

Narrative

EXAM: XR CHEST PORTABLE

INDICATION: cough

COMPARISON: None.

TECHNIQUE: Single view of the chest.

FINDINGS:

The lungs are clear. There is no pleural effusion or pneumothorax. Mediastinal contour, hilar contour, heart size and pulmonary vascularity are within normal limits. Visualized osseous structures are unremarkable.

IMPRESSION:

No acute process identified.

This report has been read by David Pozivilko, MD and will be reviewed by the attending radiologist covering this service. 3/26/2021 7:30 PM

I, Brian Livingston, MD have personally reviewed the images and interpretation and agree with the final report. Dictated by David Pozivilko, MD.

* * THIS IS AN ELECTRONICALLY VERIFIED REPORT CREATED USING VOICE RECOGNITION * * 3/26/2021 7:51 PM

Bokat, Pamela G, MD     8/26/2020  9:04 AM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 8/26/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 23
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 45 % energy
Pulse Width:0.5
Frequency:45
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 23 seconds and Motor Seizure length
=   seconds

The seizure was Excellent
Significant problem with treatment: No
Procedure Comments: good seizure but briefer

The plan for the next treatment includes : would increase to
0.5/55/8.0.  Per psychiatric assessment, pt reports chronic
passive suicidal ideation without plan or intent.  He reports
that ECT improves his suicidal thoughts and looks forward to
returning in 1.5 weeks.  He has a good support system and
providers and feels safe to go home.
The next treatment is scheduled for 1.5 Week(s)

Muscat, Sarah D, MD 6/12/2020 9:53 AM
ECT PROCEDURE NOTE

Problem List Date Reviewed: 6/12/2020
ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9 2/28/2020

ECT Treatment # 18
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 51 % energy
Pulse Width:0.5
Frequency:45
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 13 seconds and Motor Seizure length = 13 seconds

The seizure was Brief, Adequate
Significant problem with treatment: No
Procedure Comments: Patient did not fall asleep quickly wth 100 of methohexital so gave succ then additional 30 methohexital. Because of this recent bolus his seizure was shorter however was good wave form. As was longer than ten seconds did not want to restimulate

The plan for the next treatment includes : Would use 120 methohexital as initial bolus; HV if possible; succ dose is good, consider slight increase in stimulus dose to 60%
The next treatment is scheduled for 2 Week(s)

Clinically we discussed that he has had a good response to ECT
We will continue with slow taper, plan to continue for six months (began end of 2/20)
Coordinate with his psychiatric provider.

US GUIDED LIVER BIOPSY - Final result (04/03/2015 11:53 AM EDT)

Anatomical Region	Laterality	Modality
Abdomen		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			04/03/2015 10:00 AM EDT	

Narrative

04/06/2015 8:05 AM EDT

EXAM: ULTRASOUND-GUIDED PERCUTANEOUS RANDOM CORE LIVER BIOPSY

INDICATION: Ultrasound-guided liver biopsy requested. Reactive arthritis. Elevated ALT, AST. Evaluate for hemochromatosis with quantitative iron evaluation as well.

COMPARISON: Ultrasound 12/23/14.

FINDINGS: Identification and procedure time out were performed. Signed informed consent was obtained.

The biopsy was performed by Dr. Winn with Dr. Brian Alan Perry.

An oblique right intercostal approach was selected. Realtime ultrasound guidance was used throughout the procedure. Standard sterile preparation and technique were employed. Local anesthesia was obtained with infusion of 1% lidocaine solution. A
biopsy was performed with coaxial technique with the need for multiple core specimens for the diagnostic testing requested, per discussion with the Pathology department prior to the procedure. With realtime ultrasound guidance, a 17-gauge introducer
needle was placed into the right lobe of the liver. A biopsy was performed through that with an 18-gauge spring loaded automatic core biopsy needle. Two separate 2 cm long cores were obtained. These were placed together in a single container of
formalin and submitted for histopathologic evaluation and quantitative iron evaluation. The biopsy needle was removed and stylet was placed within the coaxial needle. After approximately 3 minutes the stylet was removed and revealed no bleeding through
the coaxial needle. The coaxial needle was then removed. Postbiopsy imaging showed no evidence of hemorrhage or immediate perihepatic hematoma.

The site was cleansed and a band-aid was applied. The patient was placed in right lateral decubitus recumbency and brought to the radiology nursing area for postbiopsy observation with orders placed in the electronic medical record. Specimen was
submitted for diagnostic testing as ordered.

IMPRESSION: Ultrasound-guided percutaneous random core liver biopsy performed. Details above.

Narrative

CASE: SS-15-08090
PATIENT: WILLIAM SERETTA

SPECIMEN: A. RT LOBE LIVER BX Client: RADO

FINAL DIAGNOSIS:

Liver, right lobe, needle core biopsy: Steatohepatitis with early zone 3 fibrosis.
- Kleiner NAS score including:
Steatosis: 2/3.
Lobular inflammation: 1/3.
Ballooning degeneration: 1/2.
- Fibrosis: 1A.
DMD/cbp 4/6/2015

COMMENT:

The biopsy is adequate and shows an active steatohepatitis. Bile ducts appear intact. Etiological considerations would alcohol and the various causes of non-alcoholic fatty liver disease. The Kleiner activity score and fibrosis are provided. A reticulin stain highlights non-neoplastic hepatic plate architecture with focal areas of collapse. An iron stain is focally positive within the Kupffer cells. There is no hepatocyte or bile duct accumulation of iron. The iron does not appear increased significantly. Serologic iron testing may be influenced by the steatohepatitis identified. No prominent intracytoplasmic globules are identified on PAS/PAS-D stains. A trichrome stain shows a pattern of fibrosis limited to the zone 3.

CLINICAL HISTORY: 27-year-old male with reactive arthritis and elevated AST/ALT. Evaluate for hemochromatosis.

GROSS DESCRIPTION:

The specimen is received in formalin labeled William B. Seretta and consists of five tan cores of tissue ranging from 0.5 to 1.7 cm in length and each measuring 0.1 cm in diameter. (5NS) (1 cassette)
AJG/cms 04/03/2015

Results - as of 08/11/2026

LITHIUM LEVEL - Final result (08/07/2026 8:05 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Lithium Level	1.4	See Comment: mEq/L		08/07/2026 9:10 PM EDT	NORDX MMC CAMPUS	

Comment:

```
Therapeutic ranges:
 Acute Mania-0.8-1.2 mEq/L
 Bipolar Maintenance: 0.6-1 mEq/L
 Major depressive disorder: 0.6 to 0.9 mEq/L
 Older adults: Consider 0.4-0.8 mEq/L.
```

Creatinine	1.17	0.50 - 1.30 mg/dL		08/07/2026 8:41 PM EDT	NORDX MMC CAMPUS	
BUN Creatinine Ratio	17.1			08/07/2026 8:41 PM EDT	NORDX MMC CAMPUS	
eGFRcr Male (CKD-EPI 2021)	81	>60 mL/min/1.73m*2		08/07/2026 8:41 PM EDT	NORDX MMC CAMPUS	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Comment:						
Please note that as of 6/24/2025 eGFRcr calculation is updated and reported based on the CKD-EPI 2021 equation using blood creatinine levels. The new eGFRcr equation has similar overall performance characteristics to the older equations. Estimated GFR values have limitations and need to be interpreted based on clinical context. National Kidney Foundation guidelines recommend ordering cystatin C as a confirmatory test for patients with eGFRcr of 45-59 mL/min/1.73m2 with urine albumin-creatinine ratio <30 mg/g, and in patients for whom the creatinine may be a less reliable indicator of GFR near decision points. See NorDx Test Catalog for more information.

COMPREHENSIVE METABOLIC PANEL - Final result (12/10/2025 1:27 PM EST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Sodium	138	135 - 145 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Potassium	4.9	3.5 - 5.1 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Chloride	102	96 - 108 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Carbon Dioxide	25	21 - 30 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Anion Gap	11	7 - 16 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Blood Urea Nitrogen	13	6 - 20 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Creatinine	0.89	0.50 - 1.30 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
BUN Creatinine Ratio	14.6			12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
eGFRcr Male (CKD-EPI 2021)	112	>60 mL/min/1.73m*2		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Comment: Please note that as of 6/24/2025 eGFRcr calculation is updated and reported based on the CKD-EPI 2021 equation using blood creatinine levels. The new eGFRcr equation has similar overall performance characteristics to the older equations. Estimated GFR values have limitations and need to be interpreted based on clinical context. National Kidney Foundation guidelines recommend ordering cystatin C as a confirmatory test for patients with eGFRcr of 45-59 mL/min/1.73m2 with urine albumin-creatinine ratio <30 mg/g, and in patients for whom the creatinine may be a less reliable indicator of GFR near decision points. See NorDx Test Catalog for more information.						
Glucose	91	70 - 99 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Comment: Per ADA guidelines these ranges are for fasting glucose only

Blood	VENOUS STRUCTURE / Unknown	Venipuncture / Unknown	09/17/2024 2:18 PM EDT	09/17/2024 2:18 PM EDT

Narrative

NORDX SCARBOROUGH CAMPUS - 09/18/2024 4:27 AM EDT
<18 years: Hemoglobin A1c criteria for diagnosing diabetes have not been established for patients who are <18 years of age.

> or =18 years: Increased risk for diabetes (prediabetes): 5.7-6.4%

Diabetes: > or =6.5%

Falsely low percent A1c may be seen with abnormal hemoglobin variants or shortened erythrocyte survival (such as hemolysis, blood loss and pregnancy).

US ABDOMEN PELVIS VASCULAR STUDY COMPLETE - Final result (06/14/2024 8:04 AM EDT)

Anatomical Region	Laterality	Modality
Visceral, Abdomen, Pelvis, Hip, Vascular		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			06/14/2024 7:30 AM EDT	

Narrative

06/14/2024 8:28 AM EDT

EXAM: US ABDOMEN PELVIS VASCULAR STUDY COMPLETE

INDICATION: increasing LFTs, ?thrombus

COMPARISON: None.

TECHNIQUE: Grayscale and duplex Doppler imaging of the right upper quadrant and associated vasculature was performed.

FINDINGS: There is homogeneous liver echotexture without focal mass. There is no biliary dilation, with the common bile duct measuring 4 mm caliber.

There is no cholelithiasis, gallbladder wall thickening, or pericholecystic fluid. Visualized portions of pancreas, kidneys, and spleen are normal.

Doppler interrogation demonstrates normal flow direction and waveform morphology within the hepatic and portal veins. Splenic vein and hepatic arterial waveforms are similarly normal.

IMPRESSION: Unremarkable exam.

WORKSTATION: SPECTRUMHOME7

Narrative

Test Method:
Real-Time PCR assay to detect and differentiate HSV-1 and HSV-2

NOTE:
A negative result does not eliminate the possibility of herpes simplex virus (HSV) infection. This assay is only to be used for patients with a clinical history and symptoms consistent with HSV infection, and must be interpreted in the context of clinical symptoms.
This test was developed and its performance characteristics determined by NorDx consistent with CLIA requirements. It has not been cleared or approved by the U.S. Food and Drug Administration (FDA). This test is used for clinical purposes and should not be regarded as investigational or for research.

US GUIDED LIVER BIOPSY - Final result (03/29/2024 10:55 AM EDT)

Anatomical Region	Laterality	Modality
Abdomen		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			03/29/2024 10:00 AM EDT	

Narrative

04/04/2024 12:23 PM EDT

Narrative

EXAM: US GUIDED LIVER BIOPSY

Procedural Personnel
Attending(s): Dan Kloda, DO
Fellow(s): None
Resident(s): None
Advanced practice provider(s): None

Preprocedure diagnosis: Elevated LFTs
Post-procedure diagnosis: Same

INDICATION: increasing LFTs

Complications: None

IMPRESSION: Successful ultrasound-guided random liver biopsy.

Plan: Specimens were submitted to pathology for analysis in formalin.

PROCEDURE SUMMARY:
1. Biopsy of liver, needle; percutaneous
2. Ultrasonic guidance for needle placement, imaging supervision and interpretation

PROCEDURE DETAILS:

Pre-procedure

COMPARISON: None

Informed consent for the procedure was obtained and time-out was performed prior to the procedure.
Preparation (MIPS): The site was prepared and draped using all elements of maximal sterile barrier technique including sterile gloves, sterile gown, cap, mask, large sterile sheet, sterile ultrasound probe cover, hand hygiene and cutaneous antisepsis
with povidone-iodine.
Medical reason for site preparation exception (MIPS): Not applicable

Anesthesia/Sedation
Level of anesthesia/sedation: No sedation
Anesthesia/sedation administered by: Not applicable
Total intra-service sedation time: 30 minutes.

Access
Local anesthesia was administered. The liver was sonographically evaluated and judged appropriate for access. Real time ultrasound was used to visualize needle entry into the liver and a permanent image was stored.
Access side: Right
Access ultrasound findings: No focal hepatic mass.
Access technique: 20-gauge coaxial biopsy needle

TECHNIQUE:
The patient was positioned supine. The skin of the abdomen overlying the liver was prepped and draped in the usual sterile fashion. After local anesthesia with 8 mL 2% lidocaine without epinephrine and using real-time ultrasound guidance, the needle
was advanced percutaneously into the liver. The specimen(s) were obtained.

Closure
The needle was removed and hemostasis was achieved with manual compression. Sterile dressing(s) applied.

FINDINGS:
Additional description of procedure: None
Additional findings: None
Equipment details: None
Specimens removed: 3 20 gauge core needle biopsy specimens were obtained.
Estimated blood loss: Less than 10 mL

Attestation
I, Dan Kloda, DO, attest that I was present for the entire procedure. I reviewed the stored images and agree with the report as written.

Narrative

SERVICES PROVIDED BY NORDX LABORATORY - 04/04/2024 12:57 PM EDT
CASE: SS-24-08109
PATIENT: WILLIAM SERETTA
SPECIMEN: A. 20G CORE LIVER BX Client: RADO

FINAL DIAGNOSIS:
A. Liver, core biopsy:
-Steatohepatitis with no significant fibrosis (stage 0 of 4). See comment.

Comment: The biopsy is adequate and shows a mild and patchy steatohepatitis. Bile ducts appear intact. Etiologic considerations include alcohol, and the various causes of non-alcoholic fatty liver disease (NAFLD). An iron stain is negative. No prominent intracytoplasmic globules on PAS/PAS-D stains. Trichrome and reticulin stains show the pattern of fibrosis. Quantitative copper studies can be ordered on block (A1) if clinically indicated.

Histochemical stains
Trichrome 1A as above
Reticulin 1A as above
Iron 1A as above
PAS 1A as above
PAS-D 1A as above

Sign-out Pathologist:
Hagen Blaszyk, MD
/vao 04/04/24

CLINICAL HISTORY: Elevated LFTs
GROSS DESCRIPTION:
A. Container: Formalin, labeled SERETTA, WILLIAM B and liver BX x 4 cores
Description: Received are 4 tan cores of tissue ranging from 0.6 to 2.2 cm in length and each less than 0.1 cm in diameter entirely submitted in 1 cassette. NS
AJG 3/29/2024

Hydroxyethylflurazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Creatinine Biomarker UR Benz	145	mg/dL			PERFORMED BY REFERENCE LABORATORY	
Oxidants UR Benz	Negative				PERFORMED BY REFERENCE LABORATORY	

Comment:

```
   The benzodiazepine confirmation assay
   detects lorazepam, nordiazepam, temazepam,
   7-aminoclonazepam, 2-hydroxyethylflurazepam,
   and oxazepam at a decision level of 40 ng/mL
   and alpha hydroxyalprazolam at a decision
   level of 20 ng/mL.

Adulterant Decision Limit:
 General Oxidants       200 ug/mL

The adulterant assay tests for General Oxidants,
including Chromates and Nitrites.  Adulterants are
substances either ingested or added directly to a
urine specimen to prevent the detection of drug use.

If applicable, any drug confirmation testing reported
here was developed and the performance characteristics
determined by Warde Medical Laboratory. This
confirmation testing has not been cleared or approved
by the FDA. The laboratory is regulated under CLIA as
qualified to perform high-complexity testing. This test
is used for patient testing purposes. It should not be
regarded as investigational or for research.

Test performed at Warde Medical Laboratory,
300 W. Textile Rd, Ann Arbor, MI  48108     800-876-6522
Kajal V. Sitwala, MD, PhD - Medical Director

NM LOC SPECT CT, SINGLE AREA, SINGLE DAY BONE - Final result (09/01/2022 3:28 PM EDT)

Anatomical Region	Laterality	Modality
		Nuclear Medicine

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/01/2022 2:00 PM EDT	

Narrative

09/01/2022 4:40 PM EDT

EXAM: NM LOC SPECT CT, SINGLE AREA, SINGLE DAY BONE

INDICATION: chronic mid back pain worse lately STUDY NOTES: 21.8 mci mdp in lac.

COMPARISON: MRI spine dated back to 10/04/2021.

RADIOPHARMACEUTICAL: 12.8 mCi technetium 99m MDP

TECHNIQUE: Planar scintigraphic images of the thoracic spine were obtained. Multiplanar SPECT and fused SPECT/CT images were also obtained and reviewed.

FINDINGS: There is normal activity within the thoracic spine..

IMPRESSION: Normal examination.

This report has been read by Frank Weng, MD and will be reviewed by the attending radiologist covering this service. 9/1/2022 4:05 PM

I, Michael Quinn, MD have personally reviewed the images and interpretation and agree with the final report. Dictated by Frank Weng, MD.

WORKSTATION: WS6

* * THIS IS AN ELECTRONICALLY VERIFIED REPORT CREATED USING VOICE RECOGNITION * * 9/1/2022 4:38 PM

BENZODIAZEPINE UR QN - Final result (08/08/2022 11:44 AM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Nordiazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Lorazepam, UR	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Temazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Oxazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Alpha Hydroxyalprazolam Ur Qn	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
7-NH-Clonazepam Ur Qn	205	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Hydroxyethylflurazepam UR QN	Negative	ng/mL			PERFORMED BY REFERENCE LABORATORY	
Creatinine Biomarker UR Benz	226	mg/dL			PERFORMED BY REFERENCE LABORATORY	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Oxidants UR Benz	Negative				PERFORMED BY REFERENCE LABORATORY	

Comment:

```
   The benzodiazepine confirmation assay
   detects lorazepam, nordiazepam, temazepam,
   7-aminoclonazepam, 2-hydroxyethylflurazepam,
   and oxazepam at a decision level of 40 ng/mL
   and alpha hydroxyalprazolam at a decision
   level of 20 ng/mL.

Adulterant Decision Limit:
 General Oxidants       200 ug/mL

The adulterant assay tests for General Oxidants,
including Chromates and Nitrites.  Adulterants are
substances either ingested or added directly to a
urine specimen to prevent the detection of drug use.

If applicable, any drug confirmation testing reported
here was developed and the performance characteristics
determined by Warde Medical Laboratory. This
confirmation testing has not been cleared or approved
by the FDA. The laboratory is regulated under CLIA as
qualified to perform high-complexity testing. This test
is used for patient testing purposes. It should not be
regarded as investigational or for research.

Test performed at Warde Medical Laboratory,
300 W. Textile Rd, Ann Arbor, MI  48108     800-876-6522
William G. Finn, MD  - Medical Director

SARS-COV-2 ASYMPTOMATIC PCR SCREEN - Final result (04/04/2022 12:00 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.

This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.

This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.

PR NERVE CONDUCTION STUDIES 9-10 STUDIES, PR NEEDLE EMG EA EXTREMITY W/PARASPINL AREA LIMITED (12/01/2021 5:30 PM EST)

Narrative

.MANUAL ENTRY (EXTERNAL LAB) - 12/01/2021 5:30 PM EST

This result has an attachment that is not available.

Narrative

Kleinman, Michael S, DO 12/1/2021 5:31 PM
EMG & NCV Findings:
Motor conduction studies of the left peroneal nerve recording extensor digitorum brevis demonstrated a severely reduced (nearly absent) response amplitude with stimulation at the ankle. The distal latency is severely prolonged though this is not considered to be technically accurate given how low the response amplitude is.

Motor conduction studies of the left peroneal nerve recording tibialis anterior demonstrates a normal distal latency, moderately reduced response amplitudes and normal conduction velocity across the fibular head.

Motor conduction studies of the left tibial nerve demonstrated a moderately prolonged distal latency, severely reduced response amplitudes and mildly slowed conduction velocity. F-wave minimum latency was moderately prolonged.

Motor conduction studies of the right peroneal nerve recording extensor digitorum brevis demonstrated a severely reduced (nearly absent) response amplitude with stimulation at the ankle.

Motor conduction studies of the right tibial nerve with stimulation at the ankle demonstrated a mildly prolonged distal latency and severely reduced response amplitude.

Motor conduction studies of the left ulnar nerve were normal, including F-wave minimal latency.

The left sural sensory response was absent. Sensory conduction study of the right sural nerve demonstrated a severely reduced response amplitude and moderately slowed conduction velocity.

Sensory conduction study of the left radial nerve was normal.

Concentric needle electromyography (EMG) was performed in selected muscles representing the left L4-S1 myotomes. Mild active denervation with moderate chronic reinnervation and mildly reduced recruitment was seen in tibialis anterior. Severe chronic reinnervation with mildly reduced recruitment was seen in extensor hallucis longus. Mild chronic reinnervation was seen in medial gastrocnemius. Vastus lateralis was normal.

Impression:
Abnormal study. The electrophysiologic data is consistent with a severe axonal generalized sensorimotor polyneuropathy.

Procedure Note

Michael Kleinman, DO - 12/01/2021 5:30 PM EST

Procedure Note

Formatting of this note might be different from the original.

EMG & NCV Findings:

NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.

Narrative

03/26/2021 7:53 PM EDT

Narrative

EXAM: XR CHEST PORTABLE

INDICATION: cough

COMPARISON: None.

TECHNIQUE: Single view of the chest.

FINDINGS:

The lungs are clear. There is no pleural effusion or pneumothorax. Mediastinal contour, hilar contour, heart size and pulmonary vascularity are within normal limits. Visualized osseous structures are unremarkable.

IMPRESSION:

No acute process identified.

This report has been read by David Pozivilko, MD and will be reviewed by the attending radiologist covering this service. 3/26/2021 7:30 PM

I, Brian Livingston, MD have personally reviewed the images and interpretation and agree with the final report. Dictated by David Pozivilko, MD.

SARS-COV-2 ASYMPTOMATIC PCR SCREEN - Final result (09/08/2020 4:25 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

Narrative

```
Bokat, Pamela G, MD     8/26/2020  9:04 AM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 8/26/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 23
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 45 % energy
Pulse Width:0.5
Frequency:45
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 23 seconds and Motor Seizure length
=   seconds

The seizure was Excellent
Significant problem with treatment: No
Procedure Comments: good seizure but briefer

The plan for the next treatment includes : would increase to
0.5/55/8.0.  Per psychiatric assessment, pt reports chronic
passive suicidal ideation without plan or intent.  He reports
that ECT improves his suicidal thoughts and looks forward to
returning in 1.5 weeks.  He has a good support system and
providers and feels safe to go home.
The next treatment is scheduled for 1.5 Week(s)

Muscat, Sarah D, MD 6/12/2020 9:53 AM
ECT PROCEDURE NOTE

Problem List Date Reviewed: 6/12/2020
ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9 2/28/2020

ECT Treatment # 18
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 51 % energy
Pulse Width:0.5
Frequency:45
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 13 seconds and Motor Seizure length = 13 seconds

The seizure was Brief, Adequate
Significant problem with treatment: No
Procedure Comments: Patient did not fall asleep quickly wth 100 of methohexital so gave succ then additional 30 methohexital. Because of this recent bolus his seizure was shorter however was good wave form. As was longer than ten seconds did not want to restimulate

The plan for the next treatment includes : Would use 120 methohexital as initial bolus; HV if possible; succ dose is good, consider slight increase in stimulus dose to 60%
The next treatment is scheduled for 2 Week(s)

Clinically we discussed that he has had a good response to ECT
We will continue with slow taper, plan to continue for six months (began end of 2/20)
Coordinate with his psychiatric provider.

.MANUAL ENTRY (EXTERNAL LAB) - 04/07/2020 11:30 AM EDT
Muscat, Sarah D, MD 4/7/2020 12:04 PM
ECT PROCEDURE NOTE

Problem List Date Reviewed: 4/7/2020
ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9 2/28/2020

ECT Treatment # 10(#3 BT)
Phase: Acute
Electrode Placement: Bitemporal
ECT Settings: 28 % energy
Pulse Width:0.5
Frequency:40
Duration:5 seconds
Amplitude:800

Seizure Length: EEG length = 41 seconds and Motor Seizure length
= 22 seconds

The seizure was Excellent
Significant problem with treatment:
Procedure Comments: good seizure

The plan for the next treatment includes : same
The next treatment is scheduled for 3 Days

US GUIDED LIVER BIOPSY - Final result (04/03/2015 11:53 AM EDT)

Anatomical Region	Laterality	Modality
Abdomen		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			04/03/2015 10:00 AM EDT	

Narrative

04/06/2015 8:05 AM EDT

EXAM: ULTRASOUND-GUIDED PERCUTANEOUS RANDOM CORE LIVER BIOPSY

INDICATION: Ultrasound-guided liver biopsy requested. Reactive arthritis. Elevated ALT, AST. Evaluate for hemochromatosis with quantitative iron evaluation as well.

COMPARISON: Ultrasound 12/23/14.

FINDINGS: Identification and procedure time out were performed. Signed informed consent was obtained.

The biopsy was performed by Dr. Winn with Dr. Brian Alan Perry.

An oblique right intercostal approach was selected. Realtime ultrasound guidance was used throughout the procedure. Standard sterile preparation and technique were employed. Local anesthesia was obtained with infusion of 1% lidocaine solution. A
biopsy was performed with coaxial technique with the need for multiple core specimens for the diagnostic testing requested, per discussion with the Pathology department prior to the procedure. With realtime ultrasound guidance, a 17-gauge introducer
needle was placed into the right lobe of the liver. A biopsy was performed through that with an 18-gauge spring loaded automatic core biopsy needle. Two separate 2 cm long cores were obtained. These were placed together in a single container of
formalin and submitted for histopathologic evaluation and quantitative iron evaluation. The biopsy needle was removed and stylet was placed within the coaxial needle. After approximately 3 minutes the stylet was removed and revealed no bleeding through
the coaxial needle. The coaxial needle was then removed. Postbiopsy imaging showed no evidence of hemorrhage or immediate perihepatic hematoma.

The site was cleansed and a band-aid was applied. The patient was placed in right lateral decubitus recumbency and brought to the radiology nursing area for postbiopsy observation with orders placed in the electronic medical record. Specimen was
submitted for diagnostic testing as ordered.

IMPRESSION: Ultrasound-guided percutaneous random core liver biopsy performed. Details above.

Narrative

SERVICES PROVIDED BY NORDX LABORATORY - 04/07/2015 3:52 PM EDT

Narrative

CASE: SS-15-08090
PATIENT: WILLIAM SERETTA

SPECIMEN: A. RT LOBE LIVER BX Client: RADO

FINAL DIAGNOSIS:

Liver, right lobe, needle core biopsy: Steatohepatitis with early zone 3 fibrosis.
- Kleiner NAS score including:
Steatosis: 2/3.
Lobular inflammation: 1/3.
Ballooning degeneration: 1/2.
- Fibrosis: 1A.
DMD/cbp 4/6/2015

COMMENT:

The biopsy is adequate and shows an active steatohepatitis. Bile ducts appear intact. Etiological considerations would alcohol and the various causes of non-alcoholic fatty liver disease. The Kleiner activity score and fibrosis are provided. A reticulin stain highlights non-neoplastic hepatic plate architecture with focal areas of collapse. An iron stain is focally positive within the Kupffer cells. There is no hepatocyte or bile duct accumulation of iron. The iron does not appear increased significantly. Serologic iron testing may be influenced by the steatohepatitis identified. No prominent intracytoplasmic globules are identified on PAS/PAS-D stains. A trichrome stain shows a pattern of fibrosis limited to the zone 3.

CLINICAL HISTORY: 27-year-old male with reactive arthritis and elevated AST/ALT. Evaluate for hemochromatosis.

GROSS DESCRIPTION:

The specimen is received in formalin labeled William B. Seretta and consists of five tan cores of tissue ranging from 0.5 to 1.7 cm in length and each measuring 0.1 cm in diameter. (5NS) (1 cassette)

Discharge Instructions - documented in this encounter

Discharge Instructions

Joshua Rehberg, MD - 08/07/2026 9:27 PM EDT

Formatting of this note might be different from the original.

You are seen in the emergency department today for repeat lithium level draw. Your lithium level continues to improve and we are not seeing any toxic side effects on your kidneys. Please hold your lithium for 2 days and follow-up on Monday for repeat lithium level and chemistry panel at a Nordic's lab. Please call your prescribing physician Dr. Ness for further management of your lithium dosing.

Electronically signed by Joshua Rehberg, MD at 08/07/2026 9:28 PM EDT

•	Abnormal Labs

[Chief Complaint](EpicACT:ED_MD_VISIT_REVIEW,RunparamsURLEncoded:TEMPLATE=T_ED_MD_REVIEW%2CSTARTUPSECTION=CC): Abnormal lithium level

I saw this patient primarily. I have seen and examined the patient myself and am responsible for the care plan.

HPI

History of Present Illness
William B Seretta is a 39 year old male with bipolar disorder on lithium who presents for evaluation of an elevated lithium level. He was referred by Dr. Emily Ness for evaluation of an elevated lithium level.

He had outpatient blood work drawn yesterday before a scheduled appointment with his lithium prescriber. Around 4 AM today he was notified that his lithium level was high and came to the ED instead of attending that appointment. He denies recent lithium dose changes or extra doses.

He feels well without symptoms and notes no change from earlier today. He wonders if dehydration from poor heat tolerance may have contributed.

Assessment and Plan

Medical Decision Making
39-year-old male with history of lithium use presented with elevated lithium level, now normalized to 1.4 mmol/L. Reviewed ED visit from earlier today as linked in the HPI. No acute symptoms or renal impairment.

Elevated lithium level
Hold lithium for two days per Dr. Ness. Ordered lithium level and BMP for lab collect on upcoming Monday. Recommended patient stay well hydrated. Contact Dr. Ness for any additional dosing adjustments after labs have resulted. Discharged from ED.

eGFRcr Male (CKD-EPI 2021)	81	>60 mL/min/1.73m*2		08/07/2026 8:41 PM EDT	NORDX MMC CAMPUS	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Comment:						

Please note that as of 6/24/2025 eGFRcr calculation is updated and reported based on the CKD-EPI 2021 equation using blood creatinine levels. The new eGFRcr equation has similar overall performance characteristics to the older equations. Estimated GFR values have limitations and need to be interpreted based on clinical context.
National Kidney Foundation guidelines recommend ordering cystatin C as a confirmatory test for patients with eGFRcr of 45-59 mL/min/1.73m2 with urine albumin-creatinine ratio <30 mg/g, and in patients for whom the creatinine may be a less reliable indicator of GFR near decision points.
See NorDx Test Catalog for more information.

ED Notes - documented in this encounter

Meghan McNally, PA - 08/07/2026 4:14 PM EDT

Formatting of this note might be different from the original.

Received a call from the lab about this patient's critical lithium level. He did leave earlier today AGAINST MEDICAL ADVICE however his plan is to come back around 8 PM for repeat lab draw and additional hydration. Still has no symptoms. Did discuss his continued abnormal lithium level and he is aware. He will return.

McNally, Meghan B, PA
08/07/26 1839

Cosigned by Rachel Williams, MD at 08/07/2026 6:53 PM EDT
Electronically signed by Meghan McNally, PA at 08/07/2026 6:39 PM EDT
Electronically signed by Rachel Williams, MD at 08/07/2026 6:53 PM EDT

Sarah, RN - 08/07/2026 4:11 PM EDT

Formatting of this note might be different from the original.

Pt spoke with Dr. Pappalardo, leaving AMA and will return at 2000 for repeat labs. AMA form signed by pt w/Dr. Pappalardo. PIV removed per protocol. Self ambulated to ED entrance with steady gait without incident.

Electronically signed by Sarah, RN at 08/07/2026 4:13 PM EDT

**[Chief Complaint]
(EpicACT:ED_MD_VISIT_REVIEW,RunparamsURLEncoded:TEMPLATE=T_ED_MD_REVIEW%2CSTARTUPSECTION=CC):** Elevated Lithium level

I saw this patient with the resident physician Dr. Pappalardo. I have seen and examined the patient myself and am responsible for the care plan.

HPI

This is a 39 y.o. male who presents at the direction of his psychiatrist for an elevated lithium level. Patient takes 1050 mg of lithium daily. Yesterday he had testing for his lithium level, which came back at 1.8. The night prior he had taken his lithium around 11 PM, and the test was drawn at 10:30 AM yesterday. He got a call from his psychiatrist this morning telling him to go to the emergency department for further evaluation. Patient denies any vomiting, diarrhea, abdominal pain, tremors, difficulty with coordination. Review of his chart shows that his typical creatinine is around 0.9 (last value drawn on 12/2025). He has not had any recent GI illnesses with vomiting or diarrhea. He says he drinks about a glass of water daily. He says he has been exercising more than usual, but not substantially so. He denies any attempt at self-harm. Has not taken any extra doses of lithium other than what has been prescribed. In February he was decreased in his dose from 1200 mg to 1050 mg because of a slightly elevated lithium level. No dose changes since then. He did recently start on guanfacine.

Regards to newer symptoms this week, he has had increased eye dryness and fatigue in the morning.

[Telephone Encounter by Ness, Emily J, MD (08/07/2026 10:29)](epic:EPIC?REPORT&RDL_REPORT&Z765841!206;0!Notes^1^2680155413)
If level is decreased or stable, would recommend discontinuation of lithium x 2 days, and CMP within normal limits, with repeat level obtained on Sunday or Monday to re-assess. Recommend increasing hydration as well. If level is increased or patient presents with lab abnormalities or symptoms of toxicity, recommend discontinuing lithium and further monitoring/workup as indicated.

MDM (Assessment and Plan, ED Course, and Disposition)

Assessment and Plan

This is a 39 y.o. male who presents with elevated lithium level to 1.8 yesterday. Patient not having any symptoms or physical exam findings of acute lithium toxicity. No recent GI illnesses or decrease in oral intake. Has been working out more and has been particularly hot lately. Will repeat lithium level and CMP. If elevated, can discuss with Poison Control Center. Further treatment and dispo pending lithium level. 11:20 EDT

[table#10]:
ED Course as of 08/07/26 1626
Fri Aug 07, 2026
1130	EKG sinus rhythm, QTc 403, no significant changes from prior, per my depend interpretation. [JB]
1320	**Creatinine(!): 1.33**
AKI [FP]
1426	Lithium 1.9 [JB]
1501	Spoke with poison control. Recommending 2 L of normal saline. Recommending repeat BMP and lithium every 4 hours. Next BMP and lithium timed for 1600. Requesting additional BMP and lithium at 2000. [FP]
1520	I was informed that patient is willing to stay for the IV fluids and the repeat blood work at 1600, but he says he is going to leave and come back at 2000 for his next set of labs. This is AGAINST MEDICAL ADVICE. Will have him sign the AMA form, though obviously will encourage him to come back for repeat blood work. [FP]

Calcium	9.2	8.5 - 10.2 mg/dL		08/07/2026 4:33 PM EDT	NORDX MMC CAMPUS	

Comment:

Please note that as of 6/24/2025 eGFRcr calculation is updated and reported based on the CKD-EPI 2021 equation using blood creatinine levels. The new eGFRcr equation has similar overall performance characteristics to the older equations. Estimated GFR values have limitations and need to be interpreted based on clinical context.
National Kidney Foundation guidelines recommend ordering cystatin C as a confirmatory test for patients with eGFRcr of 45-59 mL/min/1.73m2 with urine albumin-creatinine ratio <30 mg/g, and in patients for whom the creatinine may be a less reliable indicator of GFR near decision points.
See NorDx Test Catalog for more information.

[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	PTSD (post-traumatic stress disorder)	
3.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt in preparation for trip to New Jersey with his parents for a family reunion. Pt states his best strategy to avoid extreme anxiety is to keep a low profile. Writer and pt discuss some of the scripts we worked on last week to keep update/future plans conversations short, honest and upbeat. Pt states even the simple scripts are difficult, trigger embarrassment/shame. Writer and pt discussed coping strategies for acute anxiety (deep breathing, 5 finger breathing, 5 senses grounding, time-outs) and the practicing of scripts that "feel good" or "right". Pt would like to discuss his symptoms and diagnoses next session after trip.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: stress about trip with family, coping strategies, symptoms and diagnoses
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	PTSD (post-traumatic stress disorder)	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports just getting back from 3 days alone at camp which was wonderful. Pt states he notices that being away from people, not just his parents, reduces his anxiety drastically. Pt states he slept 3 nights in a row which he has not experienced in years. Now back at home he is back to being a nervous wreck, noticing his anxiety started to worsen after his dog Enzo died and stopping benzo back in 2025.Writer and pt discuss concepts of EMDR treatment again, pt will research and discuss with writer next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation

INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	
3.	Attention deficit hyperactivity disorder (ADHD), unspecified ADHD type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports his parents have been away for the week and his mood has been good up till now. Pt states he is now experiencing anticipatory anxiety about his parent's return. Pt worries greatly, every day, about parents financial insecurity and what kind of future can he plan for. Pt reports that has not been able to get his script for Symponi which treats his Ankylosing Spondylitis which has made it more miserable for him even when his parents are away. Pt has been notified he can pick up script tomorrow. Writer and pt discuss attempting to let go of things he cannot control, focus on self care routines and the here and now with self compassion and gratitude. Pt stated he would try.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: depression/anxiety sxs, med problems and pain,worries about future, coping strategies
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary

Electronically signed by Charles, LCSW at 07/19/2026 9:33 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	
3.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports spending more time outside, often working with parents in outside house projects. Pt states he has been enjoying World Cup Games, has watched a few with his father which has been a form of bonding experience. Pt worried about his agreeing to a 5 day trip with parents to N.J at end of July for a family reunion at a cottage on the shore. Pt has anticipatory anxiety about seeing cousins and relatives and facing questions about what he has been doing and future plans which brings feelings of shame and his wanting to flee or just making something up. Writer and pt discuss potential scripts he can develop to share with friends/family which are simple honest and short to allow pt to focus on the here and now participation in the family reunion activities. Pt will work on some scripts to bring to next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content:
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness.

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987

MR#: E765841
Age: 39 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "I'm okay, I've been identifying some of my patterns"

HPI: William B Seretta is a 39 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Last seen 5/14/26 at which point no medication changes were made

- William reports he is doing "okay". Has been working with therapist Charles Morris to identify and accept some of his mood changes. Notices several days of feeling more motivated and less depressed followed by days where he struggles w/ feeling more down
- Acceptance of this pattern has been helpful for him to moderate his expectations about what he is able to achieve on a given day -still struggles with anxiety and guilt around past actions and inability to accomplish tasks. Feels he cannot relax or enjoy downtime
- does not notice benefit from hydroxyzine, despite taking it somewhat regularly. Encouraged discontinuation if not working as an anxiety PRN
- encouraged to get labwork to follow up on Lithium level
- spending more time outside
- discuss starting guanfacine for anxiety and adhd symptoms. Discouraged daily hydroxyzine use with this med change. R/b/se discussed

Psychiatric Review Of Systems:
Sleep changes: inconsistent
Appetite changes: denies
Energy changes: intermittently low
Overwhelming Anxiety: yes
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal
Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia

•	Lyme arthritis (CMS/HCC,HHS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

**Psychiatric Specialty Exam: **

Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "okay, up and down"
Affect: anxious
Thought process: circumstantial
Associations: logical
Thought content: no evidence of suicidal ideation, homicidal ideation, or psychosis
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: good
Judgment: good

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278
A1c 4.8
5/9/25
AST 32, ALT 31

12/10/25
TSH: WNL
CMP: WNL , AST: 34, ALT: 27

2/26/26: Lithium level: 1.1

UDS:
8/14/24: positive for amphetamine, THC

Data Reviewed:
Pertinent aspects of chart reviewed

Assessment and Plan:

William B Seretta is a 39 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to mania and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (
e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

Treatment progress: William has had periods of improved depression, but largely struggles with low mood and motivation and anxiety. Working with Charles Morris in therapy has been very beneficial. Impairment in occupational functioning- has not been working due to symptoms. Started on guanfacine for anxiety/adhd.

**6/25/26: **reports identifying pattern where his mood cycles from feeling more or less motivated and down. Has been working in therapy to accept these changes and modify behaviors and expectations accordingly. Making positive changes to exercise and self

care. Encouraged to obtain repeat lithium level due to recent decrease in dose. Endorses difficulty with relaxation and ongoing anxiety, along with chronic struggles wit executive function. Discuss starting guanfacine for anxiety and adhd. Encouraged using hydroxyzine sparingly with this medication addition.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 1050 mg nightly
- **Repeat level ordered, encouraged to obtain **
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW
- Consider vocational services referral in the future

#Anxiety
- Hydroxyzine 25mg BID PRN as needed, encouraged to use sparingly with addition of guanfacine
- **Start Guanfacine 1mg nightly for ADHD and anxiety**
- Sent resources about CBT, William to discuss further with Charles
- Encouraged cardio exercise, good sleep hygiene
- Discussed mindfulness exercises and coping strategies

#ADHD
- Patient currently on Adderall 30 mg BID PRN through his PCP
- Counseled on risks of adderall use including on depression, sleep, anxiety, psychosis, and mania
- MI
- **Start Guanfacine 1mg nightly for ADHD and anxiety**
** **
#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
**#Transaminitis **
#Hypothyroidism
#Hyperlipidemia
- Coord
inate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyroxine, lisinopril through PCP
- Takes B12 and multivitamin, discussed omega 3/fish oil supplementation

#Health Maintenance/Administrative
- Ongoing follow up with PCP as needed
- ROI: signed for patient's former psychiatrist, Dr. Abernathy, patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
- AIMS: n/a
- Labs:** repeat Li level ordered. **2/26/26: Lithium level 1.1 (dose decreased), 12/2025: TSH WNL, CMP WNL
- BMI: weight- 235lb as of 03/2024
- Consents: signed for hydroxyzine (9/11/25)
- Treatment plan: valid through 3/11/26
- UDS: n/a
- Controlled substance agreement: n/a
- Last preceptor clinic: 5/14/26 w/ Dr. Katie Joy Zimmerman-Winslow

RTC: 3-4 weeks

Emily J Ness, MD
06/25/26

** **Portions of this note have been carried forward from My prior documentation on 5/14/26. All information copied forward has been reviewed, verified, and updated to accurately reflect the patient's current condition, examination findings, and plan of care for today's encounter.** **

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Generalized anxiety disorder	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has been able to do a lot of projects with his parents during the last 2 weeks. Pt states he has felt more comfortable about expressing his thoughts and expectations with parents without fear of feeling shut down. Pt states that the important thing for him is to regain his confidence by gaining more control of his environment and feeling like he is contributing to helping others and his household. Writer and pt discuss his ADHD and OCD sxs which contribute to perfectionism and procrastination. Pt and writer agree on new treatment goal of increasing pt's tolerance for acceptance of some level of imperfection (95 % OK) as the opportunity cost of completing life's tasks to a "satisfactory" state.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: working more with parents, importance of building confidence, increasing tolerance for imperfection, stable mood/functioning
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary

Electronically signed by Charles, LCSW at 07/01/2026 9:37 AM EDT

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 06/15/2026 6:05 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	
3.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he was able to enjoy another weekend while his parents were away: organized the shed, bicycling, cooking, being his spontaneous self. Pt states that his mood shifted upon anticipation of his parents getting home (6 hours previously). Pt states that he is able to manage this disappointment better bu it is still difficult. Writer and pt discuss the rewards of being able to stay in the present with gratitude and appreciation while also accepting that which we have no control over. Pt states he understand but parts of the things he seems to not control are his thoughts and OCD behaviors and wants to focus on this next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mild anxiety
Thought Form: logical and coherent
Thought Content: stable mood/functioning, would like to work on OCD thoughts/behaviors
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness.

Electronically signed by Charles, LCSW at 06/17/2026 6:17 PM EDT

Charles, LCSW - 06/04/2026 3:59 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Generalized anxiety disorder	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he had a productive week, learning again how much he loves customizing things. Pt states he is spending a lot more time outside, initiated 5 mile bike ride, yard work, cleaning car. Writer and pt discussed pt's conditioned response and cognitive distortion about recreational activity as wasteful or that he should feel embarrassed or ashamed for taking time for himself because he has to make-up for the "burden" of being taken care of by his parents for the last 10 years. Discussed future oriented narratives that combine acceptance and self compassion about having MI and what he can do for himself and his family going forward. Pt in agreement, will work more on narratives.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: mild depression/anxiety sxs, increased outdoor activities, cognitive distortions and positive narratives
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he had a very productive week, enjoyed 72 hours of freedom after parents went up to their camp. Pt states that "I has 72 hours of feeling myself, able to organize but also enjoy the outside, nature biking and especially cooking". Pt reports that when his parents returned so did the cautionary over-thinking. However, pt reports that he is more comfortable now in their house, feels that parents are more appreciative of his efforts even when he doesn't ask their permission.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: independence and feeling himself when parents away, improved mood/functioning
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Generalized anxiety disorder	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he was able to extend and pro-long positive energy into Friday/Saturday this week. Pt states he is still not sleeping as much as he should (4-5 hrs/night), overdid yard-work and had to rest in bed Sunday and Monday. Pt states his challenge has always been finding a moderate way to sustain personal enjoyment, productivity and self-esteem without losing sleep or putting himself at some kind of physical risk. Pt able to detail his car and ride his new bike last week but could not limit his over-using his extra energy and then crashing physically. Writer and pt discuss concept of "hedonic adaption", trying to find the equilibrium which can moderate the ups and downs and increasing ability to accept opportunity costs, develop self-compassion and increase self-esteem. Pt would like to work more on this concept and will research topic for discussion next week.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: Bipolar mood swings which are stable, good functioning, sleep issues,
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.

Electronically signed by Charles, LCSW at 05/28/2026 8:53 AM EDT

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 39 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "I'm okay, I've been identifying some of my patterns"

HPI: William B Seretta is a 39 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Last seen 3/18/26 at which point Lithium was reduced due to level of 1.1. Visit precepted by Dr. Katie Joy Zimmerman-Winslow

- William reports he is doing "okay". Has been working with therapist Charles Morris to identify and accept some of his mood changes. Notices several days of feeling more motivated and less depressed followed by days where he struggles w/ feeling more down
- Acceptance of this pattern has been helpful for him to moderate his expectations about what he is able to achieve on a given day
- Dereased lithium back to 1050mg, encouraged to get labwork to follow up on Lithium level
- denies side effects from lithium or other medications
- endorses ongoing consistency with eating more nutritious foods
- sleep remains inconsistent w/ struggling to sleep on days where he feels less motivated. Spending a lot of time in bed on these days which could be contributing
- recently bought a mountain bike and is excited to be more active
- discuss no medication changes

Psychiatric Review Of Systems:
Sleep changes: inconsistent
Appetite changes: denies
Energy changes: intermittently low
Overwhelming Anxiety: yes, improving
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:

**Psychiatric Specialty Exam: **
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "okay, up and down"
Affect: constricted, anxious
Thought process: linear, circumstantial at times
Associations: logical
Thought content: no evidence of suicidal ideation, homicidal ideation, or psychosis
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: good
Judgment: good

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278
A1c 4.8
5/9/25

Data Reviewed:
Epic reviewed

Assessment and Plan:
[table#4]:
Problem List Items Addressed This Visit
None

William B Seretta is a 39 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to mania and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of De pakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

Treatment progress: William has had periods of improved depression, but largely struggles with low mood and motivation and anxiety. Working with Charles Morris in therapy has been very beneficial. Impairment in occupational functioning- has not been working due to symptoms.

**5/14/26: **reports identifying pattern where his mood cycles from feeling more or less motivated and down. Has been working in therapy to accept these changes and modify behaviors and expectations accordingly. Feeling hopeful about this. Making positive changes to diet, exercise and self care. Encouraged to obtain repeat lithium level due to recent decrease in dose. No medication changes.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 1050 mg nightly
- **Repeat level ordered **
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW
- Consider vocational services referral in the future

#Anxiety
- Sent resources about CBT, William to discuss further with Charles
- Encouraged cardio exercise, good sleep hygiene
- Discussed mindfulness exercises and coping strategies
- Consider addition of propranolol vs. gabapentin for anxiety if indicated (hydroxyzine ineffective)

#ADHD
- Patient currently on Adderall 30 mg BID PRN through his PCP
- Counseled on risks of adderall use including on depression, sleep, anxiety, psychosis, and mania
- MI
** **
#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
**#Transaminitis **
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro

- On levothyroxine, lisinopril through PCP
- Takes B12 and multivitamin, discussed omega 3/fish oil supplem
entation

#Health Maintenance/Administrative
- Ongoing follow up with PCP as needed
- ROI: signed for patient's former psychiatrist, Dr. Abernathy, patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
- AIMS: n/a
- Labs:** repeat Li level ordered. **2/26/26: Lithium level 1.1 (dose decreased), 12/2025: TSH WNL, CMP WNL
- BMI: weight- 235lb as of 03/2024
- Consents: signed for hydroxyzine (9/11/25)
- Treatment plan: valid through 3/11/26
- UDS: n/a
- Controlled substance agreement: n/a
- Last preceptor clinic: 5/14/26 w/ Dr. Katie Joy Zimmerman-Winslow

RTC: 6-8 weeks

Emily J Ness, MD

Formatting of this note might be different from the original.
I have personally seen and examined this patient, read the above resident note, and agree with the resident's findings, impression and recommendations.

In addition, I note that I agree with Dr. Ness's medication plan including decrease in lithium level given elevation and plan to follow up after completed. Patient appears to be stable in terms of symptoms of mania and depression and is actively engaged in individual therapy.

Katie-Joy Zimmerman-Winslow, DO

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Generalized anxiety disorder	
3.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports he met with Dr Ness this morning which went well and that his mood has improved. Pt states he has continued with his tasks/goals this past week including buying a bike which has taken about 3 months of investigation before purchasing. In addition pt has finished organizing the basement, making preparations to move bedroom there. Discussion of pt's up and down cycles and moderating both with self-care tasks in order to be able to enjoy recreation, like biking, without feeling guilty while also being productive for the household.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content:Dr Ness appt, improved mood/funtioning
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

**PRESENTATION *(include relevant medication, substance use and mental status observations)*: **Pt reports "I can tell the shift to the up mood is when I choose to put headphones on or use Play Station". Pt states he has difficulty inside the window between up and down mood where he becomes more anxious and often physically pacing. However, pt says he has been experiencing more confidence and a sense of accomplishment by following through on his tasks and goals. Pt reports that he cleaned and organized the basement of his house which tool over 20 hrs but was very satisfying. After accomplishing this pt feels he can go out today and go golfing or the driving range and plans to do so after session today. Pt acknowledges down mood over weekend but because it was predictable and no surprise it was OK. Writer and pt discuss moderating the number of tasks/goals during up mood and increasing by a little his activities during down mood mood to broaden his feelings of confidence and accomplishment while also experiencing more rest and less depression. Pt in agreement.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: Up and down moods, stable functioning, experiencing more confidence and accomplishment with following through on tasks
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness.

Electronically signed by Charles, LCSW at 05/11/2026 3:07 PM EDT

Progress Notes - documented in this encounter

Charles, LCSW - 04/30/2026 3:58 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **
CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he is noticing his cycles are about 6-8 days, weekends are down cycle, Tues-Wed-Th positive up cycle which then plateaus and cycles then repeat. Pt reports that the problem with the up cycle ("window of opportunity") is he forces all his tasks and goals into these 3 days and ends up hardly sleeping but a few hours a night which leaves him exhausted for the weekend. Writer and pt discuss his progress in identifying his cycles and noticing how consistent they are and how each one effects him. Exploration of pros/cons of each and how, without changing the cycles, each may have potential for allowing him to set more realistic goals in up cycle while also allowing him rest and in addition allowing him to relax and not feel guilty during down cycle, playing video games or visiting friends during times he already knows he isn't expecting to be productive. Pt intends to try this perspective this coming week.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: noticing mood cycles, sleep disruption, coping techniques
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.

Electronically signed by Charles, LCSW at 05/04/2026 5:46 PM EDT

Progress Notes - documented in this encounter

Charles, LCSW - 04/29/2026 7:53 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Generalized anxiety disorder	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports "Im OK, plugging along". Pt states he is trying to take advantage of his windows of opportunity (feels his mood cycle is 7 days M-TH upbeat, F-Sun down), went out with a friend, had a few beers and did not feel guilty. Pt states he is attempting to take control of what he has control over (immediate environment) and letting go of negative potential thoughts/judgements of others.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: slightly anxious
Thought Form: logical and coherent
Thought Content: stable mood/functioning, insight into mood cycling
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.

Electronically signed by Charles, LCSW at 04/29/2026 8:41 PM EDT

Answer	Entry Date	Author	Status
Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 04/20/2026 2:45 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports re-organizing the basement to establish a domiciliary for himself in his parent's house. Pt continues to be intimidated by his negative reaction of his father's brooding presence (pt's perception). Pt states he has been staying up at night for years because it is the only time when he feels comfortable to be around the house. Pt states he is feeling better since last week, focusing on things he can have control over , using his "streaks" app to manage his tasks and progress towards goals.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: improved mood/functioning
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness

Electronically signed by Charles, LCSW at 04/20/2026 3:55 PM EDT

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 04/10/2026 2:20 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Generalized anxiety disorder	

| 3. | Attention deficit hyperactivity disorder (ADHD), combined type | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports from the basement in his home, concerned about his confidentiality. Pt states that he understands suddenly that he has been harboring a lot of animosity towards his father. Pt states that he and his mother have been subject to his father's anger and verbal abuse since he was young, that pt has been aware of father's infidelities over time and recently making a terrible business decision that has put their family house at risk. Writer and pt discuss pt's family dynamics, parallel with the effect of attempting to tip-toe around an alcoholic who does not think he has a problems and is unaccountable for his behaviors. This sudden realization has occurred after pt's chronic exposure and will be subject of ongoing treatment sessions.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: irritated
Thought Form: logical and coherent
Thought Content: anger towards father, sxs of depression and anxiety
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine. Please note that PO Box addresses do not allow for emergency response if needed.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 04/13/2026 11:42 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	
3.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he continues journaling in an attempt to make sense of all his experiences. Pt states that he has noticed a "shifting" cycles, from hypomanic to depressed, understanding when he is in these cycles he has a limited time to be "focused" and "motivated" before arbitrarily going back to depressed and anxious. Writer and pt discuss the "acceptance" of cycles and the goal to stabilize mood and behaviors while maximizing routine pleasures and accomplishments. Pt feels proud of ability recently to get tasks done, allows him to feel that he has "earned" his right to have recreational interests without feeling guilty or possibly judged by his parents and others.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: stable mood/functioning, insight into experience of cycles and acceptance of his disorder.
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with

Progress Notes - documented in this encounter

Charles, LCSW - 03/30/2026 2:55 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Generalized anxiety disorder	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that 2 days ago he was in really rough shape but is feeling better, had a spike in anxiety. Pt states that he sees these mood disruptions as repeated cycles and has recognized this through journaling more consistently and also recognizing progress rather than perfection. Writer and pt discuss boundaries with ourselves, attempting to find an ability to accept or let go of things we do not have control over and focus on the things we can control in order to manage anxiety.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: anxiety and depressive sxs, journaling,coping skills
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine. Please note that PO Box addresses do not allow for emergency response if needed.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Progress Notes - documented in this encounter

Charles, LCSW - 03/19/2026 3:00 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **
CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports still feeling ill physically, doing better. Pt states he feels anxious and depressed but using the "streaks" app to gain more confidence following through on tasks and self-care routines. Writer and pt discuss the mindfulness aspect of needing to do one task at a time until it is done, not attempting to mult-task or over-think too many tasks which causes feelings of being overwhelmed or paralyzed.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: mild anxiety/depression sxs, confidence-building and mindfulness tasks
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine. Please note that PO Box addresses do not allow for emergency response if needed.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 03/24/2026 2:35 PM EDT

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 38 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "I've been making some changes"

HPI: William B Seretta is a 38 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Last seen 2/5/26 at which point Lithium was increased to target worsening of depression.

- William reports he is doing slightly better with change in weather but still reports remaining "consistently depressed"
- Did not notice change with increase in lithium, discuss decreasing to 1050mg due to level of 1.1
- denies side effects from lithium or medications
- continues to work with Charles Morris in therapy
- endorses sleep has become more consistent
- working on eating healthier and adding exercise to routine. Adding structure through journaling daily and personal hygiene
- anxiety remains high related to social situations and anxiety surrounding low motivation to get things done, even "basic" things like showering
- started to connect with online community regarding bipolar and social anxiety symptoms which has provided him some comfort
- endorses he is still in a "much better place" compared to one year ago, proud of his progress and trying to change mindset around expectations.

Psychiatric Review Of Systems:
Sleep changes: improving
Appetite changes: denies
Energy changes: low
Overwhelming Anxiety: yes
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no

Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache
•	Seroquel [Quetiapine]	Other (See Comments)
		Higher dose? Increased LFT's

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	lamoTRIgine (LAMICTAL)	200 mg, Oral, Daily
•	levoTHYROxine (SYNTHROID, LEVOXYL)	50 mcg, Oral, Every morning
•	lisinopril	10 mg, Oral, Daily
•	lithium	1,200 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.
•	traZODone (DESYREL)	50 mg, Oral, Nightly PRN

Taken as prescribed: Yes
Medication response: fair
Side effects: none
Prescription Monitoring Program checked today: Yes

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC,HHS/HCC)
•	Bipolar 1 disorder (CMS/HCC,HHS/HCC)
•	Lyme arthritis (CMS/HCC,HHS/HCC)

•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

**Psychiatric Specialty Exam: **
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "consistently depressed"
Affect: constricted, anxious
Thought process: linear, circumstantial at times
Associations: logical
Thought content: no evidence of suicidal ideation, homicidal ideation, or psychosis
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: good
Judgment: good

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278
A1c 4.8
5/9/25
AST 32, ALT 31

12/10/25
Lithium level: 0.7
TSH: WNL
CMP: WNL , AST: 34, ALT: 27

2/26/26: Lithium level: 1.1

UDS:
8/14/24: positive for amphetamine, THC

Data Reviewed:
Epic reviewed

Assessment and Plan:
[table#4]:
Problem List Items Addressed This Visit
None

William B Seretta is a 38 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to mania and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully asc
ertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence

that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

**3/18/26: **reports ongoing depression with some improvement with recent change in weather. Denies side effects or large improvement from increase in lithium- disucss reducing due to level of 1.1. ongoing therapy with Charles Morris. Making positive changes to diet, exercise and self care. Sleep improving. Could consider addition of alternative anxiolytic in future if ongoing significant anxiety despite engagement in therapy and lifestyle changes. hydroxyzine ineffective in past.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- **Decrease lithium to 1050 mg nightly due to level of 1.1**
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW
- Consider vocational services referral in the future

#Anxiety
- Sent resources about CBT, William to discuss further with Charles
- Encouraged cardio exercise, good sleep hygiene
- Discussed mindfulness exercises and coping strategies
- **Consider addition of propranolol vs. gabapentin for anxiety (hydroxyzine ineffective)**

#ADHD
- Patient currently on Adderall 30 mg BID PRN through his PCP
- Counseled on risks of adderall use including on depression, sleep, anxiety, psychosis, and mania
- MI
** **
#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
**#Transaminitis **
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyroxine, lisinopril through PCP
- Takes B12 and multivitamin, discussed omega 3/fish oil supplementation

#Health Maintenance/Administrative
- Ongoing follow up with PCP as needed
- ROI: signed for patient's former psychiatrist, Dr. Abernathy, patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
- AIMS: n/a
- Labs:** 2/26/26: Lithium level 1.1 (dose decreased)**, 12/2025: TSH WNL, CMP WNL
- BMI: weight- 235lb as of 03/2024
- Consents: signed for hydroxyzine (9/11/25)
-
Treatment plan: valid through 3/11/26
- UDS: n/a
- Controlled substance agreement: n/a
- Last preceptor clinic: 9/11/25 w/ Dr. Price

RTC: 5-6 weeks

Emily J Ness, MD

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that using "Streaks" app has been very useful in holding himself accountable and logging data regarding tasks. Pt states that in addition his participating in Bipolar Chats has allowed him to not feel alone with mental health and substance abuse diagnoses. Currently pt states his mood has improved, is attempting to focus on his diet decisions, making a big smoothie each day which seems to have increased his energy. Writer and pt discus how streaks app has been a great CBT tool to allow pt to sustain behavior changes.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: pleasant
Thought Form: logical and coherent
Thought Content: improved mood, making positive behavioral changes
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine. Please note that PO Box addresses do not allow for emergency response if needed.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 03/18/2026 7:48 AM EDT

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 02/19/2026 3:49 PM EST

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports he is still getting over physical illness, is still congested. Pt states he is attempting to use his compulsive thoughts about being "productive" as opportunities to change his thoughts/behaviors/expectations about himself and others. Pt reports that he is trying to eat better and using "streaks" app which helps him with follow-through on new behaviors. Pt reports improved mood, increased motivation.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: euthymic
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: using some CBT coping strategies/apps , improved mood.
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 03/08/2026 10:47 PM EDT

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Generalized anxiety disorder	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports being physically ill since last Sunday after attending a super-bowl event, has not been sleeping well. Pt states he has become more anxious about parents financial status after pt's father stepped-down from leadership of a non-profit business which was facing foreclosure. Pt also struggling with OCD sensitivity around parent's physical hygiene habits which he has no control over but effects him. Writer and pt discuss boundary issues with parents, normal conflicts among adult household members hygiene habits, anxiety and OCD and coping strategies (taking control over his own environment, expressing his concern regarding hygiene of shared living areas of house, grounding techniques, distraction tools [fidgets], relaxation techniques [body scans, progressive relaxation] and finding and practicing self-help routines that are self-validating and healthy. Writer and pt also discuss briefly ACT theory and asked pt to do some research on topic to discuss next session. Pt in agreement.

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	

| 3. | Attention deficit hyperactivity disorder (ADHD), combined type | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he saw Dr Ness today with no changes.Pt states he has increased guilt, fear, shame about his life for last 13 years, believes that he is responsible for not being financially independent and not being able to help his parents in their retirement stress. Writer and pt discuss his understanding of the severity of his MH diagnoses,symptoms and the usefulness of blaming himself for his symptoms and difficulties. Acceptance of his medical condition could possibly allow for grief/loss process of past while allowing a future-oriented embrace of opportunities that exist going forward. We will discuss further next session.
Speech: Normal
Cognition Consciousness: Alert

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 38 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "I'm depressed as ever"

HPI: William B Seretta is a 38 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Last seen 12/11/25 at which point no medication changes were made.

- William reports that he is as "Depressed as ever". Worsening of mood around the holidays due to personal and societal stressors
- continues to work with Charles Morris in therapy
- depressive symptoms including low mood, anhedonia, low motivation, sleep disturbance, low motivation, and excessive guilt above and beyond what is typical for William
- William reports he has been using hydroxyzine but doesn't notice any benefit
-Feels like he has been "masking" for last 9 months, now confronting more of what he has done during manic episodes
- encouraged consideration of pausing work on this while acutely depressed, however William does not feel this is doable for him
- Discussed medication options including increasing current regimen vs adding new med- opted for increase in lithium to target

Psychiatric Review Of Systems:
Sleep changes: improving
Appetite changes: denies
Energy changes: low
Overwhelming Anxiety: yes
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no

Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serv
e as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:

UDS:
8/14/24: positive for amphetamine, THC

Data Reviewed:
Epic reviewed

Assessment and Plan:
[table#4]:
Problem List Items Addressed This Visit
None

William B Seretta is a 38 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to mania and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, an
d should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally,

lithium is also indicated for bipolar depression.

**2/5/26: **depressive symptoms of low mood, excessive guilt, low energy and motivation, anhedonia. Destablization of mood after holidays and current social and societal stressors. Discussed ongoing therapy with Charles Morris and increasing lithium to target-level ordered. Recommended discontinuation of hydroxyzine due to ineffectiveness. Could consider addition of antipsychotic with efficacy for bipolar depression with low potential to impact LFTs in the future if symptoms do not remit with current interventions.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- **Increase lithium to 1200 mg nightly**
- **Consider addition of Latuda, Vraylar, caplyta if ongoing bipolar depression **
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW
- Consider vocational services referral in the future

#Anxiety
- Sent resources about CBT, William to discuss further with Charles
- Encouraged cardio exercise, good sleep hygiene
- Discussed mindfulness exercises and coping strategies
- **Discontinue hydroxyzine 25-50mg BID PRN anxiety, patient reports not effective**

#ADHD
- Patient currently on Adderall 30 mg BID PRN through his PCP
- Counseled on risks of adderall use including on depression, sleep, anxiety, psychosis, and mania
- MI
** **
#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
**#Transaminitis **
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyroxine, lisinopril through PCP
- Takes B12 and multivitamin, discussed omega 3/fish oil supplementation

#Health Maintenance/Administrative
- Ongoing follow up with PCP as needed
- ROI: signed for patient's former psychiatrist, Dr. Abernathy, patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
- AIMS: n/a
- Labs:**repeat lithium level ordered, **12/10/25: Lithium level: 0.7, TSH WNL, CMP WNL
- BMI: weight- 235lb as of 03/2024
- Consents: sig
ned for hydroxyzine (9/11/25)
- Treatment plan: valid through 3/11/26
- UDS: n/a
- Controlled substance agreement: n/a
- Last preceptor clinic: 9/11/25 w/ Dr. Price

RTC: 5 weeks

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

| 3. | Generalized anxiety disorder | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has felt better this past week. Pt states he is trying to get past extreme guilt/shame of his life. Pt discuses his extreme reluctance to ascribe the long list of erratic and bizarre behaviors which have consumed most of the past 13 years to severe Bipolar illness. Writer and pt discuss diagnostic symptoms which pt can identify with completely. Discussion focuses on self-compassion for having a medical condition which has interfered with his development, caused disappointment and negative self-image mostly due to his feeling it was his fault personally. Pt and writer also discussed difficulty of finding acceptance and then pivoting to what to do going forward to be discussed next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: emotional
Thought Form: logical and coherent
Thought Content: improved mood, struggling with acceptance/ramifications of his diagnosis
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 02/03/2026 1:27 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports being physically ill for the last 2 weeks, feels exhausted. Pt states he is not sleeping well, which is chronic, wakes up 10 times a night, often has nightmares which can be violent. Pt reports that since new year both of his parents are retired which has put and extra financial strain on household and thus increased pt's feeling of not being productive and not deserving of recreational time or pleasure. Writer and pt discussed taking control of things that he can like sleep. Pt urged to discuss with Dr Ness medications that might assist with reducing his nightmares to see if this would allow him to sleep better and to continue efforts to ground in the here and now through relaxation exercises, breathing, getting some light exercise. Pt in agreement.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: Sxs of depression/anxiety, poor sleep and nightmares, parents retired, coping skills
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 01/27/2026 10:40 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

| 3. | GAD (generalized anxiety disorder) | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt states that " I'm doing everything to get to the end of each experience to somehow make up for the lost time I have missed while battling my MH symptoms for the last 10 years". Writer and pt continue discussion of ID, ego and superego as metaphors for describing our impulses,reality-testing and moral ethical development which ac become unbalanced. Pt identifies with and understands better his unrealistic (over-active superego) expectations, fears, self-loathing,overly-critical thoughts/emotions as a form of conditioning he received through his parents but has somehow now been amplified and on "steroids", causing anxiety and fear. Writer and pt also discuss "Johari's Window" which attempts to help people understand more about what others know about them that they are unaware of which pt found useful. Emphasis placed then on the "balance" between impulses, reality testing and moral judgment, using self and other compassion.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildy Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: Sxs of anxiety/depression, discussion of harsh super-ego, fears, judgments of self/others, self compassion
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 01/13/2026 9:19 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he is feeling more anxious. Pt states that holiday events raise his social anxiety. Writer and pt discuss previous mild success in developing a script which is authentic and true but not too detailed but pt does not want to disclose his mental health challenges despite discussion with writer about it being just another medical condition which pt did not choose and for which he has diligently sought treatment for. Pt will use a script he has used before which seems to be acceptable to others about focusing on his health. Pt's sleep is difficult, feels like he can only sleep if something has been accomplished that day. Writer recommended pt practicing more grounding/breathing exercises including guided meditation or attempts to experience non-thinking using mantras that may expose him to moments of "non-thinking". Pt and writer discuss concepts of unconscious, ego and super ego which make sense to pt who identifies with a very strict super ego and would like to focus on this next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: social anxiety, scripts, freudian concepts, grounding/meditation,
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 12/27/2025 11:43 AM EST

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 38 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "Things have been about the same"

HPI: William B Seretta is a 38 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Last seen 10/23/25 at which point no medication changes were made.

- William reports that things have been "about the same", has been feeling well for the last 6 months
- continues to work with Charles Morris in therapy
- Mood described as "stable-" without highs/lows or swings
- Notices more anxiety and guilt about "not contributing to society", regret for past actions and difficulty tolerating uncertainty
-noticing restlessness and decreased ability to relax
- William reports he has been using hydroxyzine intermittently but doesn't notice large benefit
-Labs obtained, within normal limits
- Interested in adding structure through volunteering
- discussed possible referral to vocational services, William will consider but does not feel ready at this time

Psychiatric Review Of Systems:
Sleep changes: improving
Appetite changes: denies
Energy changes: sustained improvement
Overwhelming Anxiety: yes
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no

Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports:
Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache
•	Seroquel [Quetiapine]	Other (See Comments)
		Higher dose? Increased LFT's

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	hydrOXYzine (ATARAX)	25 mg, Oral, 2 times daily PRN
•	lamoTRIgine (LAMICTAL)	200 mg, Oral, Daily
•	levoTHYROxine (SYNTHROID, LEVOXYL)	50 mcg, Oral, Every morning
•	lisinopril	10 mg, Oral, Daily
•	lithium	900 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.
•	traZODone (DESYREL)	50 mg, Oral, Nightly PRN

Taken as prescribed: Yes
Medication response: fair
Side effects: none
Prescription Monitoring Program checked today: Yes

| • | Vitamin D deficiency |

**Psychiatric Specialty Exam: **
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "stable"
Affect: appropriately reactive to conversational content
Thought process: linear, circumstantial at times
Associations: logical
Thought content: no evidence of suicidal ideation, homicidal ideation, or psychosis
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: good
Judgment: good

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278
A1c 4.8
5/9/25
AST 32, ALT 31

12/10/25
Lithium level: 0.7
TSH: WNL
CMP: WNL , AST: 34, ALT: 27

UDS:
8/14/24: positive for amphetamine, THC

Data Reviewed:
Epic reviewed

Assessment and Plan:
[table#4]:
Problem List Items Addressed This Visit
None

William B Seretta is a 38 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

**12/11/25: **William reports that overall his mood has been stable for the last several months. He continues to progress towards goals in therapy. Notes that anxiety and restlessness continues to be more present. Has PRN hydroxyzine that is partially effective, advised to focus on coping skills and behavioral strategies as well as incrasing hydroxyzine dose to up to 50mg. Declined referral to vocational services at this time, but open to considering in future.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 900 mg nightly
- Level 0.7 December 2025
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW
- **Consider vocational services referral in the future**

#Anxiety
- Sent resources about CBT, William to discuss further with Charles
- Encouraged cardio exercise, good sleep hygiene
- Discussed mindfulness exercises and coping strategies
- **Continue hydroxyzine 25-50mg BID PRN anxiety **

#ADHD
- Patient currently on Adderall 30 mg BID PRN through his PCP
- Counseled on risks of adderall use including on depression, sleep, anxiety, psychosis, and mania
- MI
** **
#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
**#Transaminitis **
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyroxine, lisinopril through PCP
- Takes B12 and multivitamin, discussed omega 3/fish oil supplementation

#Health Maintenance/Administrative
- Ongoing follow up with PCP as needed
- ROI: signed for patient's former psychiatrist, Dr. Abernathy, patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
- AIMS: n/a
- Labs: 12/10/25: Lithium level: 0.7, TSH WNL, CMP WNL
- BMI: weight- 235lb as of 03/2024
- Consents: signed for hydroxyzine (9/11/25)
- Treatment plan: valid through 3/11/26
- UDS: n/a
- Controlled substance agreement: n/a
- Last preceptor clinic: 9/11/25 w/ Dr. Price

RTC: 6-8 weeks

Emily J Ness, MD
12/11/25

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

| 3. | GAD (generalized anxiety disorder) | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports his blood work results came back normal and that is a relief for pt. Pt states that he has been looking up grounding techniques for fidgeting and found one he had used perhaps 5-6 years ago as well as some he found on-line that he has been using to an "amazing" effect. Pt states using fidgeting tools has helped him calm his thoughts and his body movements, including pacing which has been a great relief. Pt practicing deep breathing with guidance from his apple watch which has helped him experiment a little with medication. Pt reports his mood has improved and has been less anxious.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: euthymic
Affect: pleasant
Thought Form: logical and coherent
Thought Content: good lab results, improved mood, using fidgeting tools, deep breathing to cope
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 12/16/2025 9:08 PM EST

Encounter Details

Date	Type	Department	Care Team (Latest Contact Info)	Description
12/10/2025 1:15 PM EST	LAB DRAW	NorDx Lab Freeport 23 Durham Road Freeport, ME 04032-6795 207-865-6768		

Allergies - documented as of this encounter (statuses as of 08/11/2026)

Active Allergy	Reactions	Criticality	Noted Date	Comments
Citalopram	Other (See Comments)		05/19/2023	Sexual side effects
Methylphenidate	Other (See Comments)		05/19/2023	
Adalimumab	Headache		05/19/2023	
Lurasidone	Shortness of Breath, Myalgia	High	05/19/2023	
Quetiapine	Other (See Comments)		02/27/2025	Higher dose? Increased LFT's

Medications - documented as of this encounter (statuses as of 08/11/2026)

Medication	Sig	Dispense Quantity	Last Filled	Start Date	End Date	Status
Simponi 50 MG/0.5ML Solution Auto-injector	every 30 days Unk dose, monthly, for Lyme flare-up, last 10 days ago.			09/17/2021		Active
omeprazole (PriLOSEC) 20 MG Capsule Delayed Release	Take 30 mg by mouth daily					Active
amphetamine-dextroamphetamine (Adderall) 20 MG Tab	Take 20 mg by mouth daily 1-2 tabs daily as needed					Active
levoTHYROxine (Synthroid, Levoxyl) 50 MCG Tab	Take 50 mcg by mouth every morning.					Active
lisinopril 10 MG Tab	Take 10 mg by mouth daily.					Active

Active Problems - documented as of this encounter (statuses as of 08/11/2026)

Problem	Noted Date	Diagnosed Date
Vitamin D deficiency	03/23/2022	
Rectal bleeding	03/14/2022	
B12 deficiency	03/14/2022	
Lyme arthritis	03/12/2022	
Bipolar 1 disorder	03/11/2022	
Polyneuropathy, peripheral sensorimotor axonal	10/17/2021	
Severe cannabis use disorder		

Resolved Problems - documented as of this encounter (statuses as of 08/11/2026)

Problem	Noted Date	Diagnosed Date	Resolved Date
Major depression, recurrent, chronic	02/28/2020		04/21/2022
Bipolar disorder			04/21/2022

Social History - documented as of this encounter

Tobacco Use	Types	Packs/Day	Years Used	Date
Smoking Tobacco: Some Days				
Smokeless Tobacco: Never				

Alcohol Use	Standard Drinks/Week
Not Currently	0 (1 standard drink = 0.6 oz pure alcohol)

PHQ-2	Answer	Date Recorded

Results - documented in this encounter

COMPREHENSIVE METABOLIC PANEL - Final result (12/10/2025 1:27 PM EST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Sodium	138	135 - 145 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Potassium	4.9	3.5 - 5.1 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Chloride	102	96 - 108 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Carbon Dioxide	25	21 - 30 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Anion Gap	11	7 - 16 mEq/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Blood Urea Nitrogen	13	6 - 20 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Creatinine	0.89	0.50 - 1.30 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
BUN Creatinine Ratio	14.6			12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
eGFRcr Male (CKD-EPI 2021)	112	>60 mL/min/1.73m*2		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Comment: Please note that as of 6/24/2025 eGFRcr calculation is updated and reported based on the CKD-EPI 2021 equation using blood creatinine levels. The new eGFRcr equation has similar overall performance characteristics to the older equations. Estimated GFR values have limitations and need to be interpreted based on clinical context. National Kidney Foundation guidelines recommend ordering cystatin C as a confirmatory test for patients with eGFRcr of 45-59 mL/min/1.73m2 with urine albumin-creatinine ratio <30 mg/g, and in patients for whom the creatinine may be a less reliable indicator of GFR near decision points. See NorDx Test Catalog for more information.						
Glucose	91	70 - 99 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Comment: Per ADA guidelines these ranges are for fasting glucose only						
Protein	7.0	6.4 - 8.3 g/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Albumin	4.7	3.5 - 5.1 g/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Globulin	2.3	2.0 - 3.5 g/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Albumin/Globulin Ratio	2.0			12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Bilirubin	0.5	<=1.2 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	
Calcium	9.7	8.5 - 10.2 mg/dL		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Alkaline Phosphatase	56	40 - 129 U/L		12/10/2025 10:26 PM EST	NORDX SCARBOROUGH CAMPUS

Progress Notes - documented in this encounter

Charles, LCSW - 12/09/2025 8:25 AM EST

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports being sick with flu symptoms for last 2 weeks but had a good Thanksgiving. Pt states that he is relieved that his parents seem to be adhering to new "roommate" expectations, cleaning up after themselves, putting things back in their place after using them, etc. Pt more and more aware of OCD symptoms, constant pacing and restlessness, over-thinking everything, and trying to keep everything in order which has raised his anxiety. . Pt denies checking behaviors, not worried about his safety. Pt states that since his dog Enzo's death his sense of "time" has changed and he feels time is going quicker and that he has less to waste. Writer and pt discussed motor movement agitation, OCD symptoms and relaxation exercises (body scan, guided meditation) and pt will try some relaxation exercises this week.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: "Ok"
Affect: anxious
Thought Form: logical and coherent
Thought Content: OCD sxs, anxiety, relationship with parents, relaxation skills
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 12/09/2025 4:24 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: "My confidence is growing by breaking-down tasks". Pt states he is focusing on basics, sometimes runs into barriers that are difficult to work around. Pt reports that for last decade or mor he has been experiencing uncontrollable restlessness, uses stress ball to stop index finger and thumb tapping to self-soothe. In addition pt acknowledges that he is preoccupied by everything needing to be in exactly the right place or his anxiety becomes very stressful.Writer and pt agree that possible OCD symptoms may need focusing on more next session. Pt agreed.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: euthymic
Affect: anxious
Thought Form: logical and coherent
Thought Content: physically sick last 5 days, feeling more confident , anxious with OCD sxs
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 11/30/2025 10:16 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that things are going well, feels his mood has improved. Pt states that he has discovered lots of old hard drives and has been organizing files which has been satisfying. Pt states he has been journaling his thoughts and memories as he has been reviewing these files, including medical files and has allowed him to "remember" what he has been writing down, allowing him to put them into a timeline and context. Pt states that when his dog, Enzo, died last Spring he has experienced a big shift in in his wanting to be a person who would take advantage of the life that was saved by his dog and in memory of him. Pt states he is cautiously trying to pace and temper his usual tendency to overdue everything and is willing to take time-outs, eat and sleep and even enjoy part of his day rather than rushing as if he was running out of time. Writer and pt discuss self-care routines that can anchor his attempts to balance new interests/motivation with appropriate self-care and self compassion. Pt in agreement.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly depressed
Affect: pleasant
Thought Form: logical and coherent
Thought Content:improved mood, journaling and memories, self-care and balance
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 11/19/2025 2:28 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	PTSD (post-traumatic stress disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he is having success with using a simplified To-Do list (3 items). Pt states that his mother continues to recover well from her shoulder surgery,is still waiting for his father to give him the title to father's old car so that he can get his own title. Pt states his mood is good overall, does get frustrated with father's near narcissistic control of family decision-making and the slowness of it but is used to it and he has made progress. Pt at least has a private space outside of the house and writer and pt discuss structuring daily time outside the house (waling in a park,shopping, gym, etc) so that his parents become accustomed to his being out of the house regularly without his having to ask permission. Pt in agreement, will try this week.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: stable mood, success with To-Do list, managing expectations of parents
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Charles, LCSW - 10/30/2025 3:57 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports I got the car situated". Pt stated that he did all the prep work for his parents to purchase a new car and then went with father to dealer and purchased the car. This means that pt able to purchase parent's old car and have independence again. Pt promptly insured and registered his new car and because this experience with parents went well they are now planning the renovation of the basement for pt to live again. Pt's mood has improved,feels more confident and productive, has tentatively embraced hope for future but wants to pace himself, not move too far or too fast.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: euthymic
Affect: pleasant
Thought Form: logical and coherent
Thought Content: improved mood/functioning, increased confidence
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 11/04/2025 4:56 PM EST

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 38 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "Things are going pretty well"

HPI: William B Seretta is a 38 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Last seen 09/11/25 at which point hydroxyzine PRN was added for anxiety.

- William reports that things have been "going pretty well" for the last several months
- continues to work with Charles Morris in therapy
- increasing intentional time spent with family
- Mood stable- Anxiety is now primary concern, increased guilt and regret for past actions and difficulty tolerating uncertainty
- continues to drink minimal alcohol, "a couple beers" once in a while
- endorses noticing tapping of his fingers that he describes as a "tic" and restlessness, wonders if this is a side effect of medication
- we discuss unlikely to be medication side effect, not on antipsychotics
- William reports he has been using hydroxyzine about once a day, notes that it "doesn't hurt" but not noticing significant benefit
- Sleep improved, using trazodone nightly
- Discussed need for obtaining maintenance labs while on Lithium, William expressed understanding - did get labs through intermed, however missing lithium level

Psychiatric Review Of Systems:
Sleep changes: improving
Appetite changes: denies
Energy changes: sustained improvement
Overwhelming Anxiety: yes
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several

states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost t
his. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:

**Psychiatric Specialty Exam: **
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "pretty good"
Affect: appropriately reactive to conversational content
Thought process: linear

Associations: logical
Thought content: no evidence of suicidal ideation, homicidal ideation, or psychosis
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: good
Judgment: good

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278
A1c 4.8

5/9/25
AST 32, ALT 31

UDS:
8/14/24: positive for amphetamine, THC

Data Reviewed:
Epic reviewed

Assessment and Plan:
[table#4]:
Problem List Items Addressed This Visit
None

William B Seretta is a 38 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly suc
cessful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

**10/23/25: **William reports that overall his mood has been stable for the last several months. He continues to progress towards goals in therapy. Notes that anxiety continues to be more prominent. Has PRN hydroxyzine that is partially effective. Encouraged to continue work in therapy. Encouraged to obtain monitoring labs for lithium (CMP, TSH, and Li Level). No medication changes

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- **Repeat labs ordered**
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Sent resources about CBT, William to discuss further with Charles
- Encouraged cardio exercise, good sleep hygiene
- Discussed mindfulness exercises and coping strategies
- Continue hydroxyzine 25mg BID PRN anxiety

#ADHD
- Patient currently on Adderall 30 mg BID PRN through his PCP
- Counseled on risks of adderall use including on depression, sleep, anxiety, psychosis, and mania
- MI
** **
#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
**#Transaminitis **
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyroxine, lisinopril through PCP
- Takes B12 and multivitamin, discussed omega 3/fish oil supplementation

#Health Maintenance/Administrative
- Ongoing follow up with PCP as needed
- ROI: signed for patient's former psychiatrist, Dr. Abernathy, patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
- AIMS: n/a
- Labs: LFTs now WNL (5/9/25), **due for Li level, TSH, CMP- ordered**
- BMI: weight- 235lb as of 03/2024
- Consents: signed for hydroxyzine (9/11/25)
- Treatment plan: valid through 9/10/25
- UDS: n/a
- Controlled substance agreement: n/a
- Last preceptor
clinic: 9/11/25 w/ Dr. Price

RTC 6 weeks

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he met with Dr Ness, meeting went very well, feels more accepting of his diagnosis after reflecting more on his symptoms over the last 10 years . Pt states that his clarity is getting better but this has lead to some increase in his anxiety. Writer and pt discuss topic of last session which was the intersection of pt's low self esteem connected to perfectionism coping and the over-thinking of opportunity costs associated with every decision, big and small, leading to paralysis/depression. Pt and writer reviewed several techniques for staying in the here and now (5 finger breathing, 5 senses grounding) and practicing radical acceptance surrounding pt's diagnosis and the inevitability of opportunity costs that allow for making the best decisions we can with the resources we have while using lot's of self compassion. Pt found this discussion helpful.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildy Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: anxiety/depressive sxs, over-thinking, perfectionism,radical acceptance,opportunity costs, self compassion
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 10/28/2025 12:48 PM EDT

Progress Notes - documented in this encounter

Charles, LCSW - 10/16/2025 3:54 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that his parents came home and his anxiety went through the roof, back to feeling depressed that nothing will ever change. Pt states that it is impossible to talk to his father even for 15 minutes, too busy, too stressed, too dismissive. Pt states he is back to being overwhelmed with everything: no enjoyment, no car, no privacy, no autonomy, rushing everything. Writer and pt discuss some DBT concepts such as radical acceptance, appreciating the here and now (as opposed to trapped in past, fearful of future), and allowing the dilemma of opportunity costs as something to embrace.Pt states he would like to focus on radical acceptance during next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: depressed mood with anxiety, still functioning better, sleeping , taking medications
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 10/21/2025 9:32 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	
3.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he feels much less anxious, probably due to his parents still being in Europe. Pt states his mood has been better but starting to have some anticipatory anxiety about his parent's return. Pt states he has been super organizing the house, doing some deep cleaning, finding stuff he thought he had lost, sometimes filling-in memory holes, sometimes getting in touch with positive aspects of himself and how he might be able to regain a sense of confidence he had before. Since parents absence for last 2 weeks pt more in touch with how lonely he feels. Writer and pt discuss possible work on scripts and narratives that pt could use to comfortably describe to others what he has been dealing with for last 10 years, including living with his parents and what his interests are going forward. Pt feels this would be rewarding to work on in sessions.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: improved and stable mood, taking control of his environment, narrative and scripting as tx goals
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness

Electronically signed by Charles, LCSW at 10/14/2025 10:49 AM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	
3.	PTSD (post-traumatic stress disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that his parents are on a trip to europe and since they left his anxiety has reduced 75%, just feels more confident that he isn't being judged 24/7. Pt states that not having his own negative dialogue about what his parents might be thinking of him allows him to be more hopeful, does not have to, inside his head or outwardly, worry about using the car, eating what he likes or just having fun playing video games. Pt also more hopeful since he was able to stop gambling for the whole month of September which allowed him savings he used to buy himself a new computer which was long overdue. Pt states that he anticipates there will be a reversion back to his former self once his parent's return but writer and pt discuss the the potential for maintaining his increased confidence and hopefulness even on return from parents, using this time to transition from adolescent in parent's home to a supportive and deserving adult with appropriate needs and responsibilities. Pt would like to follow-this up next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: pleasant, more assured
Thought Form: logical and coherent
Thought Content: independent feeling with parents away, hopeful, more confident, less depressed/anxious
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Ness as necessary.

Electronically signed by Charles, LCSW at 10/08/2025 4:56 PM EDT

Last Filed Vital Signs - documented in this encounter

Not on file

Functional Status - documented as of this encounter

Are you deaf or do you have serious difficulty hearing?

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Are you blind or do you have serious difficulty seeing, even when wearing glasses?

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Do you have serious difficulty walking or climbing stairs? (5 years old or older)

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Do you have difficulty dressing or bathing? (5 years old or older)

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Because of a physical, mental, or emotional condition, do you have difficulty doing errands alone such as visiting a doctor's office or shopping? (15 years old or older)

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Mental Status - documented in this encounter

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 09/29/2025 2:02 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	PTSD (post-traumatic stress disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he continues to experience violent nightmares, would be open to any effective medication that would not be sedative. Pt states that upon reflection after last session and after reviewing more past photos that memory holes and the loss of confidence that he once had has been the major contributors to his levels of anxiety and depression. Pt states that confidence and achievement brings him happiness. Writer and pt discuss his seeking strategies to increase confidence and how they could be incorporated into treatment goals. Writer and pt go over 2-minute rule and some CBT techniques for stopping negative rumination to start some education process of developing more confidence in affect regulation and initiation of tasks that will continue forward.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: animated
Thought Form: logical and coherent
Thought Content: PTSD nightmares, confidence and memory holes, coping skills
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 10/01/2025 9:58 AM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	

| 3. | Attention deficit hyperactivity disorder (ADHD), combined type | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he is tired, fatigued overall, not sleeping as well lately. Pt states he has been experiencing scary dreams, often that includes violence (being present at atrocities) and sometimes being close to death (Salt Lake incident) before waking up. Pt states that this has happened in past (nightmares) which have caused him to be scared of going to sleep. Writer encouraged pt to discuss these sleep/dream/ptsd problems with Dr Ness before next scheduled appointment on 10/23 if symptoms continue by calling med-refill line informing of symptoms and requesting a call back. Pt stated he would. Writer also discussed several techniques for interrupting over-thinking and negative rumination (5 finger breathing, 5 senses grounding, mindfulness walk outside). Pt responded that these techniques are helpful but when he practices them he also is thinking "I didn't earn this" (relaxation, distraction, pleasure). Writer and pt discuss this as a primary stressful dynamic between being stuck in painful past and fearful future while also feeling "guilty" and unworthy to experience the peace and pleasure of the present. Pt would like to explore techniques to manage this guilt (not earning pleasure) and to increase self-compassion. Writer in agreement.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: PTDS symptoms (violent repetitive nightmares), sleep disturbance, fear of sleep, coping strategies, Tx goals
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient po
rtal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 09/24/2025 3:59 PM EDT

E&M Follow Up Note

Identifying Information:
Name: William B Seretta

DOB: 5/2/1987
MR#: E765841
Age: 38 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

*Visit precepted by Dr. Daniel Price. *

Chief Complaint: "Things are going pretty well"

HPI: William B Seretta is a 38 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Last seen 6/9/2025 by Dr. Ellen Meirer at which point no medication changes were made. He sees Charles Morris for individual therapy.

- William reports that things have been "going pretty well" for the last several months. Notes improved mood and ability to work through moving through guilt surrounding past behaviors in therapy
-Denies elevated mood, has been feeling neutral
- Anxiety is now primary concern, described as ruminative thinking and inability to enjoy relaxing due to overthinking. Additionally increased avoidance of socialization due to overthinking
- Stopped drinking 1 month ago, felt he was becoming too reliant on it. Does notice it has made him more isolative, but overall happy with the change. Cannabis edible roughly 2x/week- trying not to rely on this and using as a "reward"
- Discussed that use of coping skills and mindfulness may help with anxiety, in addition to cessation of alcohol
-Discussed my concern that Adderall may contribute to anxiety. William states that he feels the symptoms get worse without Adderall, as he would be too overwhelmed. Discussed risks of using in setting of bipolar disorder. Continues to feel that benefits outweigh risks
- William reports that he would like to try a medication to help with anxiety, discussed PRN options and William opted for hydroxyzine. R/b/se discussed
- Sleep has been much improved, about 6.5 hours per night with use of Apple watch to track
- Denies SI/safety concerns
- Discussed need for obtaining maintenance labs while on Lithium, William expressed understanding

Psychiatric Review Of Systems:
Sleep changes: improving
Appetite changes: denies
Energy changes: sustained improvement
Overwhelming Anxiety: yes
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use

Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supp ortive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Judgment: fair to good

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278
A1c 4.8

Assessment and Plan:

[table#4]:
Problem List Items Addressed This Visit
None

William B Seretta is a 38 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I

am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

**9/11/25: **William reports that overall his mood has been stable for the last several months. He continues to progress towards goals in therapy. Notes that anxiety has now come to the forefront, in the form of ruminative thinking. He recently stopped drinking alcohol which has overall been a positive change. We discuss ways to manage anxiety through ongoing work w/ therapy and utilization of coping skills such as mindfulness. Additionally, he would like to try hydroxyzine PRN for more support. Discussed r/b/se. Encouraged to obtain monitoring labs for lithium (CMP, TSH, and Li Level).

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- **Repeat labs ordered**
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Sent resources about CBT, William to discuss further with Charles
- Encouraged cardio exercise, good sleep hygiene
- **Discussed mindfulness exercises and coping strategies **
- **Start hydroxyzine 25mg BID PRN anxiety **

#ADHD
- Patient currently on Adderall 15 mg BID PRN through his PCP at Intermed
- Counseled on risks of adderall use including on depression, sleep, anxiety, psychosis, and mania
- MI
** **
#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
**
#Transaminitis **
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyroxine, lisinopril through PCP
- Takes B12 and multivitamin, discussed omega 3/fish oil supplementation

#Health Maintenance/Administrative
- Ongoing follow up with PCP as needed
- ROI: signed for patient's former psychiatrist, Dr. Abernathy, patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
- AIMS: n/a
- Labs: LFTs now WNL (5/9/25), due for Li level, TSH, CMP- ordered
- BMI: weight- 235lb as of 03/2024
- Consents: **signed for hydroxyzine (9/11/25), **
- Treatment plan: valid through 9/10/25
- UDS: n/a
- Controlled substance agreement: n/a
- Last preceptor clinic: 9/11/25 w/ Dr. Price

RTC 6 weeks

Emily J Ness, MD

Associated attestation - Daniel Price, MD - 09/12/2025 9:50 AM EDT
Formatting of this note might be different from the original.
I personally interviewed and examined the patient with the resident, reviewed the findings, Dr. Ness, discussed the plan, and read their Progress Note.

In addition to their findings, I note the patient insists on shaking this writers hand when I enter. H is also note he has fidgetiness in his Right hand during session.

I concur with the Impression and Plan.

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

| 3. | PTSD (post-traumatic stress disorder) | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports identifying with Bipolar Disorder diagnosis after reviewing some videos on "Polar Warriors" a Youtube channel focused on Bipolar disorders. Pt states he has had a more consistent mood for several months now, had good first meeting with Dr Ness, next appt 10/23, added Hydroxyzine for anxiety. Writer and pt discuss coping skills for managing acute (5 finger breathing, 5 senses grounding) and chronic anxiety (routine daily self care including appropriate sleep, nutrition, exercise, recreation, and social activities). Pt reports he has already found it useful to structure daily and weekly activities and gives him a sense of accomplishment to check-off things.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: mild anxiety symptoms, stable mood, coping skills
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Ness
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 09/16/2025 4:16 PM EDT

Charles, LCSW - 09/09/2025 9:34 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has felt less depressed and has more clarity but that has come with the consequence of attempting to process the past which doesn't make a lot of sense or is just hard to remember. Pt states that his level of anxiety has increased as a result, is over-thinking way too much. Writer and pt discussed several mindfulness techniques (STOP, 5 finger breathing, Guest House) to help interrupt negative/rapid thoughts. Pt states he will be meeting with Dr Ness on 9/11, requests that writer possibly attend with him at his second meeting.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: mild anxiety and depressive sxs, insight to past behaviors related to bi-polar disorder, Dr Ness appt, coping skills to interrupt over-thinking
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he couldn't participate in last Saturday's family event at his house. Pt states he was experiencing too much anxiety about event, that it was a chore he was expected to participate in without regard to his anxiety level. Pt dis make short appearances but spent most of the time in his room, felt trapped , over-thinking way too much about what others think about him. Pt explains that alcohol used to be a coping strategy for these problems but has not used alcohol for a long time and is seeking better alternatives to managing this form of over-thinking. Writer and pt discuss family dynamics, living as an adult in parent's home and the self-critical/judgemental conditioning that have been internalized by patient as a consequence. Pt states he would like to work on coping strategies for this over-thinking problem going forward.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: increased social anxiety, isolating, over-thinking, poor self-esteem, family dynamics, seeking coping strategies
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 08/27/2025 11:26 AM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS/HCC,HHS/HCC) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he spent most of the night trouble-shooting faulty internet router, had to replace it himself this morning. Pt frustrated that his family often relies on him to solve problems for the household but his needs (complete he flood repair in basement so that he could have more privacy/ autonomy) are continually put aside dur to the crisis de jure (last week the refrigerator which is not fixed yet). Pt has been able to sleep better ,except for last night, because he currently is at least problem-solving for his family and that allows him a sense of achievement which in return allows him not to feel guilty and non-productive. Pt states feeling no-productive is a barrier for him to enjoy leisure or recreational activities because they would be judged a "frivolous" by his parents and himself. Writer and pt discuss family conditioning and being an adult in parents house as a challenging environment, explore appropriate assertion of autonomy and privacy boundaries in conjunction with empathy and compassion for his now elderly parents.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: mood stable, family stressors, problem-solving,appropriate boundaries with family
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Emily Ness as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 08/19/2025 10:47 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS/HCC,HHS/HCC) **	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he feels trapped

by family's financial circumstance, cost of new fridge will displace plan to get new car and he could buy old one from parents. Pt states that his anxiety in the last week has increased, isolating in his room, everything seems repetitive and useless, has no friends, can't get out of the house. Pt states that he found the courage to look at photos of Enzo, his recently deceased dog, which left him feeling that he has lost a lot of his time-line memories of many things since moving to Maine fro Utah 13 years ago. Writer and pt discuss grief/loss processes and perceptions of time distortion as well as the impact of severe psychiatric symptoms on memory. Pt states he is not afraid to look at past anymore, wants to understand it and move on.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: increased anxiety, sxs of depression, grief/loss re deceased dog and perceived memory loss.
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 08/11/2025 9:16 PM EDT

Progress Notes - documented in this encounter

Charles, LCSW - 07/31/2025 3:43 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that his family's very expensive refrigerator broke and needs to be replaced. Pt states that his mood has been OK, has been trying to keep to a schedule like sleeping by 12 AM, is tracking his sleep stages with his watch. Pt is still thinking of possible volunteer roles but the lack of a car is still a problem and the fridge repair will not help. Writer and pt discuss his success at making a schedule and sticking to it and importance of self-care routines (ADLs) which he is doing every day. Pt intends to continue tackling problems like lack of car and renovating family basement as many steps that can be accomplished one day at a time.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: pleasant, confident
Thought Form: logical and coherent
Thought Content: appliance problems, confidence in self-care and accomplishing tasks
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 08/06/2025 4:19 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **
CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

| |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that his parents went back up to camp again and he is at home alone. Pt states his mood has improved since last week, feeling more optimistic. Pt states that last Friday he might have had the best day ever, spent day at the beach with a friend due to spontaneous invite and with no plan. Pt spent day feeling like himself, with no pressures, able to talk candidly with friend about normal things. Pt states he is interested in investigating about volunteering so that he can have structured activities he would enjoy, such as helping animal rescue shelter 6-8 hours a week or so. Writer and pt discussed possible referral back to vocational counseling to assist him but pt would prefer to look into it himself and if he feels he needs help then access vocational counseling.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: euthymic
Affect: pleasant
Thought Form: logical and coherent
Thought Content: less depressed, more optimistic, socialized with friend, would like to volunteer to structure time out of house
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Meierer as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Attention deficit hyperactivity disorder (ADHD), combined type **	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that his parents came back from their camp several days early due to the electrical failure of their complex solar system which his father had installed. Pt states that he has for a long time altered his personality around his father and his parent's premature return was a blow to his feeling himself for a few short days. Pt attempting to persuade parents to assist him in moving back to the basement where he had more privacy and autonomy to be himself. Writer and pt discussed asserting appropriate boundaries with his parents and some possible scripts. Pt states he he is looking forward to meeting his new resident psychiatrist soon.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: tensions with parents, self-identity, boundaries
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 07/15/2025 11:51 PM EDT

** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS/HCC,HHS/HCC) **	
2.	PTSD (post-traumatic stress disorder)	

| 3. | Attention deficit hyperactivity disorder (ADHD), combined type | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he is alone at his parent's house thi week while his parents are at their Summer camp. Pt states that for these few days he can feel like himself , not always preoccupied by how his parents are judging what he says and does,is too noisy or plays music. Since flooding forced pt to move from basement apartment to the bedroom next to his parents upstairs he has no privacy or autonomy. Pt frustrated by parents not able to approve plans they agree with and that he would finance to fix the basement but don't have the time or motivation to change when they are both exhausted by their work days. Writer and pt discuss utility of expressing his needs through the lens of supporting the family as a whole by improving property and allowing privacy for both parties (Pt and his parents). Pt plans to discuss with parents when they get back from camp.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: irritated
Thought Form: logical and coherent
Thought Content: frustration about being stuck living with his parents for last 13 years
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Meierer as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 07/08/2025 8:49 PM EDT

Charles, LCSW - 06/26/2025 4:00 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

**DURATION OF SERVICE: 60 minutes **
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS/HCC,HHS/HCC) **	
2.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that that he is attempting to accept that he needs to be more consistent in his efforts to help himself, to stop the recurrent overdoing everything and then doing nothing. Pt states he is currently struggling with sleep since the death of his dog but better than April and May. Writer and pt discuss his use of his daily planner and computer watch and resist temptation to immerse himself in data but to establish just one action behavior to accomplish each day from only one category of self care(health,occupation,sleep,nutrition, exercise,recreation, etc) so that he can gain confidence he can do one thing at a time without being overwhelmed.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: contemplative
Thought Form: logical and coherent
Thought Content: sxs of depression, sleep issues, contemplation of sxs, coping strategies
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with new Resident physician as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 07/01/2025 6:53 AM EDT

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 38 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "thinks are fine"

HPI: William B Seretta is a 38 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. He sees Charles Morris for individual therapy.

- States that he has come to the realization that "anxiety, this is most significant problem I have. This is the biggest thing that has been holding back". Endorses "worrying about the potential things that could go wrong" and "planning for every possible scenario" that takes up a lot of time and is draining for him. Feels that "this has never really been addressed" which is "scary", feels frustrated that he did not figure this out earlier. I shared my thought that potentially his depression has improved with treatment and now that he has the energy and motivation to do more things anxiety is coming to the forefront.

-Has talked with trials about this, states that they have not started working on strategies to address that yet. We talk about picking a realistic goal of something to accomplish, William talks about wanting to going to Portland and walk around or have a Zoom call with friends. Endorses barriers include feeling like "I did not earn it" and "can I have fun because of put off other things".

-Had to put his dog down a few weeks ago, feels like he does not have a "good outlet" to address things without his dog.
Put dog down a few weeks ago, feels like he doesn't have another good outlet to address things.

-Discussed my concern that Adderall may contribute to anxiety. William states that he feels the symptoms get worse without Adderall, feels he would not leave his room as he would be too overwhelmed without Adderall. Does not drink caffeine, recently started working out again.

Psychiatric Review Of Systems:
Sleep changes: denies
Appetite changes: denies
Energy changes: sustained improvement
Overwhelming Anxiety: yes
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Wald
orf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache
•	Seroquel [Quetiapine]	Other (See Comments)
		Higher dose? Increased LFT's

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	lamoTRIgine (LAMICTAL)	200 mg, Oral, Daily
•	levoTHYROxine (SYNTHROID, LEVOXYL)	50 mcg, Oral, Every morning
•	lisinopril	10 mg, Oral, Daily
•	lithium	900 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.
•	traZODone (DESYREL)	50 mg, Oral, Nightly PRN

Taken as prescribed: Yes
Medication response: fair
Side effects: none
Prescription Monitoring Program checked today: Yes

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC,HHS/HCC)
•	Bipolar 1 disorder (CMS/HCC,HHS/HCC)
•	Lyme arthritis (CMS/HCC,HHS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia

Psychomotor activity: no agitation or retardation
Mood: "fine"
Affect: more animated than previously but appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278

None

[table#5]:
Visit Diagnoses

[table#6]:
	Bipolar II disorder, most recent episode major depressive (CMS/HCC,HHS/HCC) - Primary
	ADHD (attention deficit hyperactivity disorder), combined type
	PTSD (post-traumatic stress disorder)
	Cannabis use disorder, severe, dependence (CMS/HCC,HHS/HCC)
	Borderline personality disorder (CMS/HCC,HHS/HCC)

[table#7]:

William B Seretta is a 38 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite

treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

Today, William is quite perseverative on the role of anxiety in his life. He expresses feeling frustrated that has not been addressed previously and that he has not realized the role is playing. I shared my belief that he has been showing slow improvements in energy and motivation that I think a representative of improvement in his depression. With these changes, his anxiety has become more apparent. We started working on CBT for anxiety including identifying manageable goals and how core beliefs about himself get in the way of accomplishing these goals.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Sent resources about CBT, William to discuss further with Charles
- Encouraged cardio exercise, good sleep hygiene

#ADHD
- Patient currently on Adderall 15 mg PRN through his PCP at Intermed
- Counseled on risks of adderall use including on depression, sleep, anxiety, psychosis, and mania
- MI

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Canna
bis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyroxine, lisinopril through PCP
- Takes B12 and multivitamin, discussed omega 3/fish oil supplementation

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 235 lbs (3/29/24)
- Could check vitamin D level and next labs

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 2 months

Ellen M Meierer, MD
06/13/25

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Ellen M Meierer, MD, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 05/29/2025 3:44 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	
PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has had some very bad weeks since meeting, his dog became sick again and Vet recommended he be put down which pt reluctantly dis. Pt states he experienced a few days of sleeplessness, shock, has attempted to stay busy to be distracted which has been helping. Pt states that he feels he owes it to his memory of his dog to work actively on his problems of feeling anxious/afraid about future, has been using activity schedule to keep problems/solutions/goals in front of him daily. Pt denies any SI. Writer and pt discuss acute symptoms of grief/loss and importance of allowing his feelings to come and go while attempting to orient himself towards the future he would prefer. Pt states he found session very helpful.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: loss of dog, grief/loss, sleep disruption, future orientation
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 06/08/2025 10:17 AM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS/HCC,HHS/HCC) **	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports he is continuing to structure each day by using an activity calendar.Pt states that he is currently working on his family's basement with a goal to move back there for more autonomy and privacy after it was flooded 2 years ago. Pt states his mood has improved, is using his new I watch to track personal physical metrics and sleep. Pt told writer he is more motivated to take action for change, is wary of doing too much too fast as he has in past leading to physical and emotional exhaustion
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly depressed
Affect: contemplative
Thought Form: logical and coherent
Thought Content: structured activities, stable mood, motivation
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine.

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS/HCC,HHS/HCC) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*:
Pt reports that he is feeling OK but has been physically sick recently. Pt states that he has noticed a cycle where he feels better, takes some positive action, becomes exhausted and due to auto-immune problems becomes susceptible viruses/colds. Pt states that this cycle is discouraging and depressing. Pt reports that he attended his sister's baby shower with family but it was extremely anxiety-provoking, having to answer questions aboy what he is doing and his future. Pt and writer discussed how narratives can become motivating and finding the right script that feels comfortable to tell others how you are doing authentically but without negative details can become empowering. Pt assigned homework to work on a short script he would feel comfortable discussing with friends/family for next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: depressive symptoms, increased anxiety, family gathering, effect of auto immune disease effecting his motivation
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 04/29/2025 9:45 PM EDT

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "thinks are fine"

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. He sees Charles Morris for individual therapy. Decrease clonazepam from 0.5 mg to 0.25 mg nightly at our last visit

-States that things are "going fine, not much going on". He is "feeling a bit better about getting things accomplished" as he is working with Charles about "breaking down tasks into more manageable pieces". Discusses the example working on the basement and how to feel that he is making progress in this area.

-Continues to talk with Charles about prior traumatic experiences and this has been getting easier over time.

-Decrease of clonazepam went well, "I did not really notice". We discussed discontinuing clonazepam. He states "I have been on it for so long, I am not sure what the initial objective was". "It has always been hard to tell what medication is doing what" and we discussed the importance of tracking benefits of medication over time and not just in the moment.

-Discussed ongoing Adderall use and my concern that this could be contributing to bipolar depression. Regarding this risk, William states "on paper I am sure" but does not think that this applies to him. States "I have been on just about everything" to treat ADHD and he does not see why he would stop taking Adderall. Compares taking Adderall to wearing glasses.

Psychiatric Review Of Systems:
Sleep changes: denies
Appetite changes: denies
Energy changes: sustained improvement
Overwhelming Anxiety: rarely
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions
at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:

•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "fine"
Affect: more animated than previously but appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

	ADHD (attention deficit hyperactivity disorder), combined type

[table#8]:

William B Seretta is a 37 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

Today, William continues to make progress on accomplishing small goals with sustained improvement in his mood since titration of lamotrigine. Was able to taper clonazepam without issue and we will plan to discontinue today. Regarding polypharmacy, we did discuss my concerns about Adderall use. As William is skeptical of his bipolar diagnosis, he does not believe that the risk of bipolar depression or mania applies to him. We will continue to work on using behavioral activation to accomplish tasks.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Discontinue clonazepam

#ADHD
- Patient currently on Adderall 15 mg PRN through his PCP at Intermed
- Counseled on risks of adderall use including on depression, sleep, psychosis, and mania
- MI

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyrox
ine, lisinopril through PCP
- Takes B12 and multivitamin, discussed omega 3/fish oil supplementation

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 235 lbs (3/29/24)
- Could check vitamin D level and next labs

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 5/12 2:30 pm

ELLEN M BROWN, MD
04/07/25

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, ELLEN M BROWN, MD, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Formatting of this note might be different from the original.
I personally interviewed and examined the patient with the resident, reviewed the findings, discussed the plan, and read their Progress Note.

In addition to their findings, I note William is a pleasant 37 y.o. male who is seen for follow up by telehealth. He reports overall stability of symptoms. He is working with therapist on management of mood and anxiety symptoms. He has tolerated Klonopin reduction and agree with stopping. Continue to discuss risks of Adderall in patients with bipolar disorder. Suggest discussing importance of similarities and differences between distractibility and cognitive dysfunction patients with bipolar disorder vs those with ADHD as this may help guide treatment. Likely stopping benzo may have benefits on attention and cognition.

I concur with the Impression and Plan.

Tim Newell, DO

Progress Notes - documented in this encounter

Charles, LCSW - 04/08/2025 4:12 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 60 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS/HCC,HHS/HCC) **	
PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt states that his mood is improved. Pt reports that there are a combination of ways he talks himself out of doing things or making decisions. Pt states that he just decided to thoroughly clean his family's basement for 7 hours straight (had been planned for last 6 months) and it felt good. Pt also got a new phone and negotiated a lower-cost family phone service. Pt remarked that in past when he is able to commit to action he often overdoes it, causing him pain or embarrassment. Writer and pt discussed the attempt to find a reward "governor" which pt could use to dial-back his participation in chosen activities to the extent that he becomes exhausted or hurt and find satisfaction in partially getting a job done. Pt will attempt to schedule 2 daily activities to participate in which may accomplish a goal by end of week. Overall goal is to delay satisfaction without giving-up. Pt in agreement.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content:
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown as necessary

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 04/08/2025 5:56 PM EDT

Progress Notes - documented in this encounter

Charles, LCSW - 03/27/2025 3:46 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive **	
2.	PTSD (post-traumatic stress disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he is extremely annoyed at current state of US politics. Pt states that he has had a trust issue with MaineHealth psychiatry since his only hospitalization at Spring Harbor, feels resentment and anger at times remembering his treatment there. Pt states that he might not have slept in last few days connecting on-line with friends also worried about current state of politics. Pt exhibits pressured speech, irritability, insomnia likely in hypomanic state, no SI. Writer and pt discuss importance of self-care, including sleep, ADLs, nutrition as well as using a news diet to bracket-out triggers for emotional dysregulation. Pt states he is ware of this but feels empowered by ability to correspond with internet friends about important matters that they share. Pt states he is taking meds as prescribed, not using substances.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Distressed
Affect: angry, irritable
Thought Form: logical and coherent
Thought Content: racing thoughts,pressured speech, insomnia, mood irritabillity
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Brown
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 04/02/2025 3:29 PM EDT

Progress Notes - documented in this encounter

Charles, LCSW - 03/18/2025 5:20 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS-HCC) (CMS/HHS) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	
PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports seeing Dr Brown and she reduced Clonazapine from 1/2 to 1/4 mg which patient is interested to see how it effects him.Pt also saw PCP, has lost 40 lbs since October and after stopping Seroquel. Pt concerned about transition Dr Brown to next doctor, believes he needs an attending physician. Pt shares that he has been more stressed and anxious, often feels guilty about being non-productive and it eats at him. Pt would like to discuss coping skills for guilt next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: med changes, PCP, transition to new Dr , guilt
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 03/18/2025 11:55 PM EDT

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987

MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "thinks are fine"

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. He sees Charles Morris for individual therapy.

Going fine, things are pretty consistent not great but not getting worse. Still having more motivation than previously, doing things around the house. Trying to be more consistent in completing tasks. Still working on organizing the house, working with a friend on projects analyzing data. Spring coming is also helpful. Set up a gym membership, using health insurance programs . Hoping to get outside more. Working on taking time and being ok with making some changes

Denies medication side effects. Taking trazodone 3-4x/week, continues to be helpful. Has been taking clonazepam nightly for many years. As he's taking multiple medications at bedtime, "I'm not sure what's doing what". Does think that it helps with acute anxiety at night time.

Psychiatric Review Of Systems:
Sleep changes: denies
Appetite changes: denies
Energy changes: sustained improvement
Overwhelming Anxiety: rarely
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: P
arents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia

Psychomotor activity: no agitation or retardation
Mood: "fine"
Affect: more animated than previously but appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

Laboratory:
9/17/24

Problem List Items Addressed This Visit

[table#5]:
	Bipolar 1 disorder (CMS/HHS) - Primary

[table#6]:
Other Visit Diagnoses

[table#7]:
	Cannabis use disorder, severe, dependence (CMS-HCC) (CMS/HHS)
	Posttraumatic stress disorder
	ADHD (attention deficit hyperactivity disorder), combined type
	Borderline personality disorder (CMS-HCC) (CMS/HHS)

[table#8]:

William B Seretta is a 37 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million

dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Today, William endorses sustained improvement in his sleep schedule leading to increase in motivation and activity level as well as trying to improve his appetite. As a result, he reports finding enjoyment in activities for the first time in some time. This is in the setting of relatively recent lamotrigine initiation as well as discussion about the limits of medication efficacy.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Decrease clonazepam to 0.25 mg at bedtime with plan to discontinue

#ADHD
- Patient currently on Adderall 15 mg PRN through his PCP at Intermed
- Counseled on risks of adderall use including on depression, sleep, psychosis, and mania
- MI

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyroxine, lisinopril through PCP

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 235 lbs (3/29/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (8/2024).

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 4 weeks

ELLEN M BROWN, MD
03/13/25

This visit was performed as a Video Visit.

The patient was physically located at Home:

(60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, ELLEN M BROWN, MD, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports a flare-up of his auto-immune issues with significant joint swelling and pain along with headaches, hot flashes and night sweats. Pt states that he is used to most of these symptoms but not usually hot flashes. Pt takes Simponi for this issue. Pt is seeing his PCP soon (1 week) will call to see what blood work is necessary and will ask about need for possible Thyroid level. Otherwise pt reports OK mood
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly Depressed
Affect: stoic
Thought Form: logical and coherent
Thought Content: physical symptoms, medical appt, stable mood
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed Dr Brown
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 03/11/2025 12:28 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	
3.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has another head cold, went out with friends to watch sports at local pub twice this past week and probably was exposed there. Pt states that he believes the root of his lacking motivation stems from his daily rumination about being in Utah before moving to Maine 14 years ago,living free and independent, skiing, sky-jumping and essentially chasing adrenaline rushes with no concern for risks. So combination of grief/loss over youth lost but also a search for new adrenaline rushes like past use of nitrous oxide and more recent gambling. Pt states he always needed a "Re-set" button to take away anxiety. Pt afraid of starting new more healthy pursuits because he always gets carried away, overdoes it and then has to deal with the consequences physically and emotionally. Writer and pt discussed the potential of finding a "governor" for his physical/emotional "engine" so as to pursue healthy passions without fear of losing control.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: Grief/loss, rumination, depressed mood, insight
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with

Electronically signed by Charles, LCSW at 03/04/2025 12:06 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	
PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that his dog, Enzo, was much better after second visit and imaging by vet. Pt relieved but exhausted from having intense anxiety and difficulty sleeping during the last week. Pt stated that he ate rarely, slept only a few hours at a time and took a shower once.Pt reports that he has a new appreciation for his dog and also a new appreciation that his day-t-day fears, anxieties and ruminations are not important and can be ignored when he is focused. Pt states he also has been enjoying a visit from close friend from S.f who now lives in France and is staying in Portland for a few week. Pt has been socializing with friend while he stays in the Old Port. Pt states that this experience has reminded him about the excitement of who he can be when not trapped by his depressing routines.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: dog in recovery, relief/exhaustion, gratitude, improved mood with increased socialization
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 02/25/2025 12:10 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	Posttraumatic stress disorder	

| 3. | Attention deficit hyperactivity disorder (ADHD), combined type | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports tearfully that his 13 year old dog who has been his constant and supportive companions had had urgent medical issues, took him to vet over weekend where they could not find any problems but today dog is in clear distress and pt will be taking him to vet right after session and fears that he might have to make a decision to put Enzo down. Writer assisted pt in processing initial symptoms of grief/loss, provided empathic listening and support.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: Sad
Thought Form: logical and coherent
Thought Content: pt saddened with grief over possible termination of his beloved dog
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 02/18/2025 1:29 PM EST

2.	ADHD (attention deficit hyperactivity disorder), combined type	
3.	PTSD (post-traumatic stress disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports having just identified first hemorrhoid , very uncomfortable and a lot of pain, disrupting sleep. Pt states that he called his PCP and will be seen tomorrow. Pt would ike to start planning transition from Dr Brown to ant attending physician to have more consistent long term treatment with complex problems.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content:
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 02/04/2025 9:31 PM EST

E&M Follow Up Note

Identifying Information:
Name: William B Seretta

DOB: 5/2/1987
MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: ""

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. He sees Charles Morris for individual therapy.

-States that things are "going alright, a little better than a few weeks ago...a lot of things had caught up to me and I was feeling extra shitty and sick of my situation for so long without me changing anything. It actually helped me. Since then, I've been working hard to having a consistent rhythm to my day". Endorses getting more consistent sleep and feeling more productive. He is waking up earlier so he is feeling more tired at nighttime. He endorses taking trazodone as needed a few times a week.

-Discusses that he was "lying around waiting for something to happen" and was feeling "fed up" with where he was at. Discusses how he has a "long list of things to do and I get overwhelmed" when he spends time thinking about it. Trying to do things in the moment instead of waiting. States that he is "sick of feeling sorry for myself". Has been spending time cleaning and is nice to see visual results. Endorses that he is trying to improve his diet and is showering every day. Eating more fruit and decreasing his sodium and processed foods and attempt to continue losing weight. Has lost 35 pounds since coming off of Seroquel and his liver enzymes were back within normal limits on lab results yesterday. Regarding these changes, William states that he is "in disbelief of myself, I forgot what it felt like to be alive".

-States that he is feeling good about his medications and does think that lamotrigine could be contributing to the above changes. Endorses cutting back on cannabis to twice weekly use. States that he is finding enjoyment in things with the first time in a long time including playing video games and watching sports.

Psychiatric Review Of Systems:
Sleep changes: endorses, improved
Appetite changes: denies
Energy changes: endorses, improved with improved sleep
Overwhelming Anxiety: rarely
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain and elevated LFTs

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers

Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up
in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HHS)
•	Bipolar 1 disorder (CMS/HHS)
•	Lyme arthritis (CMS-HCC) (CMS/HHS)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "better"
Affect: more animated than previously but appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278
A1c 4.8

10/29/24
AST 164, ALT 245

12/11/24
AST 57, ALT 76

1/22/25
AST 26, ALT 24

UDS:
8/14/24: positive for amphetamine, THC

	Bipolar 1 disorder (CMS/HHS) - Primary

[table#6]:
Other Visit Diagnoses

[table#7]:
	Cannabis use disorder, severe, dependence (CMS-HCC) (CMS/HHS)
	Attention deficit hyperactivity disorder (ADHD), combined type
	PTSD (post-traumatic stress disorder)
	Borderline personality disorder (CMS-HCC) (CMS/HHS)

[table#8]:

William B Seretta is a 37 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Today, William endorses improvement in his sleep schedule leading to increase in motivation and activity level as well as trying to improve his appetite. As a result, he reports finding enjoyment in activities for the first time in some time. This is in the setting of relatively recent lamotrigine initiation as well as discussion about the limits of medication efficacy.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety

#ADHD
- Patient currently on Adderall 15 mg PRN through his PCP at Intermed
- Counseled on risks of adderall use including on depression, sleep, psychosis, and mania
- MI

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
#Hyp
erlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs now wnl with discontinuation of quetiapine, following with Portland Gastro
- On levothyroxine, lisinopril through PCP

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 235 lbs (3/29/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (8/2024).

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 3/10 30 min telehealth med mgmt

ELLEN M BROWN, MD
