OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS-HCC) (CMS/HHS) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

| 3. | Cannabis use disorder, severe, dependence (CMS-HCC) (CMS/HHS) | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has had the Flu for the better part of this week, is feeling much better now and also in a better mood. Writer discussed consult with Tx team about possible treatment alternative which included possible TMS or EMDR for possible PTSD (Dr Brown not present at Tx Team mtg) and no specific medication recommendations were made. Writer discussed TMS and EMDR and some potential referrals if he and Dr Brown thought these might be useful . Pt reported that he has been suffering from depression since his 20's, feels dependent on his mom and his dog and plans to discuss specialty treatments for depression and PTSD as well as medications with Dr Brown when he meets with her next week.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: depressive symptoms, additional treatment strategies, mtg with Dr Brown
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult with Dr Brown
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 01/21/2025 9:43 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS-HCC) (CMS/HHS) **	
2.	Posttraumatic stress disorder	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has not been feeling great but OK. Pt states that he has been experiencing cold symptoms for 6 weeks, also joint swelling. Pt states that he is acutely depressed,passive escape is to sleep as much as possible to avoid "as much as possible". Pt wonders about the absence of a trial of an anti-depressant medication after taper from Seroquel due to excessive elevation of liver enzymes. Pt has lost 25 lbs since October 2024, requests review of medications, discussion with Dr Brown. Writer will discuss case at Treatment Team mtg.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content:
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult with Dr Brown and Treatment Team
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 01/13/2025 9:38 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

**DURATION OF SERVICE: 30 minutes **
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS-HCC) (CMS/HHS) **	
2.	PTSD (post-traumatic stress disorder)	

| 3. | Attention deficit hyperactivity disorder (ADHD), combined type | |
| | |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has had a bad head cold and has been in bed since last Sunday.Pt went with friend to see Christmas lights at Botanical Gardens in Boothbay Harbor which was nice but it was a 2 mile walk in dark and cold and he couldn't move for the next 2 days afterwards. Pt also reports that his only computer just died which is very frustrating because mot of what he does to cope with his depression is to be online and also manage investments (stock market lost 1000 pts since loss of computer). Pt saw Dr Brown yesterday with no med changes, fears that there is not much support for his depressive symptoms and too much emphasis on his possibly suffering a manic episode which has not occurred in more than 2 years. Pt mildly hopeful that maximum dose of Lamictal for next month may help his symptoms.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "I'm the same"

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. He sees Charles Morris for individual therapy.

-States that things are "going ok", has a cold right now and his ankles and knees are swelling up. Gets sick frequently during the wintertime as he is immunosuppressed.

-States that "mentally I been feeling fine". States that the holidays are okay but "I got be careful whoever around". He does not like going to other people's houses and getting as the same question over and over at holiday parties. He has one close friend that "knows what is going on" but they do not talk about William's physical and mental health regularly. States that his family is "pretty concerned" and they usually know how he is feeling. Has been living with his family again for 11 years which is "very safe and comfortable" but he feels like he does not have "any freedom or privacy". Has 1 older sister who is in Portland who is married and expecting a baby and a half sister in Massachusetts who is 10 years older than him. He has a good relationship with a sister in Portland but she is pretty busy and "a little fragile to talk to". Has some other acquaintances/friends but is where they sees him. He would like to see more people but "it has been hard this last decade. it was totally different when I lived out west". Feels that he has lost a lot of interest in things and has difficulty relating to others with his deterioration in physical and mental health.

-States that he "has not noticed too much" on the lamotrigine. Recently went up to 200 mg. States that it's "not hurting" and he is "feeling optimistic".

-Tells me that "things are kind of the same... The days were together". When he does feel different is because of something negative happening like sickness or pain. Endorses that he does not have things to look forward to. Things that make him feel better include being helpful like cleaning up around the house. However, he feels like his tasks are not big enough to be a success and he depends on instant gratification. When he lived out west, he did hide adrenaline activities like skiing which he is not able to do now. Enjoy spending time with his dog but now has concerns about his dog dying.

Psychiatric Review Of Systems:
Sleep changes: denies
Appetite changes: denies
Energy changes: chronically fatigued
Overwhelming Anxiety: no changes
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 b
eers
Cannabis: yes, 2-3 times per week at night
Cocaine: no

Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions

	PTSD (post-traumatic stress disorder)

[table#8]:

William B Seretta is a 37 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is

hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Today, William continues to endorse significant difficulties with sleep, energy level, and mood. William has presented with this persistent dysphoria for sometime and identifies difficulties in self-esteem and motivation as contributing. I also wonder about the role of persistent cannabis and stimulant use. As William himself discusses, improvements in sleep hygiene such as spending more time out of bed and exercising would likely be more therapeutic than further pharmacotherapy given his habits.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

#Bipolar Disorder with psychotic features
- Continue lamotrigine 200 mg daily
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety
- UDS performed today, unremarkable

#ADHD
- Patient currently on Adderall 15 mg PRN through his
PCP at Intermed
- Counseled on risks of adderall use including on depression, sleep, psychosis, and mania
- MI

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs improving, following with Portland Gastro
- On levothyroxine, lisinopril through PCP

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 234 lbs (2/2/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (8/2024).

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 1/23 30 min telehealth med mgmt

ELLEN M BROWN, MD
12/20/24

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, ELLEN M BROWN, MD, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS-HCC) (CMS/HHS) **	
2.	GAD (generalized anxiety disorder)	
3.	Attention deficit hyperactivity disorder (ADHD), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt and writer accompanied by Frank Sinnock, graduate Social Work Intern with permission of patient. Pt reports that he had a good family Thanksgiving, working with mother to clean-up and organize basement in preparation for his moving back downstairs with associated privacy. Pt taking his Adderall every day and noticing improved mood and energy to initiate and follow through with tasks. Palso reports that his sister is pregnant and he will be an uncle for the first time. Pt states he has been socializing with old time female friend and getting out more, will be going to Boothbay Harbor next Wednesday to see the light display with her. Instead of talking directly about PTSD symptoms pt shared that his depression stems mostly from sense of guilt/shame associated with not living up to his and other's expectations and that this is all there is or will be. Writer and pt discussed grounding and breathing techniques to stay out of past and future when rumination becomes overwhelming.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: improved mood, more social interaction, med compliance, regret/guilt/shame and grounding
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Brown

Electronically signed by Charles, LCSW at 12/09/2024 2:57 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar II disorder, most recent episode major depressive (CMS-HCC) (CMS/HHS) **	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he is doing a little better. Pt states he would like to see his medical records from his hospitalization 2 years ago because a succession of psychiatric providers keep bringing up behaviors and findings that are now 2 years old and he is largely unaware of. Pt reports continued memories of traumatic events, would like to discuss PTSD symptoms during next session. Pt continuing increased titration of Lamictal , is hopeful and was happy to have finally sold hiscar after years of attempts.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content:
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Brown.

Electronically signed by Charles, LCSW at 11/25/2024 11:33 PM EST

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "I'm the same"

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. He sees Charles Morris for individual therapy.

-Discuss that therapist Charles has reached out and expressed his concern about William. Regarding this, "what I think is going on is there has been a lot of things that have all come together at the same time. I was overwhelmed.
We're talking about some stuff that is helpful but also putting it right back in the front of my head. I feel a little better now than I did". "I'm letting myself be more vulnerable. It might appear that it's more but it's me being able to vocalize some things..past trauma that I have been holding in for a decade and a half that I have never vocalized with anyone". States that this "was not a major swing in either direction" and not "any worse than the norm". "There aren't ever any highs, my baseline is really bad".

-Regarding prior medication trials, he states that he has tried "quite a few things in the past" including antidepressants and wonders if we should trial these again. States that he is not concerned about having a manic episode and in fact would like to be manic. Discuss that antidepressants can disrupt the course of bipolar disorder and the significant risks associated with antidepressant treatment including possibility of worsening depression. "Everyone has been very convinced that I'm going to have another manic episode...that's not how it works for me". Discuss my thoughts that medications are secondary compared to therapy and behavioral interventions.

-Regarding prior manic episode: "It was really bad, I can't explain it". States that he was not interested in engaging with treatment team at the hospital. Thinks that his mania was due to whippets despite his prolonged hospitalization.

Psychiatric Review Of Systems:
Sleep changes: denies
Appetite changes: denies
Energy changes: chronically fatigued
Overwhelming Anxiety: no changes
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and
older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	clonazePAM (KlonoPIN) 0.5 MG Tab	TAKE 1 TABLET BY MOUTH NIGHTLY AS NEEDED FOR ANXIETY
•	lamoTRIgine (LaMICtal) 25 MG Tab	Take 1 Tablet (25 mg total) by mouth daily for 14 days, THEN 2 Tablets (50 mg total) daily for 14 days, THEN 4 Tablets (100 mg total) daily for 7 days, THEN 8 Tablets (200 mg total) daily.
•	lithium	900 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.
•	traZODone (DESYREL)	50 mg, Oral, Nightly PRN

Taken as prescribed: Yes
Medication response: fair
Side effects: none
Prescription Monitoring Program checked today: Yes

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HHS)
•	Bipolar 1 disorder (CMS/HHS)
•	Lyme arthritis (CMS-HCC) (CMS/HHS)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "not different"
Affect: blunted

Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278
A1c 4.8

10/29/24
AST 164, ALT 245

UDS:
8/14/24: positive for amphetamine, THC

	Bipolar 1 disorder (CMS/HHS) - Primary

[table#6]:
Other Visit Diagnoses

[table#7]:
	ADHD (attention deficit hyperactivity disorder), combined type
	Cannabis use disorder, severe, dependence (CMS-HCC) (CMS/HHS)
	Borderline personality disorder (CMS-HCC) (CMS/HHS)

[table#8]:

William B Seretta is a 37 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Today, William continues to endorse significant difficulties with sleep, energy level, and mood. William has presented with this persistent dysphoria for sometime and identifies difficulties in self-esteem and motivation as contributing. I also wonder about the role of persistent cannabis and stimulant use. As William himself discusses, improvements in sleep hygiene such as spending more

time out of bed and exercising would likely be more therapeutic than further pharmacotherapy given his habits.

Regarding the possibility of antidepressant treatment, William has a history of one prolonged manic episode that lasted for weeks. I am skeptical that this was an entirely substance induced episode given that his mania continued in the absence of substance use and with concurrent medication treatment. I am concerned about the possibility of antidepressant treatment given the evidence that antidepressants disrupt the course of bipolar disorder meaning that it could lead to mania or worsening depression. Additionally, there is the phenomenon of antidepressant-associated chronic irritable dysphoria in patients with a bipolar spectrum disorder. My preference at this time is to continue lamotrigine titration which is indicated for bipolar depression. Additionally, lithium is also indicated for bipolar depression.

#Bipolar Disorder with psychotic features
- Continue lamotrigine ramp, just increased to 50 mg. Advised William about potential for rash and to notify the office immediately if a rash were to emerge.
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety
- UDS performed today, unremarkable

#ADHD
- Patient currently on Adderall 15 mg PRN through his PCP at Intermed
- Counseled on risks of adderall use including on depression, sleep, psychosis, and mania
- MI

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. C
annabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs improving, following with Portland Gastro
- On levothyroxine, lisinopril through PCP

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 234 lbs (2/2/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (8/2024).

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 12/18

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 11/18/2024 11:07 AM EST

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	PTSD (post-traumatic stress disorder)	

**
PRESENTATION *(include relevant medication, substance use and mental status observations)*:** Pt reports feeling physically ill, does not do anything pleasurable, is focused on how quickly he can get back to bed and sleep. Pt states that he would like to consult with Dr Brown about trialing an ant-depressant now that he has tapered off Seroquel. Pt states that he has been on many antidepressant medications (ECT, Prozac, Lexapro, Latuda, amitriptyline) but has not been on Wellbutrin, Zoloft or Effexor. Writer informs pt that he will consult with Dr Brown regarding his symptoms and recommend that she call pt to consult about medications. Pt thankful for discussion today.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: acutely Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: symptoms of depression, medications
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult with Dr Brown

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 11/18/2024 10:30 PM EST

Functional Status - documented as of this encounter

Are you deaf or do you have serious difficulty hearing?

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Are you blind or do you have serious difficulty seeing, even when wearing glasses?

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Do you have serious difficulty walking or climbing stairs? (5 years old or older)

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Do you have difficulty dressing or bathing? (5 years old or older)

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Because of a physical, mental, or emotional condition, do you have difficulty doing errands alone such as visiting a doctor's office or shopping? (15 years old or older)

Answer	Date of Assessment	Author	Status
No	03/11/2022 12:40 PM EST	Nancy, RN	Active

Mental Status - documented in this encounter

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 11/10/2024 5:43 PM EST

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	Posttraumatic stress disorder	

PRESENTATION ***(include relevant medication, substance use and mental status observations)*:** Pt and writer accompanied by Frank Sinnock, graduate Social Work Intern with permission of patient. Pt reports frequent rumination of traumatic thoughts since uncovering hundreds of photos from 10-15 years ago when he was living in Utah. Pt states that these photos put a "time-stamp"on the losses he has experienced in the last 15 years. Pt states that a friend had pointed a gun at him and pulled the trigger before pushing it aside. According to pt this was just one memory recently uncovered and previously repressed. Writer and pt discuss symptoms of PTSD and some grounding and deep breathing techniques to manage his anxiety. Writer will consult with Dr Brown regarding pt's symptoms.
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content:Symptoms of Trauma, including trauma memories, intrusive thoughts, anxiety
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Brown.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 11/12/2024 12:21 AM EST

Plan of Treatment - documented as of this encounter

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "it's hard to fall asleep"

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. He sees Charles Morris for individual therapy. Completed quetiapine taper since our last appointment.

-He was been completely off of quetiapine for the past week. The end of the taper was "very uncomfortable" with significant sleep disturbance. Had AST/ALT testing recently and his numbers continue to improve with quetiapine taper which feels promising. Has lost weight since starting quetiapine taper.

-Continues to feel "mentally stuck" but more recently than usual. We talk about how he was doing a year ago versus now. Describes that not much has changed-was on escitalopram at that time which was not helpful. Does think that he has more realistic expectations regarding medications now than previously-"there will be downsides or side effects to everything".

-Describes a "feeling of impending doom" and feels that he "needs something to differentiate my days". He "can spend days or weeks in bed" where things "blur together". Continues to work with Charles on this which is a positive part of his life.

-He expresses a goal of getting back to work as "I'm not putting myself out there enough to give myself a chance". Believes that this is due to low energy, motivation, and self-confidence. Feels shame around not having a job. However, "it was never like this previously". Had jobs in sales, IT, and web design. His interests now are in finance which he does as a hobby. Worries that he would "let people down" if he had a job due to physical limitations or not meeting expectations.

-Taking trazodone nightly, continues to have "trouble shutting down". He will fall asleep around 4 or 5 am and then "sleep until I have to get up". However, takes his meds around 10 pm as he would like to be going to bed earlier. Discuss that he has a shifted sleep pattern and it will be difficult to change that unless he limits his sleeping in and time in bed. Has made small changes to promote sleep hygiene including taking time out of bed before trying to go to sleep. Expresses that he "always wants to be in bed" as it is a "safe space" for him.

-Discuss medication options for bipolar depression. Had a previous trial of lamotrigine which he does not remember-was on numerous meds in combination when previously took. Discuss that this would be my recommendation due to it's indication for bipolar depression and relatively few side effects. He is in agreement with a repeat trial. Shared my concern that adderral may be contributing to his depression.

Psychiatric Review Of Systems:
Sleep changes: disrupted with quetiapine taper
Appetite changes: reduced with quetiapine taper
Energy changes: chronically fatigued
Overwhelming Anxiety: no changes
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram \

(sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects

•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	clonazePAM (KlonoPIN) 0.5 MG Tab	TAKE 1 TABLET BY MOUTH NIGHTLY AS NEEDED FOR ANXIETY
•	lithium	900 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.
•	traZODone (DESYREL)	50 mg, Oral, Nightly PRN

Taken as prescribed: Yes
Medication response: fair
Side effects: sleep disruption with quetiapine taper

Prescription Monitoring Program checked today: Yes

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HHS)
•	Bipolar 1 disorder (CMS/HHS)
•	Lyme arthritis (CMS-HCC) (CMS/HHS)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "unmotivated"
Affect: blunted
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this
visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

Laboratory:
9/17/24
AST 196, ALT 278
A1c 4.8

10/29/24
AST 164, ALT 245

UDS:
8/14/24: positive for amphetamine, THC

Data Reviewed:
Epic reviewed

Assessment and Plan:
[table#4]:
Problem List Items Addressed This Visit

[table#5]:
	Bipolar 1 disorder (CMS/HHS)

[table#6]:
Other Visit Diagnoses

[table#7]:
	Bipolar 2 disorder (CMS-HCC) (CMS/HHS) - Primary

	ADHD (attention deficit hyperactivity disorder), combined type
	Borderline personality disorder (CMS-HCC) (CMS/HHS)
	Long term current use of antipsychotic medication
	GAD (generalized anxiety disorder)
	Cannabis use disorder, severe, dependence (CMS-HCC) (CMS/HHS)

[table#8]:

William B Seretta is a 37 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Today, William continues to endorse significant difficulties with sleep, energy level,and mood. William has presented with this persistent dysphoria for sometime and identifies difficulties in self-esteem and motivation as contributing. I also wonder about the role of persistent cannabis and stimulant use. It is reasonable to trial lamotrigine for bipolar depression and is more favorable option than a second generation antipsychotic given William's goal of weight loss. As William himself discusses, improvements in sleep hygiene such as spending more time out of bed and exercising would likely be more therapeutic than further pharmacotherapy given his habits.

#Bipolar Disorder with psychotic features
- Start lamotrigine 25 mg. Will increase to 50 mg after two weeks. Advised William about potential for rash and to notify the office immediately if a rash were to emerge.
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety
- UDS performed today, unremarkable

#ADHD
- Patient currently on Adderall 15 mg PRN through his PCP at Intermed
- Counseled on risks of adderall use including on depression, sleep, psychosis, and mania
- MI

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant u
se; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs improving, following with Portland Gastro
- On levothyroxine, lisinopril through PCP

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 234 lbs (2/2/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (8/2024).

ROI signed for patient's former psychiatrist, Dr. Abernathy.

ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 11/16

ELLEN M BROWN, MD

OUTPATIENT INDIVIDUAL PROGRESS NOTE
,

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	Attention deficit hyperactivity disorder (ADHD), combined type	

| |

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt and writer accompanied by Frank Sinnock, graduate Social Work Intern with permission of patient. Pt reports that he spent the last week in bed depressed after "crashing" from a possible hypomanic episode last week. Pt states that he is used to these kinds of cycles where he is depressed for a year and then up and enjoying life for about a week before craching down again. Pt reports that during this week he has had selective memories return to him since largely having been erased by his ECT treatment. Unfortunately these selective memories are traumatic and anxiety provoking..Pt reports that recent Liver functioning labs have continued to improve with his Seraquel taper. Writer urged pt to callmed-refill line to leave message concerning his symptoms and request call-back and writer informed pt he would also message Dr Brown about his symptoms.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: symptoms of depression,traumatic memories, increased anxiety, improved liver functioning labs
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 11/05/2024 4:53 PM EST

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "it's hard to fall asleep"

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. He sees Charles Morris for individual therapy. Spoke with William over the phone on 10/18 due to sleep disturbance during his quetiapine taper. Started 50 mg trazodone at that time.

-States that trazodone worked well the first two nights but he had difficulty falling asleep last night as his mind was racing. No side effects, feels groggy in the morning at baseline.

-Now on 50 mg of quetiapine nightly. States that his withdrawal symptoms are the worst within the first few days. Discussed continuing taper to 25 mg for a week and then discontinuing.

-Sleep and fatigue are chronic issues for William. States that his "brain is most active at night" and he is inconsistent sleep schedule. Will take his nighttime meds around 7 to 8 PM and fall asleep at 1 to 2 AM. He spends most of his time in bed when he is home "except for eating, showering, and using the bathroom" and finds his chronic pain to be relieved when he lies down. Does find that he sleeps better on days when he exercises. We discussed sleep hygiene-William has discussed this with "many" health care providers. We discussed trying to make 1 change that he thinks he can stick with. William discusses going downstairs for an hour before bed to spend time with his dog and not be on his phone. I shared my concerns that Adderall could be disruptive to his sleep, however William feels that he sleeps better on days when he takes Adderall.

-Continues to work with Charles on progressing towards goals.

Psychiatric Review Of Systems:
Sleep changes: disrupted with quetiapine taper
Appetite changes: fine, trying to lose weight
Energy changes: chronically fatigued
Overwhelming Anxiety: decreased
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A'
s. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	clonazePAM (KlonoPIN) 0.5 MG Tab	TAKE 1 TABLET BY MOUTH NIGHTLY AS NEEDED FOR ANXIETY
•	lithium	900 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	QUEtiapine (SEROquel) 25 MG Tab	Take 2 Tablets (50 mg total) by mouth at bedtime for 7 days, THEN 1 Tablet (25 mg total) at bedtime for 7 days.
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.
•	traZODone (DESYREL)	50 mg, Oral, Nightly PRN

Taken as prescribed: Yes
Medication response: fair
Side effects: weight gain with quetiapine
Prescription Monitoring Program checked today: Yes

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HHS)
•	Bipolar 1 disorder (CMS/HHS)
•	Lyme arthritis (CMS-HCC) (CMS/HHS)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "tired"

Affect: blunted
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

Laboratory:
No results found for: "CHOL", "HDL", "LDLDIRECT", "TRIG", "VLDL"

9/17/24
AST 196, ALT 278
A1c 4.8

UDS:
8/14/24: positive for amphetamine, THC

Data Reviewed:
Epic reviewed

Assessment and Plan:
[table#4]:
Problem List Items Addressed This Visit

[table#5]:
	Bipolar 1 disorder (CMS/HHS) - Primary

William B Seretta is a 37 y.o. male with a history of
bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Today, William continues to struggle with sleep disturbance. Although the quetiapine taper is a disruptive factor, William has chronically poor sleep hygiene habits including spending most of his time in bed and using his phone during sleep hours. He also continues to struggle with establishing structure in his life and endorses a consistent lack of motivation. He continues to be interested in medication interventions for depression which we will explore further once his quetiapine taper is completed.

#Bipolar Disorder with psychotic features
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- Continue quetiapine taper-William to decrease to 25 mg x1 week then discontinue
- Continue trazodone 50 mg PRN
- Continue discussing sleep hygiene
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety
- UDS performed today, unremarkable

#ADHD
- Patient currently on Adderall 15 mg PRN through his PCP at Intermed
- Counseled on risks of adderall use including on sleep, psychosis, and mania

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs improving, following with Portland Gastro
- On levothyroxine, lisinopril through PCP

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 234 lbs (2/2/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (8/2024).

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 11/16

ELLEN M BROWN, MD

Teaching Physician Attestation of Resident Supervision

E&M Supervision
I have seen and evaluated the patient and reviewed the patient's medical history, diagnosis, physical exam findings, assessment and plan with the resident, ELLEN M BROWN, MD. I agree with the assessment and plan, with the following additional comments:
[x] I was physically present during the critical or key portions of the service furnished by the resident, ELLEN M BROWN, MD.
[] I performed the critical or key portions of the service myself.

In short, this pt is undergoing a desired slow taper of quetiapine due to over sedation. He has had some sleep disturbance from this, which was at least partially addressed with trazodone. Given his bipolar disorder history, he and Dr Brown are appropriately looking to avoid precipitating a mood episode with this taper and are monitoring closely. No signs of mania or psychosis during this encounter.

This visit was performed as a Video Visit.

The patient was physically located at Home:in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta), Dr Brown, Dr Johnston

I, Douglas N Johnston, MD, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Treat Form in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/patients-visitors/patient-forms-and-notices.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 10/03/2024 3:38 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports attempts to decrease his screen-time which has increased sense of boredom and also sleeping more as avoidance. Pt rates his level of depression as 8/10. Writer and pt discuss sleep hygiene as well as attempts to increase physical movement daily to get back to balance sleep schedule.Pt states he is continuing Seroquel taper which should be finished by end of month and looks forward to meeting with Dr Brown to discuss potential for alternative medications for depression..
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: sad
Thought Form: logical and coherent
Thought Content: depressive sxs, medications
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Participate in an Individual or Group Telehealth Encounter document located in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/Patients-Visitors/Telehealth at the bottom of the page within the Patient Forms box.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 10/08/2024 8:03 AM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt and writer accompanied by Frank Sinnock, graduate Social Work Intern with permission of patient. Pt reports that he is happy to have finally posted his car for sale after long period of working through the emotionalprocess of letting it go. Pt states his mood has been OK,continues to taper Seroquel by 25 mg every 7 days.Pt mentions that he has expereinced frustration and disappointment over finding out incidentally that some friends are voting for republican candidate which has caused pt to reflect on the values and motivations of some of his friends. Writer and pt discuss pt's daily activity of performing role as a Reddit moderator (5-10 hrs a day) and the benefits of reducing his exposure to political content during heated presidential election .
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: stable mood, continue Seroquel taper,frustration re politics,saleof car
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Participate in an Individual or Group Telehealth Encounter document located in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/Patients-Visitors/Telehealth at the bottom of the page within the Patient Forms box.

Patient identification was confirmed using two patient identifiers, Name and DOB.

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt and writer accompanied by Frank Sinnock, graduate Social Work Intern with permission of patient Pt reports that he met recently with Dr Brown, continuing taper off Seroquel, liver functioning labs continue to improve. Pt states that he has up and down moods, anxious about parent's financial stress and toll it has had on his father's mental stability, often ranging from acute depression to arbitrary anger over smallest of matters. Pt states he is trying to eat more nutritionally, difficult due to sleep pattern which still is up late and sleeping until afternoon and only eating at 6PM. Writer and pt discuss sleep hygiene elements which pt is aware of and also the necessity of daily activities/schedule of chores, walk outside and perhaps cooking for family so as to better feel tired when it is time for bed. Pt states he will try this week.

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "It's hard to start things"

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. He sees Charles Morris for individual therapy.

-Endorses feeling more tired recently. We discussed lithium level and other lab results including elevated liver enzymes, however they continue to trend down. Followed by Portland Gastro for this. Discussed elevated triglycerides and cholesterol. William endorses that he has a "sedentary lifestyle and poor diet". Also endorses a family history of high cholesterol. We discussed the possible contribution of quetiapine.

-William states that reducing quetiapine from 200 to 100 mg nightly after our last visit resulted in a number of side effects including poor sleep, headache, reduced appetite, and nausea. This was surprising as he did not have any side effects when reducing quetiapine from 400 to 200 mg. After a few days, the symptoms resolved. He wants to continue decreasing and then discontinue quetiapine as "I do not think it is doing anything good for me". We discuss slowly tapering quetiapine by 25 mg every week.

-States that sleep has been "consistent". He has noticed an increase in the intensity of his dreams following decrease in quetiapine dose. States "I am kind of sick of it" as his dreams are more interesting then being awake.

-Continues to work with Charles on structure, having a reason to get up in the morning, and increasing motivation. Continues to feel that therapy is very beneficial for him. States that most of his structuring a day is around doctors appointments and he "does not do much for fun". States that his days "blur together" and "feel the same". "I need to do something else", and discusses going to the gym and going back to work. Endorses the underlying issue as difficulty initiating things and feels that things get easier once he starts them. Reports that he "works himself up beforehand".

-We discussed staying at the current lithium dose to decrease long term adverse effects. Discussed the possibility of augmenting with lithium. Joint decision making to discuss this following discontinuation of quetiapine.

Psychiatric Review Of Systems:
Sleep changes: increased intensity dreams
Appetite changes: fine, trying to lose weight
Energy changes: feeling more tired
Overwhelming Anxiety: decreased
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on: Fluoxetine, Adderall, Abilify, Lamotrigine, & Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."): Gabapentin, Escitalopram, Risperidone, Latuda (shortness of breath, myalgias)
-Patient reported: Citalopram (sexual side effects), Bupropion, Methylphenidate. Amitriptyline

We have discontinued:
Quetiapine-caused weight gain

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other
street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	clonazePAM (KlonoPIN) 0.5 MG Tab	TAKE 1 TABLET BY MOUTH NIGHTLY AS NEEDED FOR ANXIETY
•	lithium	900 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	QUEtiapine (SEROquel) 25 MG Tab	Take 3 Tablets (75 mg total) by mouth at bedtime for 7 days, THEN 2 Tablets (50 mg total) at bedtime for 7 days, THEN 1 Tablet (25 mg total) at bedtime for 7 days.
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: fair
Side effects: weight gain with quetiapine
Prescription Monitoring Program checked today: Yes

Past Medical History:
[table#3]:
| **Patient Active Problem List** |

| --- |
| Diagnosis |
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HHS)
•	Bipolar 1 disorder (CMS/HHS)
•	Lyme arthritis (CMS-HCC) (CMS/HHS)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "tired"
Affect: blunted
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to
maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

Laboratory:
No results found for: "CHOL", "HDL", "LDLDIRECT", "TRIG", "VLDL"

9/17/24
AST 196, ALT 278
A1c 4.8

UDS:
8/14/24: positive for amphetamine, THC

	Cannabis use disorder, severe, dependence (CMS-HCC) (CMS/HHS)
	Borderline personality disorder (CMS-HCC) (CMS/HHS)
	Lithium use
	Transaminitis

[table#7]:

William B Seretta is a 37 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Today, William continues to struggle with symptoms of depression prominently anhedonia and fatigue. He is attempting to employ behavioral interventions to increase his motivation and ability to do the things that he wants to do. This has been difficult as this is a long-term pattern for him. Unfortunately, William experienced a discontinuation syndrome when reducing Seroquel. We will slowly taper to attempt to avoid this. Following discontinuation of Seroquel, we will continue to explore possible augmentation agents for lithium to treat bipolar depression.

#Bipolar Disorder with psychotic features
- Continue lithium 900 mg nightly
- Level 0.8 August 2024
- discontinue quetiapine
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety
- UDS performed today, unremarkable

#ADHD
- Patient currently on Adderall 15 mg PRN through his PCP at Intermed
- Counseled on risks of adderall use in psychosis and mania

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
#Hyperlipidemia
- Coordinate with patient's PCP's office as appropriate
- LFTs improving, following with Portland Gastro
- On levothyroxine, lisinopril through PCP

Monitoring
- Ht 6
'1" Wt 225lbs BMI 30.1 (6/2022) Wt 234 lbs (2/2/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (8/2024).

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 11/16

ELLEN M BROWN, MD

Narrative

NORDX SCARBOROUGH CAMPUS - 09/18/2024 4:27 AM EDT

Narrative

<18 years: Hemoglobin A1c criteria for diagnosing diabetes have not been established for patients who are <18 years of age.

> or =18 years: Increased risk for diabetes (prediabetes): 5.7-6.4%

Diabetes: > or =6.5%

Falsely low percent A1c may be seen with abnormal hemoglobin variants or shortened erythrocyte survival (such as hemolysis, blood loss and pregnancy).

(ABNORMAL) LIPID PANEL - Final result (09/17/2024 2:18 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Cholesterol	**241 (H)**	See comment mg/dL		09/17/2024 11:46 PM EDT	NORDX SCARBOROUGH CAMPUS	

Comment:

Fasting and Non-Fasting
Desirable: <200 mg/dL
Borderline high: 200-239 mg/dL
High: > or = 240 mg/dL

Triglycerides	**269 (H)**	See comment mg/dL		09/17/2024 11:46 PM EDT	NORDX SCARBOROUGH CAMPUS	

Comment:

Flagging of Abnormals is based on fasting value

Fasting
Normal: <150 mg/dL
Borderline high: 150-199 mg/dL
High: 200-499 mg/dL
Very high: > or = 500 mg/dL

Non-Fasting
Males: <200 mg/dL
Females: <175 mg/dL

HDL Cholesterol	56	See comment mg/dL		09/17/2024 11:46 PM EDT	NORDX SCARBOROUGH CAMPUS	

Comment:

Fasting and Non-Fasting
Males: > or = 40 mg/dL
Females: > or = 50 mg/dL

LDL Cholesterol Calculation	**131 (H)**	0 - 99 mg/dL		09/17/2024 11:46 PM EDT	NORDX SCARBOROUGH CAMPUS	

Comment: Unable to perform calculation

Non HDL Cholesterol Calculation	**185.0 (H)**	See comment mg/dL		09/17/2024 11:46 PM EDT	NORDX SCARBOROUGH CAMPUS	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature

Comment:

```
Fasting and Non-Fasting
Desirable: <130 mg/dL
Above desirable: 130-159 mg/dL
Borderline high: 160-189 mg/dL
High: 190-219 mg/dL
Very high: > or = 220 mg/dL
```

** **

CLIENT REPORT/CONCERN:
[table#1]:
| **1.** | **Bipolar 2 disorder (CMS-HCC) (CMS/HHS) ** | |

| --- | --- | --- |
2.	Lyme arthritis (CMS-HCC) (CMS/HHS)	
3.	ADHD (attention deficit hyperactivity disorder), combined type	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt and writer accompanied by Frank Sinnock, graduate Social Work Intern with permission of patient. Pt reports that in his attempt to extend his section 8 voucher the state informed him that this years funding had run out and that he would be placed back on a waiting list before receiving another voucher. This new was good and bad news to pt who has been ambivalent about leaving his parent's house because they are financially strapped and depend on his paying his share of the rent. Pt states he is very tired lately , feeling depressed, has had increased lucid dreams which are tempting in terms of being more attractive than reality and a source for avoidance. Pt is trying to stay active, doing regular chores, offering to help his parents. Pt intends to get Lithium lab done before his appointment with Dr Brown
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious, emotional
Thought Form: logical and coherent
Thought Content: depressed mood, sleeping issues, problems with section 8 voucher
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Brown

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Participate in an Individual or Group Telehealth Encounter document located in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/Patients-Visitors/Telehealth at the bottom of the page within the Patient Forms box.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 09/16/2024 2:38 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

3.	Polyneuropathy, peripheral sensorimotor axonal	
4.	Lyme arthritis (CMS-HCC) (CMS/HHS)	
5.	Hypothyroidism, adult	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports inability to sleep and feeling ill for 2-3 days after cutting in half his Seroquel medication as instructed. Pt states that he had no problem reducing from 400 to 200 mg but when he went from 200 to 100 mg.it resulted in 2-3 difficult days. Pt feels much better now, sleeping well but is afraid to decrease medication any further until he sees Dr Brown again. Pt urged by writer to call medication refill line to ask for call-back about any concerns or go to ED with medication problems this dramatic in future. This non-sleeping episode also coincided with being unable to socialize with family visitors from away which was saddening. Pt tried to spend some time with Section 8 housing binder but was easily overwhelmed. Writer and pt discuss this process as a desensitizing exercise wherein someone spends only 15 minutes a day with binder for a week and then 20 minutes a day for week until more comfortable and less overwhelmed more curious and less anxious about the material and possible ramifications. Pt stated he will try this plan this week.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content:medication side effects, sleep problems , anxiety, desensitization exercise
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown.

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. I have confirmed at least on an annual basis, the consent for the use of telehealth to conduct an assessment or physical examination, consultation, and diagnosis and treatment, as appropriate per my scope of licensure and/or certification. The additional disclosure regarding the functionality of telehealth services has been disclosed to the patient/legal representative/guardian in the Consent to Participate in an Individual or Group Telehealth Encounter document located in this patient's MyChart patient portal and/or the MaineHealth website at [https://www.mainehealth
.org/Patients-Visitors/Telehealth](https://www.mainehealth.org/Patients-Visitors/Telehealth) at the bottom of the page within the Patient Forms box.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 08/26/2024 8:46 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	Polyneuropathy, peripheral sensorimotor axonal	

3.	Lyme arthritis (CMS-HCC) (CMS/HHS)	
4.	ADHD (attention deficit hyperactivity disorder), combined type	
PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has been feeling "decent" this past week. Pt states that he was happy to meet Dr Brown yesterday in person, made some medication changes which pt is hopeful about. Pt reports that he received results from recent blood work which dramatically reduced Liver functioning levels to almost normal.Pt states he has kept up exercise routine (30 minutes a day) while also paying attention to sleeping at night and being awake during the day, attending medical appointments in person, getting out of the house and that this has allowed him to reduce anxiety and feel more positive. Pt and writer agreed on plan to build-in some new activities, such as section 8 housing search and sale of his car to weekly action plan for next week.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: euthymic
Affect: mildly anxious
Thought Form: logical and coherent
Thought Content: mtg with Dr Brown, med changes, following through on action plans, mood improvement
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. At least on an annual basis, I have confirmed their understanding of the types of services provided, provider identity/contact information; licensure/certification/credentials/qualifications; limitations in drugs/services provided via telehealth; fees for services/cost-sharing responsibilities; payment information; provider financial interests (beyond fees charged); uses/limitations of the technologies, including in emergency situations; privacy/security risks; uses of and response times for electronic messaging; disclosure of PHI and purpose; privacy rights of patients; information collected/passive tracking mechanisms utilized; and other important information. This information is also included in the Consent to Participate in an Individual or Group Telehealth Encounter document located in this patient's MyChart patient portal and/or the MaineHealth website at https://www.mainehealth.org/Patients-Visitors/Telehealth
at the bottom of the page within the Patient Forms box.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 08/19/2024 8:42 AM EDT

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "I'm doing better"

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Patient sees Charles Morris for individual therapy.

-feels that he is "finally" making changes and progress in his life "after a decade".

-started quetiapine in March and "gained 35 to 45 pounds" after a month a half. Since then, has been making lifestyle changes including healthier eating, reducing drinking, and more exercise. This has resulted in intentional weight loss and given William a greater sense of self-efficacy

-wonders about further reduction of quetiapine. Has not noticed a difference since it was decreased from 400 mg to 200 mg. Continues to sleep "too much". Endorses some difficulty with sleep initiation but only when he stays up late on his phone. He is working on regulating his sleep-wake cycle and trying to wake up earlier. Has been putting at least one thing on his schedule each day to provide greater structure and a sense of accomplishment.

-feels that lithium has given him a "elevated sense of self" with more positivity. Wonders about increasing lithium dose. Discuss checking level and then making a decision.

-initiated on levothyroxine by his PCP 2-3 months ago. No side effects, believes it is helpful. Liver enzymes have improved to almost normal which he is very relieved about

-has greatly reduced his cannabis use. Now taking 1-2 hits of a vape pen several nights per week. Did not like the feeling that he was developing a tolerance/dependence on cannabis.

-continues to take clonazepam nightly. Open to tapering further, we discuss making the change after discontinuation of quetiapine.

-continues to take adderall prescribed by PCP PRN on days he needs to get things done. We discuss risks of adderall in inducing psychosis/mania.

Psychiatric Review Of Systems:
Sleep changes: trying to regulate sleep-wake cycle
Appetite changes: fine, trying to lose weight
Energy changes: improved
Overwhelming Anxiety: decreased
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on:
Fluoxetine
Adderall
Abilify
Lamotrigine
Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."):
Gabapentin
Escitalopram
Risperidone
Latuda (shortness of breath, myalgias)
-Patient reported:
Citalopram (sexual side effects)
Bupropion
Methylphenidate
Amitriptyline

We have discontinued:
Quetiapine-caused weight gain

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history:
Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	clonazePAM (KLONOPIN)	0.5 mg, Oral, Nightly PRN
•	lithium	900 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	QUEtiapine (SEROQUEL)	200 mg, Oral, Nightly
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: good
Side effects: weight gain with quetiapine
Prescription Monitoring Program checked today: Yes

Past Medical History:

[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HHS)
•	Bipolar 1 disorder (CMS/HHS)
•	Lyme arthritis (CMS-HCC) (CMS/HHS)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "better"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

	GAD (generalized anxiety disorder)
	Cannabis use disorder, severe, dependence (CMS-HCC) (CMS/HHS)
	Hypothyroidism, adult
	ADHD (attention deficit hyperactivity disorder), combined type

[table#9]:

William B Seretta is a 37 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.
9/5/23: Ongoing depression, starting escitalopram.
10/4/23: Ongoing depression, despite starting escitalopram 3 weeks prior. Difficulty falling asleep, even taking clonazepam nightly.
11/1/23: Ongoing depression, difficulty falling asleep, then sleeping more than 12 hours, and anxiety. Increased impulsivity, with return to gambling. Given minimal effect and concern for activation, decreased escitalopram. Also decreasing clonazepam.
11/20/23: Worsening anxiety since decreasing clonazepam. Low mood and difficulty falling asleep, then sleeping excessively. Plan to start quetiapine, taper off of escitalopram. Elevated LFTs noted, plan to recheck in several weeks.
1/5/24: Reports improved sleep and anxiety since star
ting quetiapine. Discontinuing Depakote due to LFTs.
2/2/24: Ongoing low mood and motivation. Able to fall asleep, but difficulty getting out of bed. Patient feels this is due to lack of structure to his days rather than morning drowsiness. Discussed sleep hygiene and adding structure. Elected to taper gabapentin due to lack of perceived benefit. Requesting an antidepressant.
3/1/24: William reports ongoing low mood, low motivation, and excessive sleep. He continues to spend much of his waking hours lying in bed, though he acknowledges that inactivity causes his joint pain to worsen. His anxiety has increased, which he attributes to tapering gabapentin. Dr. Abernathy's records were useful in clarifying her diagnostic impressions and his past medication history. After reviewing risks and benefits of starting lithium to target mood, William verbally consents. He is being followed by Portland Gastro for transaminitis and is getting labs drawn weekly, so will be able to have lithium monitoring labs drawn as well.
6/17/24: Mood appears stable on current medication regimen. Advised patient that next provider might not feel comfortable with prescribing a benzodiazapine with concurrent adderall script. Will continue for now given patient is stable and I am not planning

on follow-up with him. PCP currently prescribes adderall. Will continue current medications.

Today: improved mood with therapy, lifestyle changes, and lithium initiation. These factors have also contributed to increased self-efficacy and sense of fulfillment.

#Bipolar Disorder with psychotic features
- Continue lithium 900 mg nightly
- Level ordered today
- decrease quetiapine to 100 mg nightly
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety
- UDS performed today, unremarkable

#ADHD
- Patient currently on Adderall 15 mg PRN through his PCP at Intermed
- Counseled on risks of adderall use in psychosis and mania

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use, has been reducing
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
#Lyme Disease
#Transaminitis
#Hypothyroidism
- Coordinate with patient's PCP's office as appropriate
- LFTs improving, following with Portland Gastro
- On levothyroxine, lisinopril through PCP

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 234 lbs (2/2/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (8/2024).

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: up to date

Follow up: 9/18

Charles, LCSW - 08/08/2024 4:00 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	Polyneuropathy, peripheral sensorimotor axonal	

3.	Lyme arthritis (CMS-HCC) (CMS/HHS)	
4.	Hypothyroidism, adult	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that his appointment with Dr Brown had been re-scheduled due to illness, will meet her for first time next Wednesday. Pt states he has been active this last week as requested by writer, has been exercising 30 minutes a day, counting his steps throughout day. Pt states that anxiety/ fear still a impediment to getting out of house more often, has been used to using Reddit as distraction. Pt sleeping a little less, attempting to keep to a schedule where he is sleeping more at night rather than the day. Pt states he is looking forward to meeting Dr Brown next week.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: proud of himself for exercising, fear and anxiety
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown as necessary

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at home .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian's consent to this telehealth visit. At least on an annual basis, I have confirmed their understanding of the types of services provided, provider identity/contact information; licensure/certification/credentials/qualifications; limitations in drugs/services provided via telehealth; fees for services/cost-sharing responsibilities; payment information; provider financial interests (beyond fees charged); uses/limitations of the technologies, including in emergency situations; privacy/security risks; uses of and response times for electronic messaging; disclosure of PHI and purpose; privacy rights of patients; information collected/passive tracking mechanisms utilized; and other important information. This information is also included in the Consent to Participate in an Individual or Group Telehealth Encounter document located in this patient's MyChart patient portal and/or the MaineHealth website at [https://www.mainehealth.org/Patients-Visitors/Telehealth] (https://www.mainehealth.org/Patients-Visitors/Telehealth)
at the bottom of the page within the Patient Forms box.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 08/13/2024 11:16 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes

** **

CLIENT REPORT/CONCERN:

[table#1]:

1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	ADHD (attention deficit hyperactivity disorder), combined type	

3.	Polyneuropathy, peripheral sensorimotor axonal	
4.	Lyme arthritis (CMS-HCC) (CMS/HHS)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he continues with low energy, low motivation, lack of pleasure in doing things. Pt states he has tried to be more active, has helped parents with household chores and some projects. Pt has appt with Dr Brown on 8/5, looks forward to discussing medication regime.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content:Depressive symptoms, appt with new psychiatrist, medication concerns
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Brown as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

I, Charles L Morris, LCSW, have confirmed the patient/legal representative/guardian’s consent to this telehealth visit. At least on an annual basis, I have confirmed their understanding of the types of services provided, provider identity/contact information; licensure/certification/credentials/qualifications; limitations in drugs/services provided via telehealth; fees for services/cost-sharing responsibilities; payment information; provider financial interests (beyond fees charged); uses/limitations of the technologies, including in emergency situations; privacy/security risks; uses of and response times for electronic messaging; disclosure of PHI and purpose; privacy rights of patients; information collected/passive tracking mechanisms utilized; and other important information. This information is also included in the Consent to Participate in an Individual or Group Telehealth Encounter document located in this patient’s MyChart patient portal and/or the MaineHealth website at [https://www.mainehealth.org/Patients-Visitors/Telehealth] (https://www.mainehealth.org/Patients-Visitors/Telehealth)
at the bottom of the page within the Patient Forms box.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: .
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports he feels more depressed, continues with no energy, anhedonia, over sleeping. Pt concerned that an appt with PCP and labs were cancelled by mistake, would like to have more info on his liver condition. Pt and writer discuss stressor of his section 8 housing voucher which needs to be extended by mid-July with paperwork. Pt states that despite low energy he will complete the housing paperwork.Writer and pt discuss importance of initiating motion/action despite not being motivated, increasing a sense of agency over things he can control.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content:depressive symptoms, section 8 housing, action-planning
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Henderson as necessary

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 07/02/2024 11:05 PM EDT

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 37 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD (Intermed)

Chief Complaint: "I'm doing okay"

HPI: William B Seretta is a 37 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Last seen Dr. Mueller on 3/1/24. Patient sees Charles Morris for individual therapy.

- Mood is "okay."
- Dealing with Lyme's disease. Recent liver biopsy. Elevated LFT's from 6/6/24. PCP is aware. Patient reports that these are performed from prior labs.
- Taking seroquel 200mg at night.
- Sleeps a lot. At least 12 hours per day. Never feels rest.
- Lives in Yarmouth with parents. On SSDI for Lyme Disease.
- Takes 1-2 doses of Adderall on days when he has something going on. Prescribed by PCP.
- No longer vaping nicotine. Uses cannabis 2-3 times per week. Occasional alcohol use, patient advised against given current LFTs.

Psychiatric Review Of Systems:
Sleep changes: 12 hours per day, feels tired
Appetite changes: fine, trying to lose weight
Energy changes: low energy
Overwhelming Anxiety: yes at times, klonopin helpful for that
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

**Past Psych History **
Suicide Attempts: No

Outpatient treatment: Previously seen by Dr. Abernathy.

Inpatient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on:
Fluoxetine
Adderall
Abilify
Lamotrigine
Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."):
Gabapentin
Escitalopram
Risperidone
Latuda (shortness of breath, myalgias)
-Patient reported:
Citalopram (sexual side effects)
Bupropion
Methylphenidate
Amitriptyline

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: denies current use
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 2-3 times per week at night
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this. Patient has been on SSDI for the last 9 years.

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents in Yarmouth. ON SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen
Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	clonazePAM (KLONOPIN)	0.5 mg, Oral, Nightly PRN
•	gabapentin (NEURONTIN)	300 mg, Oral, Nightly
•	lithium	900 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	QUEtiapine (SEROquel) 100 MG Tab	Take 3 Tablets (300 mg total) by mouth at bedtime for 30 days, THEN 2 Tablets (200 mg total) at bedtime.
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: No, is taking PRN clonazepam every night rather than PRN
Medication response: Minimal
Side effects: ? sedation
Prescription Monitoring Program checked today: Yes, patient last filled adderall on 5/23/24, patient last filled klonopin on 5/16/24

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HHS)
•	Bipolar 1 disorder (CMS/HHS)
•	Lyme arthritis (CMS-HCC) (CMS/HHS)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation

Mood: "I'm okay"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms.

[table#7]:
Other Visit Diagnoses

[table#8]:
	Anxiety

[table#9]:

William B Seretta is a 37 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.
9/5/23: Ongoing depression, starting escitalopram.
10/4/23: Ongoing depression, despite starting escitalopram 3 weeks prior. Difficulty falling asleep, even taking clonazepam nightly.
11/1/23: Ongoing depression, difficulty falling asleep, then sleeping more than 12 hours, and anxiety. Increased impulsivity, with return to gambling. Given minimal effect and concern for activation, decreased escitalopram. Also decreasing clonazepam.
11/20/23: Worsening anxiety since decreasing clonazepam. Low mood and difficulty falling asleep, then sleeping excessively. Plan to start quetiapine, taper off of escitalopram. Elevated LFTs noted, plan to recheck in several weeks.
1/5/24: Reports improved sleep and anxiety since starting quetiapine. Discontinuing Depakote due to LFTs.
2/2/24: Ongoing low mood and motivation. Able to fall asleep, but difficulty getting out of bed. Patient feels this is due to lack of structure to his days rather than morning drowsiness. Discussed sleep hygiene and adding structure. Elected to taper gabapentin due to lack of perceived benefit. Requesting an antidepressant.
3/1/24: William reports ongoing low mood, low motivation, and excessive sleep. He continues to spend much of his waking hours lying in bed, though he acknowledges that inactivity causes his joint pain to worsen. His anxiety has increased, which he attributes to tapering gabapentin. Dr. Abernathy's records were useful in clarifying her diagnostic impressions and his past medication history. After reviewing risks and benefits of starting lithium to target mood, William verbally consents. He is being followed by Portland Gastro for transaminitis and is getting labs drawn weekly, so will be able to have lithium monitoring labs drawn as well.
6/17/24: Mood appears stable on current medication regimen. Advised patient that next provider might not feel comfortable with prescribing a benzodiazapine with concurrent adderall script. Will continue for now given patient is stable and I
am not planning on follow-up with him. PCP currently prescribes adderall. Will continue current medications.

#Bipolar Disorder with psychotic features
- Continue 900 mg nightly, labs up to date
- Continue quetiapine 200 mg nightly
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety
- **Patient aware that he needs annual utox**

#ADHD
- Patient currently on Adderall 20 mg BID through his PCP at Intermed
- I advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse. Also increased risk of depressive episodes.
- Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change. Cannabis use is 2-3 times per week.
- MI around current cannabis use.
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy

#Lyme Disease
#Transaminitis
- Coordinate with patient's PCP's office as appropriate
- **Patient advised to follow-up with PCP regarding recent elevated LFT's **

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 234 lbs (2/2/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (2/2024).

ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Treatment Plan: needs to be updated, unable to complete due to time constraints of visit

Follow up: 1 month with new resident

Rachel E Henderson, MD
06/17/24

TELEHEALTH ATTESTATION

This visit was performed as a Video Visit.

The patient was located at home the provider was located at McGeachey Hall in Portland, ME

The following individuals were present during the telemedicine encounter: Patient, resident

Verbal consent was obtained from the patient. The consent can be located on the MaineHealth website at [www.Mainehealth.org] (http://www.mainehealth.org/) > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed via (Picture). Encounter over video.

I certify that I spent 30 minutes in contact with the patient.

The medical record was reviewed as part of this encounter.

Electronically signed by Rachel Henderson, MD at 06/17/2024 3:45 PM EDT

Results - documented in this encounter

US ABDOMEN PELVIS VASCULAR STUDY COMPLETE - Final result (06/14/2024 8:04 AM EDT)

Anatomical Region	Laterality	Modality
Visceral, Abdomen, Pelvis, Hip, Vascular		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			06/14/2024 7:30 AM EDT	

Narrative

06/14/2024 8:28 AM EDT
EXAM: US ABDOMEN PELVIS VASCULAR STUDY COMPLETE

INDICATION: increasing LFTs, ?thrombus

COMPARISON: None.

TECHNIQUE: Grayscale and duplex Doppler imaging of the right upper quadrant and associated vasculature was performed.

FINDINGS: There is homogeneous liver echotexture without focal mass. There is no biliary dilation, with the common bile duct measuring 4 mm caliber.

There is no cholelithiasis, gallbladder wall thickening, or pericholecystic fluid. Visualized portions of pancreas, kidneys, and spleen are normal.

Doppler interrogation demonstrates normal flow direction and waveform morphology within the hepatic and portal veins. Splenic vein and hepatic arterial waveforms are similarly normal.

IMPRESSION: Unremarkable exam.

WORKSTATION: SPECTRUMHOME7

* * THIS IS AN ELECTRONICALLY VERIFIED REPORT CREATED USING VOICE RECOGNITION * * 6/14/2024 8:26 AM

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	GAD (generalized anxiety disorder)	
3.	Severe cannabis use disorder (CMS/HHS)	
PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports continued depressed mood, concerns about liver functioning. Pt saw PCP, most recent Liver labs improved but way too high. Pt also reports concern about his section 8 voucher which needs to be extended due to pt's current focus on medical problems. Pt will request and fill-out renewal form which can be augmented with possible letter from psychiatric and medical providers. Writer discussed plan to transfer continued psychiatric med management with attending physician Dr Johnson starting in late August with Dr Henderson covering until then.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: symptoms of depression, medical and housing concerns
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Henderson as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 06/19/2024 7:33 AM EDT

Results - documented in this encounter

EPSTEIN-BARR VIRUS DNA, QN, PLASMA - Final result (06/06/2024 2:23 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Epstein-Barr Virus DNA, QN, P	Undetected	Undetected IU/mL		06/09/2024 5:20 PM EDT	MAYO CLINIC LABORATORIES	

Comment:

```
Result in log IU/mL is Undetected.

------------------ADDITIONAL INFORMATION------------------
The quantification range of this assay is 35 to 100,000,000
IU/mL (1.54 log to 8.00 log IU/mL). Testing was performed
using the cobas EBV test (Roche Molecular Systems, Inc.).

Test Performed by:
Mayo Clinic Laboratories - Rochester Superior Drive
3050 Superior Drive NW, Rochester, MN 55905
Lab Director: William G. Morice M.D. Ph.D.; CLIA# 24D1040592
```

Narrative

Test Method:
Real-Time PCR assay to detect and differentiate HSV-1 and HSV-2

NOTE:
A negative result does not eliminate the possibility of herpes simplex virus (HSV) infection. This assay is only to be used for patients with a clinical history and symptoms consistent with HSV infection, and must be interpreted in the context of clinical symptoms.
This test was developed and its performance characteristics determined by NorDx consistent with CLIA requirements. It has not been cleared or approved by the U.S. Food and Drug Administration (FDA). This test is used for clinical purposes and should not be regarded as investigational or for research.

Charles, LCSW - 06/06/2024 3:26 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN:
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	Lyme arthritis (CMS-HCC) (CMS/HHS)	
3.	Borderline personality disorder (CMS-HCC) (CMS/HHS)	
PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that his family only has one car due to extended repair problems with second car which has the effect of limiting pt's ability to attend medical appts. Pt was able to due labs for liver functioning which improved (1700>900). Pt also able to do Thyroid lab indicating low therapeutic level, Levothyroxide increased (50>75 mg), Pt states that he doesn't feel any different, mostly depressed with anhedonia , low energy. Pt encouraged to request appt with Dr Henderson to discus medications and possible assignment to an attending psychiatrist.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: medical concerns, symptoms of depression
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Henderson as necessary
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 06/10/2024 11:27 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "I'm extremely anxious about my liver enzyme labs which have shot up to 1750 and 1690"
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	GAD (generalized anxiety disorder)	

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he had labs done for GI clinic last week and liver enzyme results were very high. GI was not sure about results, recent (April) biopsy negative for changes since last biopsy 10 years ago. Pt states he has also recently diagnosed with hypothyroidism, started synthroid but does not have a recent lab. Writer and pt discuss recommendation to call PCP to obtain Thyroid lab order and give results of GI labs to PCP and make appt to be seen bt PCP asap. Pt in agreement with plan.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: medical concerns, anxiety and depressive symptoms
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Henderson as necessary

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 06/03/2024 10:38 PM EDT

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 05/28/2024 8:46 AM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "I did my labs but I don't have any results yet"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt states that he continues to experience symptoms of depression such as poor appetite, excessive sleep, low self esteem, low energy and anhedonia.Pt reports that he has been tapering off Seroquel (from 300mg to 200mg/day) and has been on Synthroid for last 6 weeks but has not felt any positive change in his mood/energy. Pt worried about his section 8 voucher for subsidized housing which expires in June. Writer and pt will focus on this next session.
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: depression sxs, labd, meds, housing voucher
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 05/29/2024 9:40 PM EDT

Plan of Treatment - documented as of this encounter

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: " I used my last dose of nightly sleep med last night>"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt states that he often has to go without 1-2 days of sleep meds a month due to 30 day prescription gap between refills. Pt and writer discuss consulting with his physician and Tx Team RN regarding prescription order to go to his pharmacy today but also making a plan to call-in refills 2 days before last dose. Pt states that he has not had labs done, will call PCP to get lab order for Thyroid level and liver functioning. Pt reports continuing depressive symptoms, poor appetite, low energy and anhedonia.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Depressive sxs, med refill problems
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller as necessary.
This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at home .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 05/21/2024 11:52 PM EDT

Progress Notes - documented in this encounter

Charles, LCSW - 05/07/2024 4:54 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "My mood is OK but I am exhausted still"
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	
2.	Hypothyroidism, adult	

**PRESENTATION *(include relevant medication, substance use and mental status observations): ***Pt reports mood has been stable but has been feeling physically exhausted often. Pt states that he did help his parents open up another "Fork" food lab in Portland and parked cars for 2 hours. Pt's birthday is today and so he plans to go out to dinner with a friend. Pt states he would like to transition to an attending psychiatrist after Dr Mueller if possible to have a longer-term relationship and to manage more complex medical conditions that have compounded his mental health symptoms.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: mood stable, less energy, helping parents, B-day, request for attending psychiatrist
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr as necessary

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: "I would like to be assigned an attending psychiatrist after my resident Dr leaves in June"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports concern that his psychiatric and medical conditions over past years have become much more complicated due to liver, thyroid weight gain,persistent depression and would like to request to be assigned an attending physician in the Adult Psychiatric clinic. Pt reports meeting with Dr Mueller for the last time last week and started a Seroquel taper (400-300 mg/day) for next 30 days and then 200 mg/day after that. Pt states he continue to experience depressive symptoms (anhedonia, low energy, feelings of hopelessness) but not SI.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content:depressive sxs, request for attending assignment
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr ? as necessary

[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	

This visit was performed as a Video Visit.

The patient was physically located at Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 05/02/2024 7:04 AM EDT

E&M Follow Up Note

Identifying Information:

Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint: "I'm sleeping a lot"

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. William was last seen by me on 3/1/24 and has had no psychiatric hospitalizations or ED visits in the interim.

- Reports doing well, stating, "things have been pretty good." Describes his mood as "pretty good." Denies SI and HI. Describes his anxiety as less overwhelming.
- Has been sleeping well, but continues to sleep a lot and still feels tired throughout the day. Notes fatigue has been chronic for him and did have a sleep study as a teenager. He does not recall any diagnosis arising from the study.
- Reports recently seeing his PCP, who diagnosed him with hypothyroid. States his PCP is aware he's on lithium and suspects the hypothyroidism predates starting the medication. Has now been taking levothyroxine for 2 weeks. Had a liver biopsy, which showed ongoing steatohepatitis. Expresses relief about getting answers regarding his health, but some overwhelm in response to multiple health issues.
- Notes weight gain of 25 pounds over the past 3 months, which he attributes to Seroquel. Glad to be feeling better overall, but states he's not feeling good about himself in light of the weight gain. Reports no appetite in the morning or afternoon, so has only been eating between 7PM and as late as midnight.
- Endorses ongoing, but decreasing, substance use: vaping cannabis 1-2 times per week, vaping nicotine 2-3 times per week, and rarely having 1-2 drinks (beer) if out with friends.

Psychiatric Review Of Systems:
Sleep changes: denies, continues to sleep 14-16 hours per night
Appetite changes: endorses, only hungry in the evening, has gained 25 pounds
Energy changes: endorses, very low
Overwhelming Anxiety: denies
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

Review of Systems
Psychiatric: Positive for sleep problem and anxiety.
Constitutional: Positive for weight gain and fatigue.
Eyes: Positive for corrected.
Respiratory: Negative.
Gastrointestinal: Other:chronic diarrhea
Musculoskeletal: Positive for arthralgias.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on:
Fluoxetine
Adderall
Abilify
Lamotrigine
Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."):
Gabapentin
Escitalopram
Risperidone
Latuda (shortness of breath, myalgias)
-Patient reported:

Citalopram (sexual side effects)
Bupropion
Methylphenidate
Amitriptyline

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: yes, uses vape 2-3 times per week
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 1-2 times per week
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childho
od history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues: Unemployed

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents. On SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	clonazePAM (KLONOPIN)	0.5 mg, Oral, Nightly PRN
•	gabapentin (NEURONTIN)	300 mg, Oral, Nightly
•	lithium	900 mg, Oral, Daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	QUEtiapine (SEROQUEL)	400 mg, Oral, Nightly
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: No, is taking PRN clonazepam every night rather than PRN
Medication response: Good
Side effects: weight gain, ? sedation
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HHS)
•	Bipolar 1 disorder (CMS/HHS)
•	Lyme arthritis (CMS-HCC) (CMS/HHS)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "pretty good"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: good

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.

Laboratory:
TSH (3/18/24): 8.040
T4 (3/18/24): 1.13
Lithium level (3/18/24): 0.7

UDS:
2/2/24: positive for amphetamine, THC

Data Reviewed:
Chart reviewed.

	Relevant Medications
	QUEtiapine (SEROquel) 100 MG Tab

[table#6]:
Other Visit Diagnoses

[table#7]:
	Anxiety

[table#8]:

William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.
9/5/23: Ongoing depression, starting escitalopram.
10/4/23: Ongoing depression, despite starting escitalopram 3 weeks prior. Difficulty falling asleep, even taking clonazepam nightly.
11/1/23: Ongoing depression, difficulty falling asleep, then sleeping more than 12 hours, and anxiety. Increased impulsivity, with return to gambling. Given minimal effect and concern for activation, decreased escitalopram. Also decreasing clonazepam.
11/20/23: Worsening anxiety since decreasing clonazepam. Low mood and difficulty falling asleep, then sleeping excessively. Plan to start quetiapine, taper off of escitalopram. Elevated LFTs noted, plan to recheck in several weeks.
1/5/24: Reports improved sleep and anxiety since starting quetiapine. Discontinuing Depakote due to LFTs.
2/2/24: Ongoing low mood and motivation. Able to fall asleep, but difficulty getting out of bed. Patient feels this is due to lack of structure to his days rather than morning drowsiness. Discussed sleep hygiene and adding structure. Elected to taper gabapentin due to lack of perceived benefit. Requesting an antidepressant.
3/1/24: Ongoing low mood, low motivation, and excessive sleep. Started on lithium. Anxiety has increased, which he attributes to tapering gabapentin.

Today he reports improved mood and anxiety. He denies side effects from lithium and recently started levothyroxine after being diagnosed with hypothyroidism by his PCP. He continues to sleep excessively and has gained 25 pounds over the past 3 months. Now that his lithium level is therapeutic, it is appropriate to begin reducing quetiapine. Will go slowly and monitor for return of insomnia. Ultimately, he may be appropriate for lithium monotherapy.

#Bipolar Disorder with history of psychotic features
- Continue lithium 900 mg nightly
- Monitor TSH every 6 months
- Discontinued Depakote due to elevated LFTs.
- Decrease quetiapine to 300 mg nightly x30 days, then 200 mg nightly if tolerated
- Discontinued escitalopram
- Discontinued haloperidol
- Discontinued l-methylfolate 15mg daily for antidepressant augmentation due to lack of perceived benefit and cost
-
Noted www.methylpro.com and www.deplin.com as resources to purchase this should be want to restart this in the future.
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety for now

#ADHD
- Patient currently on Adderall 20 mg BID through his PCP at Intermed
- I advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse. Also increased risk of depressive episodes.
- Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting decreased cannabis use 1-2 times per week.
- Patient has been trialing decreasing marijuana use. Will encourage his continued taper of this substance.

- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
- Levothyroxine per PCP
- Discontinued gabapentin
- Coordinate with patient's PCP's office as appropriate

#TX plan
There was not adequate time to update his treatment plan due to other clinical concerns. Will complete at next visit.

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 235 lbs BMI 31.00 (3/29/24)
- Vts 116/101 HR 79 (3/29/24)
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (2/2024).
** **
ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
** **
Follow up in 3 months with new psychiatry resident, or sooner if needed.

Grace Mueller, MD
04/24/24

A total of 30 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

Electronically signed by Grace Mueller, MD at 04/24/2024 3:28 PM EDT

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 04/11/2024 3:28 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "My PCP found a positive lab result for low thyroid and started me on synthroid"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that since he had seen me last he had a liver biopsy which re-confirmed "Fatty Liver Syndrome" but with not much change since last biopsy 10 years ago. Pt however was diagnosed by PCP with hypothyroidism and place on Synthroid medication. Pt and writer discuss overlap of some of his bipolar symptoms and symptoms of hypothyroidism . Pt hopeful that with correct diagnosis and treatment he will feel better.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: mildly depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: medical concerns,
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller as necessary
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HHS) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 04/17/2024 10:57 PM EDT

GENERAL: Well developed, well nourished adult in no apparent distress.
RESP: Breathing is non-labored.
GI: Abdomen is soft, non-distended
EXT: Warm, dry, and adequately perfused.
NEURO: Alert & oriented x 3, attends to voice and follows commands. Speech intact.
PSYCH: Interactive, Attentive. Organized thinking.

[table#14]:
Assessment / Plan
Liver bx with moderate sedation. The technical aspects and the risks, including bleeding, infection and damage to surrounding structures, were discussed in detail with the patient and/or family. They showed an understanding of these risks and wished to proceed. Written and informed consent was obtained.

PRE-SEDATION MEDICAL ASSESSMENT (Adult)

HISTORY
**H&P Reviewed **Yes
Obstructive sleep apnea and/or morbid obesity? (Increased risk of airway obstruction when sedated) :No
Increased risk of pulmonary aspiration because of: N/A

PHYSICAL ASSESSMENT / AIRWAY
**Mask ventilation, expected to be easy? **Yes
**Airway/Mallampati **(Higher Mallampati scores associated with sleep apnea and difficult intubation) Class I or II (able to see uvula, soft palate, tonsillar fauces)

RISK ASSESSMENT / PLAN
**ASA Physical Status Classification? **ASA I or II Healthy patient, or has mild systemic disease that does not limit activity.

**Is case Emergent? **No
Increased risk due to : N/A
**Moderate sedation planned? **Yes (Patient will respond at all times to voice or light touch)

**Consent for sedation obtained? **Yes

Narrative

EXAM: US GUIDED LIVER BIOPSY

Procedural Personnel
Attending(s): Dan Kloda, DO
Fellow(s): None
Resident(s): None
Advanced practice provider(s): None

Preprocedure diagnosis: Elevated LFTs
Post-procedure diagnosis: Same

INDICATION: increasing LFTs

Complications: None

IMPRESSION: Successful ultrasound-guided random liver biopsy.

Plan: Specimens were submitted to pathology for analysis in formalin.

PROCEDURE SUMMARY:
1. Biopsy of liver, needle; percutaneous
2. Ultrasonic guidance for needle placement, imaging supervision and interpretation

PROCEDURE DETAILS:

Pre-procedure

COMPARISON: None

Informed consent for the procedure was obtained and time-out was performed prior to the procedure.
Preparation (MIPS): The site was prepared and draped using all elements of maximal sterile barrier technique including sterile gloves, sterile gown, cap, mask, large sterile sheet, sterile ultrasound probe cover, hand hygiene and cutaneous antisepsis
with povidone-iodine.
Medical reason for site preparation exception (MIPS): Not applicable

Anesthesia/Sedation
Level of anesthesia/sedation: No sedation
Anesthesia/sedation administered by: Not applicable
Total intra-service sedation time: 30 minutes.

Access
Local anesthesia was administered. The liver was sonographically evaluated and judged appropriate for access. Real time ultrasound was used to visualize needle entry into the liver and a permanent image was stored.
Access side: Right
Access ultrasound findings: No focal hepatic mass.
Access technique: 20-gauge coaxial biopsy needle

TECHNIQUE:
The patient was positioned supine. The skin of the abdomen overlying the liver was prepped and draped in the usual sterile fashion. After local anesthesia with 8 mL 2% lidocaine without epinephrine and using real-time ultrasound guidance, the needle
was advanced percutaneously into the liver. The specimen(s) were obtained.

Closure
The needle was removed and hemostasis was achieved with manual compression. Sterile dressing(s) applied.

FINDINGS:
Additional description of procedure: None
Additional findings: None
Equipment details: None
Specimens removed: 3 20 gauge core needle biopsy specimens were obtained.
Estimated blood loss: Less than 10 mL

Attestation
I, Dan Kloda, DO, attest that I was present for the entire procedure. I reviewed the stored images and agree with the report as written.

WORKSTATION: WS3

Narrative

SERVICES PROVIDED BY NORDX LABORATORY - 04/04/2024 12:57 PM EDT
CASE: SS-24-08109
PATIENT: WILLIAM SERETTA
SPECIMEN: A. 20G CORE LIVER BX Client: RADO

FINAL DIAGNOSIS:
A. Liver, core biopsy:
-Steatohepatitis with no significant fibrosis (stage 0 of 4). See comment.

Comment: The biopsy is adequate and shows a mild and patchy steatohepatitis. Bile ducts appear intact. Etiologic considerations include alcohol, and the various causes of non-alcoholic fatty liver disease (NAFLD). An iron stain is negative. No prominent intracytoplasmic globules on PAS/PAS-D stains. Trichrome and reticulin stains show the pattern of fibrosis. Quantitative copper studies can be ordered on block (A1) if clinically indicated.

Histochemical stains
Trichrome 1A as above
Reticulin 1A as above
Iron 1A as above
PAS 1A as above
PAS-D 1A as above

Sign-out Pathologist:
Hagen Blaszyk, MD

E&M Follow Up Note

Identifying Information:

Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint: "I'm feeling more and more depressed"

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. William was last seen by me on 2/2/24 and has had no psychiatric hospitalizations or ED visits in the interim.

- States, "I'm feeling more and more depressed as time goes on." Feels numb and wakes up feeling terrible. Notes, "every day is a new low" over the past 2 years. Denies SI and HI.
- Reports quetiapine has helped him sleep, but he "gets lost" in his dreams and doesn't want to wake up. Takes his nightly medications at 9PM, falls asleep around midnight, and gets up in the mid-afternoon.
- Leaves the house 1-2 times per week, but otherwise lies in bed reading. Notes he has joint pain in his ankles and knees that flares up when he's less active or feeling more stressed. Taking Simponi. Recently got a gym membership through his insurance, but reports no motivation to go.
- Takes 1-2 doses of Adderall on days when he has something going on. States he usually takes it about 5 days per week.
- Describes his anxiety as "not great," which he attributes to decreasing gabapentin. Down to 300 mg nightly.
- Saw Portland Gastro and is getting weekly labs. Notes his LFTs are trending down.
- Endorses ongoing, but decreasing, substance use: vaping cannabis 1-2 times per week, vaping nicotine a few times per week, and rarely having 1-2 drinks if out with friends.

Psychiatric Review Of Systems:
Sleep changes: endorses, sleeping more, 14-16 hours per night
Appetite changes: endorses, eating more, has gained 20 pounds since starting quetiapine
Energy changes: endorses, very low
Overwhelming Anxiety: denies
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

Review of Systems
Psychiatric: Positive for depression, sleep problem and anxiety.
Constitutional: Positive for weight gain and fatigue.
Respiratory: Negative.
Gastrointestinal: Other:chronic diarrhea
Musculoskeletal: Positive for arthralgias.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
-When discharged from Dr. Abernathy's practice, William was on:
Fluoxetine
Adderall
Abilify
Lamotrigine
Clonazepam
-Prior medication trials with Dr. Abernathy, per her notes ("These medications either produced side effects or were not effective."):
Gabapentin
Escitalopram
Risperidone
Latuda (shortness of breath, myalgias)
-Patient reported:
Citalopram (sexual side effects)
Bupropion

Methylphenidate
Amitriptyline

ECT: 29 treatments in 2020

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: yes, uses vape several times per week
Caffeine: no
Alcohol: yes, rarely drinks 1-2 beers
Cannabis: yes, 1-2 times per week
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx (increased dose without medical direction).
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supporti ve. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues: Unemployed

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports: Parents, friend Aaron

Current: Living with his parents. On SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol	5,000 Units, Oral, Nightly
•	clonazePAM (KLONOPIN)	0.5 mg, Oral, Nightly PRN
•	gabapentin (NEURONTIN)	900 mg, Oral, Nightly
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	QUEtiapine (SEROQUEL)	400 mg, Oral, Nightly
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: No, is taking PRN clonazepam every night rather than PRN

Medication response: Minimal
Side effects: ? sedation
Prescription Monitoring Program checked today: no

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)
•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "depressed"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is moderate.

Laboratory:
AST 370, ALT 532 (1/3/24)
AST 431, ALT 628 (1/12/24)

UDS:
2/2/23: positive for amphetamine, THC

Data Reviewed:
Chart reviewed - pertinent for past diagnosis of chronic Lyme treated with Simponi and Outside records reviewed Records from Dr. Abernathy notable for diagnoses of bipolar II disorder, unspecified anxiety disorder, ADHD, and stimulant use disorder. She writes that the events leading to hospitalization at SHH (mania and psychosis) "probably changed" his mood disorder diagnosis to "Bipolar Type I, with history of psychotic features." She notes that William, to her knowledge, had never previously demonstrated psychotic symptoms prior to
this episode and acknowledges increased substance use leading up to it.

Assessment and Plan:

	TSH REFLEX THYROXINE FREE

[table#8]:

William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.
9/5/23: Ongoing depression, starting escitalopram.
10/4/23: Ongoing depression, despite starting escitalopram 3 weeks prior. Difficulty falling asleep, even taking clonazepam nightly.
11/1/23: Ongoing depression, difficulty falling asleep, then sleeping more than 12 hours, and anxiety. Increased impulsivity, with return to gambling. Given minimal effect and concern for activation, decreased escitalopram. Also decreasing clonazepam.
11/20/23: Worsening anxiety since decreasing clonazepam. Low mood and difficulty falling asleep, then sleeping excessively. Plan to start quetiapine, taper off of escitalopram. Elevated LFTs noted, plan to recheck in several weeks.
1/5/24: Reports improved sleep and anxiety since starting quetiapine. Discontinuing Depakote due to LFTs.
2/2/24: Ongoing low mood and motivation. Able to fall asleep, but difficulty getting out of bed. Patient feels this is due to lack of structure to his days rather than morning drowsiness. Discussed sleep hygiene and adding structure. Elected to taper gabapentin due to lack of perceived benefit. Requesting an antidepressant.

Today, William reports ongoing low mood, low motivation, and excessive sleep. He continues to spend much of his waking hours lying in bed, though he acknowledges that inactivity causes his joint pain to worsen. His anxiety has increased, which he attributes to tapering gabapentin. Dr. Abernathy's records were useful in clarifying her diagnostic impressions and his past medication history. After reviewing risks and benefits of startin
g lithium to target mood, William verbally consents. He is being followed by Portland Gastro for transaminitis and is getting labs drawn weekly, so will be able to have lithium monitoring labs drawn as well.

#Bipolar Disorder with psychotic features
- Start lithium 600 mg nightly x3 days, then increase to 900 mg nightly
- Baseline CMP, CBC, and TSH ordered
- Lithium level after 7 days on 900 mg; should present ~12 hours after evening dose
- Discontinued Depakote due to elevated LFTs.
- Continue quetiapine 400 mg nightly; will discuss decreasing in the future
- Discontinued escitalopram
- Discontinued haloperidol
- Discontinued l-methylfolate 15mg daily for antidepressant augmentation due to lack of perceived benefit and cost
- Noted www.methylpro.com and www.deplin.com as resources to purchase this should be want to restart this in the future.
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety for now

#ADHD
- Patient currently on Adderall 20 mg BID through his PCP at Intermed
- I advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse. Also increased risk of depressive episodes.
- Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting decreased cannabis use 1-2 times per week.
- Patient has been trialing decreasing marijuana use. Will encourage his continued taper of this substance.
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
- Continue gabapentin taper as tolerated; can continue medication if desired
- Coordinate with patient's PCP's office as appropriate

#TX plan
Updated 1/5/24

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 234 lbs (2/2/24)
- Vts 121/84 HR 66
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (2/2024).
** **
ROI signed for patient's former psychiatrist, Dr. Abernathy.
ROI signed for patient's PCP, Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
** **
Follow up in 1 month, or sooner as needed

Grace Mueller, MD
03/01/24

A total of 30 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "Nothing changes, I continue depressed"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports continuing depressive symptoms (anhedonia, excessive sleep, no motivation, thoughts of hopelessness) Pt states that he would welcome a positive change in his medication regime which could help with his persistent depression. Pt reports that his recent labs through PCP showed decreasing Live enzymes which pt found reassuring.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Depressive sxs, increased liver functioning, hopeful regarding a possible medication change tpassit with depression
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Attempting to cope with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller as necessary

[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **

Pt reports continuing depressive symptoms, poor appetite, over sleeping, low motivation, anhedonia. Pt aware that he has upcoming appointment with Dr Mueller and would like to trial another anti-depressant.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: depressive sxs, weight gain, abnormal labs,
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) pt attempting to cope with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Mueller
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 02/28/2024 3:12 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE:30 minutes
** **

CLIENT REPORT/CONCERN: " I met with Dr Mueller last week"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt continues to report significant
symptoms of depression,requested possible trial of anti-depressant medication when seeing Dr Mueller and was disappointed that she wanted to wait and monitor symptoms before making medication changes. Pt reports that he has an appointment with Portland Gastro to follow-up with high liver enzyme labs and will also meet with PCP for annual check-up.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: acute depressive symptoms, medical appointments
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) AttemptingCoping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint: "I feel stuck"

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. William was last seen by me on 1/5/24 and has had no psychiatric hospitalizations or ED visits in the interim.

- Reports his mood has been "pretty down, depressed." Requests Wellbutrin, which he states was recommended by his therapist. Notes he disagrees with his bipolar diagnosis, as he's had 1 lifetime manic episode, while under the influence of substances.
- States he feels "stuck," noting low motivation. Sleep has improved on quetiapine and he is able to fall asleep, but he reports difficulty getting out of bed unless he has plans. Notes waking up at 9:30AM today, but hitting snooze all morning before getting up at 1PM to get ready for this appointment at 2PM. Denies drowsiness on quetiapine. States his dreams are more appealing than being awake. Not working or volunteering. Spending most of his time in bed reading or currency trading on his phone.
- Notes anxiety has been "okay." Continues to take clonazepam nightly. Has not noticed a difference since decreasing gabapentin 5 days ago. Would like to taper off.
- Reports being scheduled to follow up with GI regarding transaminitis in a little over a week.
- Denies SI and HI.

Psychiatric Review Of Systems:
Sleep changes: endorses, better able to fall asleep on quetiapine, but continues to have difficulty getting up in the morning
Appetite changes: denies
Energy changes: endorses, low
Overwhelming Anxiety: denies
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

Review of Systems
Psychiatric: Positive for depression.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Other:chronic diarrhea
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine, amitriptyline, and Wellbutrin with Dr. Abernathy
Clonazepam
Gabapentin
Risperidone
Escitalopram
Citalopram - sexual side effects
Methylphenidate
Lurasidone - shortness of breath, myalgias
Numerous others per chart review
ECT

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: yes, uses vape daily
Caffeine: no
Alcohol: occasionally drinks 1-3 beers
Cannabis: yes, daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current

use
Prescription drugs: per past psychiatrist misused Adderall Rx.
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is current
ly unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues: Unemployed

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents. On SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	clonazePAM (KLONOPIN)	0.5 mg, Oral, Nightly PRN
•	gabapentin (NEURONTIN)	900 mg, Oral, Nightly
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	QUEtiapine (SEROQUEL)	400 mg, Oral, Nightly
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: No, is taking PRN clonazepam every night rather than PRN
Medication response: Good
Side effects: Denies
Prescription Monitoring Program checked today: no

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)
•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:

Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "depressed"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

[table#4]:
Vitals:

	Bipolar 1 disorder (CMS/HCC) - Primary

William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.

Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.
9/5/23: Ongoing depression, starting escita
lopram.
10/4/23: Ongoing depression, despite starting escitalopram 3 weeks prior. Difficulty falling asleep, even taking clonazepam nightly.
11/1/23: Ongoing depression, difficulty falling asleep, then sleeping more than 12 hours, and anxiety. Increased impulsivity, with return to gambling. Given minimal effect and concern for activation, decreased escitalopram. Also decreasing clonazepam.
11/20/23: Worsening anxiety since decreasing clonazepam. Low mood and difficulty falling asleep, then sleeping excessively. Plan to start quetiapine, taper off of escitalopram. Elevated LFTs noted, plan to recheck in several weeks.
1/5/23: Reports improved sleep and anxiety since starting quetiapine. Discontinuing Depakote due to LFTs.

Today he reports low mood and motivation. Quetiapine has been helpful with falling asleep, but he has been having trouble getting out of bed in the morning. He feels this is due to lack of structure to his days rather than morning drowsiness. We discuss sleep hygiene, specifically the importance of not lying in bed all day. We also discuss building structure into his days through employment, volunteering, and making plans. He discontinued Depakote due to transaminitis and elected to decrease gabapentin due to lack of perceived benefit. He would like to taper off of gabapentin entirely and we discuss a plan for doing so. He will follow up with GI soon regarding elevated LFTs. He would like to restart antidepressants, which we will discuss at his next appointment. In the meantime, I will attempt to get past records regarding diagnosis and medication trials from Dr. Abernathy, his psychiatrist prior to transfer to McGeachey Hall.

#Bipolar Disorder with psychotic features
- Discontinued Depakote
- Continue quetiapine 400 mg nightly
- Discontinued escitalopram
- Discontinued haloperidol
- Discontinued l-methylfolate 15mg daily for antidepressant augmentation due to lack of perceived benefit and cost
- Noted www.methylpro.com and www.deplin.com as resources to purchase this should be want to restart this in the future.
- Continue individual therapy with Charles Morris, LCSW

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety for now

#ADHD
- Patient currently on Adderall 20 mg BID through his PCP at Intermed
- I advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse. Also increased risk of depressive episodes.
- Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Is in pre-contemplative stage of change.
- Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
- Continue gabapentin 900 mg HS for 2 more nights, then decrease to 600 mg x7 nights, then decrease to 300 mg x7 nights, then stop
- Coordinate with patient's PCP's office as appropriate

#TX plan
Updated 1/5/24

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022) Wt 234 lbs (2/2/24)
- Vts 121/84 HR 66
- Benzodiazepine monitoring: UDS positive for amphetamine and THC (2/2024).

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: " I'm still feeling miserable emotionally and physically"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he visited PCP regarding Lab issues, received referral to Gastroenterology with appointment in 2 weeks and with see Dr Mueller tomorrow 2/2/24. Pt reports continued depressed mood, symptoms of anhedonia (no pleasure in activities that normally he looks forward too such as sports, gambiling), low energy, difficulty getting out and staying out of bed. Pt stated that he did get out of house twice in last week, once to get meds, once to visit childhood friend. Pt reports that these symptoms of depression have been persistent and

uninterrupted since leaving Spring harbor about 2 years ago and feels like medications changes since then have not helped much, reports interest in trialing an another anti-depressant. Pt attempted to identify medications that have not helped (Prozac, Abilify, Lomotrigine, Latuda) and tried to remember ones he thought he hasn't tried at least for some time (Cymbalta and Wellbutrin). Pt encouraged to discuss these thoughts with Dr Mueller at his appointment and writer stated he could attend appointment with pt if that would be helpful. Pt stated that he would appreciate that.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Depressive symptoms, medication concerns
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: No change

DESCRIBE: (as evidenced by) Attempting to cope with symptoms despite active stressors, taking medications as prescribed.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult with and attend patient meeting with Dr Mueller.
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 02/07/2024 2:48 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: " I spoke with Dr Mueller about my elevated liver enzymes"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports talking to Dr Mueller who had contacted pt's PCP and as a result has a referral to Portland Gastroenterology and tapering off Gabapentin. Pt states that he continues to experience depressed mood, anhedonia, low motivation, poor appetite. Pt reports that he hasn't participated in any gambling behavior since before Christmas mostly because he doesn't care. Pt denies SI. Pt has appt with Dr Mueller on 2/2, plan is to present in-person and writer will accompany him.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Depressive sxs, consult wit Dr Mueller
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS:Minimal

DESCRIBE: (as evidenced by) Attempting to cope with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller.
This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "I would like to discuss anti-depressant medication as main topic with Dr Mueller during my next visit in 3 weeks"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he stopped his Depakote medication after discussion with Dr Mueller and his liver LFT labs, increased Seroquel from 300 to 400mg. Pt not sure if he detects any difference in anxiety and mood but does report better sleep. Pt reports that his credit card was recently hacked and he had to cancel and get a new one which was a headache. Pt and writer discuss tx goals of trying to schedule healthy routines and

pt mentions that with his new health care coverage he is looking to sign up with a nearby gym with his childhood friend, Gretchen, to become gym buddies.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: medication changes and concerns, Tx goals , attending gym with friend, depressed mood
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Mueller.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987

MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint: "I never felt anything from Depakote anyway"

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. William was last seen by me on 11/20/23 and has had no psychiatric hospitalizations or ED visits in the interim.

- Reports doing alright, though feeling sick with a cold.
- Regarding elevated LFTs, denies new GI symptoms or yellowing of his skin or eyes. Agreeable to discontinuing Depakote, noting he didn't feel this medication was beneficial. Discuss history of steatohepatitis per liver biopsy in 2015. States this is managed by his PCP.
- States quetiapine has been "pretty good," reporting he's better able to fall asleep and feels better rests. Titrated up to 300 mg. Anxiety has improved somewhat, but he's been especially worried about his LFTs. Continues to take clonazepam every night.
- Denies SI and HI.

Psychiatric Review Of Systems:
Sleep changes: endorses, improved on quetiapine
Appetite changes: denies
Energy changes: endorses, low
Overwhelming Anxiety: denies
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

Review of Systems
Psychiatric: Positive for anxiety.Negative for sleep problem.
Constitutional: Positive for fatigue.
Respiratory: Positive for cough.
Gastrointestinal: Other:chronic diarrhea
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine, amitriptyline, and Wellbutrin with Dr. Abernathy
Clonazepam
Gabapentin
Risperidone
Escitalopram
Citalopram - sexual side effects
Methylphenidate
Lurasidone - shortness of breath, myalgias
Numerous others per chart review
ECT

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: yes, uses vape daily
Caffeine: no
Alcohol: occasionally drinks 1-3 beers

Cannabis: yes, daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx.
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues: Unemployed

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: L
iving with his parents. On SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:

Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	clonazePAM (KLONOPIN)	0.5 mg, Oral, Nightly PRN
•	divalproex (Depakote ER) 500 MG Tablet SR 24 hr	Please take 4 tabs (2000mg) nightly
•	gabapentin (Neurontin) 400 MG Cap	Take 1 Capsule by mouth every morning (400mg) and 2 Capsules by mouth every evening (800mg). Total daily dose 1200mg/day
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	QUEtiapine (SEROQUEL)	300 mg, Oral, Nightly
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: No, is taking PRN clonazepam every night rather than PRN
Medication response: Good
Side effects: Denies
Prescription Monitoring Program checked today: no

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)

•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: no agitation or retardation
Mood: "alright"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:
Depakote Monitoring:

[table#9]:

William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime
hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.

Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.
9/5/23: Ongoing depression, starting escitalopram.
10/4/23: Ongoing depression, despite starting escitalopram 3 weeks prior. Difficulty falling asleep, even taking clonazepam nightly.
11/1/23: Ongoing depression, difficulty falling asleep, then sleeping more than 12 hours, and anxiety. Increased impulsivity, with return to gambling. Given minimal effect and concern for activation, decreased escitalopram. Also decreasing clonazepam.
11/20/23: Worsening anxiety since decreasing clonazepam. Low mood and difficulty falling asleep, then sleeping excessively. Plan to start quetiapine, taper off of escitalopram. Elevated LFTs noted, plan to recheck in several weeks.

Today he reports improved sleep and anxiety since starting quetiapine. He has been concerned about his elevated LFTs, noting a history of steatohepatitis. He is agreeable to discontinuing Depakote, stating he never felt it was helpful anyway.

#Bipolar Disorder with psychotic features
- Discontinue Depakote
- CMP, hepatitis panel, and HIV
test in 1 week
- Increase quetiapine to 400 mg nightly
- Valproate level therapeutic at 115.2 (9/5/23)
- Discontinued escitalopram
- Discontinued haloperidol
- Discontinued l-methylfolate 15mg daily for antidepressant augmentation due to lack of perceived benefit and cost
- Noted www.methylpro.com and www.deplin.com as resources to purchase this should be want to restart this in the future.
- Continue individual therapy with Charles Morris, LCSW
- Currently working with Ticket to Work to resume working

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety

#ADHD

- Patient currently on Adderall 20 mg BID through his PCP at Intermed
- I advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse. Also increased risk of depressive episodes.
- Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Is in pre-contemplative stage of change.
- Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
- Continue gabapentin 1200 mg at bedtime
- Coordinate with patient's PCP's office as appropriate

#TX plan
Updated 1/5/24

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022)
- Vts 121/84 HR 66
- Depakote monitoring: Last level 115.2 (9/2023). CBC nml (9/2023). CMP with AST 95, ALT 193 (11/2023). CMP with AST 370, ALT 532 (1/3/24)
- Benzodiazepine monitoring: UDS positive for clonazepam, amphetamine and THC (2/2023).
** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
** **
Follow up in 4 weeks, or sooner as needed

Grace Mueller, MD
01/05/24

A total of 30 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the providers were located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta), Niklas Hase, MSIII

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Grace Mueller, MD at 01/10/2024 5:07 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE:45 minutes
** **

CLIENT REPORT/CONCERN: "My blood labs from rheumatology are even more elevated for my Liver enzymes"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt concerned about trend of lab results indicating ever-increasing levels of Liver enzymes. Pt states that his mood is unchanged, meaning severely depressed, difficulty getting out of bed, no normally pleasurable activities to pursue, even gambling or stock monitoring. Pt also reports more anxiety about his health and his future, wonders about the utility of continuing on medications since his only hospitalization which have not been effective for almost 2 years. Pt plans to discuss medication concerns with Dr Mueller tomorrow.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: worries about health and future, medication concerns
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Coping with symptoms, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Mueller.
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes

** **

CLIENT REPORT/CONCERN: " I've been sick for almost a week, spending 20 hrs a day in bed"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt states that he has been physically ill for days but also more depressed. Pt reports concern about recent labs that show a trend of very high and abnormal liver enzymes. Pt curious about his current medication regime and will discuss with Dr Mueller when he sees her on 1/5. Pt encouraged by writer to put a note in MyChart asking RN or Dr Mueller for a call regarding his concerns with medications.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: physically ill, sxs of depression, concern regarding labs and medications
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller.
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 01/02/2024 11:53 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: I just visited my PCP and lab results for my liver functioning were: ALT=247, AST 176"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that lab results from seeing his PCP indicated very high liver functioning results and that his diet, exercise,sleep and general functioning has not changed since receiving similar results for labs ordered by Dr Mueller 6-8 weeks ago. Writer urged pt to call or MyChart PCP lab results to Dr Mueller for her reference and ask for return call regarding abnormal labs and her recommendations. Pt states that his increased does of Seroquel (now 300mg) has been useful for sleep and reduction in anxiety. Pt happy to find that his Wellcare part

C now includes dental and vision care.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: pt's worry about abnormal liver functioning labs, medications issues
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 11/30/2023 3:46 PM EST

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes

CLIENT REPORT/CONCERN: " My appointment with Dr Mueller went well"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he met recently with Dr Mueller to discuss increased level of anxiety since put on benzodiazapine taper several weeks ago. Pt reports that Dr Mueller started him on Seroquel which pt says has been helpful for reduced anxiety and better sleep. Pt states he has some increased energy, has reduced frequency and severity of gambling activities thus increasing his savings. Pt feels motivated around obtaining and analyzing sports data for limited betting which has been a strength while in finance business but recognizes potential harm of activity, intends to decrease further.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: medication changes, improvement in sleep , less anxiety
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint: "I'm anxious all the time"

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. Today's visit was precepted by Dr. Newell. William was last seen by me on 11/1/23 and has had no psychiatric hospitalizations or ED visits in the interim.

- Reports "doing alright," but notes increased anxiety with clonazepam dose reduction. Has anxiety all the time, but finds it most noticeable at night, stating he ruminates for hours. Is taking clonazepam nightly around 8PM.
- Continues to sleep at least 12 hours a night, but never feels rested. Spends most of his time in bed.
- Mood is "not great." Not getting out of the house a lot, has low energy. Notes no difference in symptoms after decreasing escitalopram to 10 mg.
- Unable to think of any period in which he felt well in the past several years. Has to go back over a decade to recall a time when he didn't feel "awful constantly." Notes symptoms first began gradually after an incident in Salt Lake City in fall 2011, where he was skiing ("A friend did something really stupid at my house and I had to deal with the legal consequences.").
- Notes trialing many medications over the past 8-10 years without results, except for clonazepam and Adderall. No difference on Depakote. Feels he was misdiagnosed with bipolar I disorder and that he actually has bipolar II or PTSD. States that what looked like a manic episode was actually him getting excited about his work getting really popular.
- Regarding elevated LFTs, denies any new GI symptoms. Has IBS with diarrhea, but symptoms have been at baseline. Alcohol use has been minimal, a beer here and there, with never more than 3 drinks in a day. Denies Tylenol use. Denies current or historic IV drug use.
- No safety issues reported at today's visit. Denies SI and HI.

Psychiatric Review Of Systems:
Sleep changes: endorses, difficulty falling asleep due to ruminating thoughts, then sleeping more than 12 hours

Appetite changes: denies, eating 1-2 times per day, which is typical for him
Energy changes: endorses, low
Overwhelming Anxiety: endorses
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

Review of Systems
Psychiatric: Positive for depression, sleep problem and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Other:diarrhea
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine, amitriptyline, and Wellbutrin with Dr. Abernathy
Clonazepam
Gabapentin
Risperidone
Escitalopram
Citalopram - sexual side effects
Methylphenidate
Lurasidone - shortness of breath, myalgias
Numerous others per chart review
ECT

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: yes, uses vape daily
Caffeine: no
Alcohol: occasionally drinks 1-3 beers
Cannabis: yes, daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx.
IVDU: no

No previou
s substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues: Unemployed

Military History: Denies

Legal Problems: Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	clonazePAM (KLONOPIN)	0.5 mg, Oral, Nightly PRN
•	divalproex (Depakote ER) 250 MG Tablet SR 24 hr	Please take 1 tabs (250mg) along with 4 tabs of 500mg for a total daily dose of 2250mg by mouth nightly
•	divalproex (Depakote ER) 500 MG Tablet SR 24 hr	Please take 4 tabs (2000mg) along with 1 tab of 250mg for a total daily dose of 2250mg by mouth nightly
•	escitalopram (LEXAPRO)	10 mg, Oral, Daily
•	gabapentin (Neurontin) 400 MG Cap	Take 1 Capsule by mouth every morning (400mg) and 2 Capsules by mouth every evening (800mg). Total daily dose 1200mg/day
•	haloperidol (Haldol) 5 MG Tab	Take one half tablet nightly for 14 days THEN stop. If psychotic symptoms recur, please resume previous dose and call doctor
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: No, is taking PRN clonazepam every night
Medication response: Partial
Side effects: Denies
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)
•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness
Mood: "not great"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact

Fund of knowledge: good
Insight: limited
Judgment: fair

There were no vitals filed
for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:
Depakote Monitoring:

[table#9]:

William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.

Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depress
ion. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.
9/5/23: Ongoing depression, starting escitalopram.
10/4/23: Ongoing depression, despite starting escitalopram 3 weeks prior. Difficulty falling asleep, even taking clonazepam nightly.
11/1/23: Ongoing depression, difficulty falling asleep, then sleeping more than 12 hours, and anxiety. Increased impulsivity, with return to gambling. Given minimal effect and concern for activation, decreased escitalopram.

Today, he reports worsening anxiety since decreasing clonazepam following his last visit. His low mood and difficulty falling asleep, then sleeping excessively, have continued. We discuss the risks and benefits of starting quetiapine at night for anxiety and mood stabilization, to which he verbally consents. He is also agreeable to tapering off escitalopram given lack of effect. Elevated LFTs may be secondary to Depakote use and we will decrease dose and recheck in several weeks.

#Bipolar Disorder with psychotic features
- Decrease Depakote to 2000 mg ER nightly
- Repeat CMP in 4 weeks
- Start quetiapine 50 mg nightly x 2 days, then increase to 100 mg nightly x 2 days, then increase to 200 mg nightly x 2 days, then increase to 300 mg nightly if tolerated
- Valproate level therapeutic at 115.2 (9/5/23)
- Decrease escitalopram to 5 mg daily for 7 days, then discontinue
- Discontinued haloperidol
- Discontinued l-methylfolate 15mg daily for antidepressant augmentation due to lack of perceived benefit and cost
- Noted www.methylpro.com and www.deplin.com as resources to purchase this should be want to restart this in the future.
- Continue individual therapy with Charles Morris, LCSW
- Currently working with Ticket to Work to resume working

#Anxiety
- Continue clonazepam 0.5 mg at bedtime PRN for anxiety

#ADHD
- Patient currently on Adderall 20 mg BID through his PCP at Intermed
- I advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse. Also increased risk of depressive episodes.
- Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.
- Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
- Continue gabapentin 1200 mg at bedtime
- Coordinated with the patient's PCP's office.

#TX plan

Up to date

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1 (6/2022)
- Vts 121/84 HR 66
- Depakote monitoring: Last level 115.2 (9/2023). CBC nml (9/2023). CMP with AST 95, ALT 193 (11/2023).
- Benzodiazepine monitoring: UDS positive for clonazepam, amphetamine and THC (2/2023).

Grace Mueller, MD
11/20/23

A total of 45 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the providers were located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta), Niklas Hase, MSIII

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Cosigned by Timothy Newell, DO at 11/22/2023 12:18 PM EST

Teaching Physician Attestation of Resident Supervision

E&M Supervision
I have seen and evaluated the patient and reviewed the patient's medical history, diagnosis, physical exam findings, assessment and plan with the resident, Grace Mueller, MD. I agree with the assessment and plan, with the following additional comments:
[x] I was physically present during the critical or key portions of the service furnished by the resident, Grace Mueller, MD.
[x] I performed the critical or key portions of the service myself.

I personally interviewed and examined the patient with the resident, reviewed the findings, discussed the plan, and read their Progress Note.

In addition to their findings, I note William is a pleasant 36 y/o male seen via telehealth. He reports persistent depression - he identifies much of his struggles beginning after an event in fall of 2011. We discuss prior hospitalization - including significant inhalant use - he is not using currently. He has had more anxiety with klonopin dose reduction - mostly at night with rumination. He has had a number of medication trials - he is not sure that current medicines are helpful. We review his bipolar diagnosis. I recommend avoidance of monoamine antidepressants due to evidence that they do not help with bipolar depression and may exacerbate rapid cycling and mixed states. We reviewed other bipolar depression options including Seroquel, Vrayalar, and lamictal.

I concur with the Impression and Plan.

Tim Newell, DO

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: " I haven't left my bed since last Friday"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports significant increase in anxiety , sleeping as much as he can to avoid anxiety. Pt states he also feels more depressed, feels that last discussion with Dr Mueller was too short and that he was generally in agreement to reduce benzo for anxiety bu thought there would be an effective alternative provided to manage anticipated increase in anxiety. Pt reports that he has cut down on gambling but has used house credits in sports betting without any net loss in order to distract himself and keep his mind functional. Pt reports he will see Dr Mueller on Monday.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: sad, tearful
Thought Form: logical and coherent
Thought Content: Increased anxiety and depressive symptoms, reduced gambling, medication concerns
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: poor

DESCRIBE: (as evidenced by) dysfuctional coping with symptoms and active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr.
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 11/19/2023 5:34 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE:45 minutes
** **

CLIENT REPORT/CONCERN: "I haven't started on the reduced anxiety medication yet"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports taking medications as previously prescribed, will be attempting to pick up and use newly prescribed dose of anxiety meds (cut in 1/2). Pt reports that he has been gambling with a sports app he has credits with but has limited his participation to his credits. Pt states he understands this is not good but has been a positive distraction in terms of researching sports data instead of lying in bed. Writer and pt discussed plan to incorporate coping exercises into each session Pt agreed.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: sxs of anxiety/depression, gambling behavior, medications
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller as necessary

[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at home .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 11/12/2023 10:01 PM EST

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: " I am rationing anxiety medication to manage stress daily"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports seeing Dr Mueller for the second time yesterday and disappointed that she decreased anxiety medication by half after hearing that he was struggling with prolonged symptoms of anxiety and depression. Pt worried about provider's concern for daily symptomology. Pt states that he has not gambled this week, feels confident that he can withstand cravings to gamble. Pt and writer discuss coping skills for anxiety. Pt seeks consult with PCP regarding anxiety medications.

Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: very anxious
Thought Form: logical and coherent
Thought Content: increased anxiety re medications, depressive sxs, dissapointment
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller as necessary

[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 11/05/2023 9:12 PM EST

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987

MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint: "I'm surviving, but not doing much else"

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. William was last seen by me on 10/4/23 and has had no psychiatric hospitalizations or ED visits in the interim.

- Reports doing "alright." Mood is "not great." Notes not having much to look forward to, "every day looks the same." States, "I'm surviving but not doing much else." Feels pretty tired and spends a lot of time in bed. Low energy, not leaving the house much, and tasks like going downstairs to make ramen feel overwhelming.
- Difficulty falling asleep due to rumination, lying awake in bed for hours. Falls asleep around 2AM, then sleeps until 4PM. Takes clonazepam and gabapentin around 7:30-9PM. Notes clonazepam slows his racing thoughts, but doesn't help him sleep. If he doesn't take clonazepam, reports his anxiety increases significantly.
- Anxiety has been "off and on." He has been sleeping to avoid feeling anxious, but denies his anxiety ever becomes overwhelming.
- Notes increased impulsivity over the past month, since starting Lexapro. He has been gambling online (betting on sports with Bitcoin) and oversharing in conversations. He has been working on gambling with Charles Morris, LCSW and reports it's been 2 weeks since he last gambled. He states he gambles in order to "feel something; otherwise I feel pretty numb."
- He takes Adderall (prescribed by PCP) at least 5 days a week. Has not noticed a difference on Lexapro and asks about retrying Wellbutrin, which he took 5-7 years ago but discontinued for unknown reasons.
- No safety issues reported at today's visit. Denies SI and HI.

Psychiatric Review Of Systems:
Sleep changes: endorses, difficulty falling asleep due to ruminating thoughts, then sleeping more than 12 hours
Appetite changes: denies, eating 1-2 times per day, which is typical for him
Energy changes: endorses, low
Overwhelming Anxiety: denies
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

Review of Systems
Psychiatric: Positive for depression, sleep problem and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine, amitriptyline, and Wellbutrin with Dr. Abernathy
Clonazepam
Gabapentin
Risperidone
Escitalopram
Citalopram - sexual side effects
Methylphenidate
Lurasidone - shortness of breath, myalgias
Numerous others per chart review
ECT

Family Psych History
Suicide -Denies
Major Mental Illness -Denies

Substance Abuse -Denies

Substance Use History:
Tobacco: yes, uses vape daily
Caffeine: no
Alcohol: no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis: yes, Daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx.
IVDU: no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and ol
der sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues: Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

•	escitalopram (LEXAPRO)	20 mg, Oral, Daily
•	gabapentin (Neurontin) 400 MG Cap	Take 1 Capsule by mouth every morning (400mg) and 2 Capsules by mouth every evening (800mg). Total daily dose 1200mg/day
•	haloperidol (Haldol) 5 MG Tab	Take one half tablet nightly for 14 days THEN stop. If psychotic symptoms recur, please resume previous dose and call doctor
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes

Medication response: Partial
Side effects: Denies
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)
•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness
Mood: "not great"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: intact

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient man
agement is high.

Laboratory:
Depakote Monitoring:

[table#7]:
	Bipolar affective disorder, remission status unspecified (CMS/HCC) - Primary
	Anxiety

[table#8]:
William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.

Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.
9/5/23: O
ngoing depression, starting escitalopram.
10/4/23: Ongoing depression, despite starting escitalopram 3 weeks prior. Difficulty falling asleep, even taking clonazepam nightly.

Today, he endorses ongoing depressive symptoms, with difficulty falling asleep, then sleeping more than 12 hours, and low energy. He has now been on escitalopram for more than 6 weeks and reports increased impulsivity (gambling) over the past month. Given minimal effect and concern for activation, will decrease escitalopram and consider tapering at next visit. He endorses anxiety, with rumination that is keeping him awake at night, despite taking clonazepam before going to bed. We discuss that benzodiazepines are not preferred agents for long-term treatment of anxiety and he agrees to start slowly tapering this.

#Bipolar Disorder with psychotic features
- Continue Depakote 2250 mg ER daily
- Valproate level therapeutic at 115.2 (9/5/23)
- Decrease escitalopram to 10 mg daily
- Discontinued haloperidol
- Discontinued l-methylfolate 15mg daily for antidepressant augmentation due to lack of perceived benefit and cost
- Noted www.methylpro.com and www.deplin.com as resources to purchase this should be want to restart this in the future.
- Continue individual therapy with Charles Morris, LCSW
- Currently working with Ticket to Work to resume working

#Anxiety
- Decrease clonazepam to 0.5 mg at bedtime PRN for anxiety

#ADHD
- Patient currently on Adderall 20mg BID through his PCP at Intermed
- I advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse. Also increased risk of depressive episodes.
- Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.
- Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
- Continue gabapentin 1200 mg at bedtime
- Coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

#TX plan
Updated 9/6/23

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1
- Vts 121/84 HR 66
- Depakote monitoring: Last level 115.2 (9/2023). CBC nml (9/2023). CMP pending.
- Benzodiazepine monitoring: UDS positive for clonazepam, amphetamine and THC (2/2023).
** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
** **
Follow up in 1 month, or sooner as needed

Grace Mueller, MD
11/1/23

A total of 30 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Grace Mueller, MD at 11/03/2023 12:47 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE:60 minutes
** **

CLIENT REPORT/CONCERN: "I'm more depressed, I only left the house twice in the last week."

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports states that his anxiety and symptoms of depression have increased last week. Pt reported that his mind doesn't stop racing, constantly feels like he is about to have a panic attack, feels like the last decade of his life has been in limbo,constantly thinking of the "woulda, coulda, shouda". Pt states he was able to not gamble this last week and that feels good because part of his grief/loss anxiety is his losing way too much money in past associated with gambling. "It's almost like having PTSD". Writer and pt discussed potential coping skills related to CBT/DBT ways to manage negative thoughts/feelings. Pt and writer agree that this should be focus of continued sessions.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: anxious
Thought Form: logical and coherent
Thought Content: depression/anxiety symptoms, grief/loss with gabling behavior and past
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller as necessary
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at home .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "I gambled again, but just twice"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Writer and pt discuss the meaning of his gambling behavior and the potential pros and cons. Pt stated that a big reason for his gambling behavior is to feel anything after years of chronic depression and numbness. Writer and pt discuss harm reduction versus abstinence and pt feels his only choice is to maintain abstinence because he still would like to pursue a career in financial management and gambling is not professional behavior. Pt looking forward to discussing medications with Dr Mueller in 2 weeks.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: pros/cons of gambling, desperation to feel
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller as necessary

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at home .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: " I relapsed to gambling again and that is a red flag"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that right after meeting with Dr Mueller the first time he started relapse to gambling (before taking new anti-depressant). Pt embarassed, ashamed, sad about behavior, had not gambled for more than a year and was a destructive behavior that he thought he had put behind him.Pt stated that seperately he is a little disappointed ant-depressant was not more effective which gives him a sense of hopelessness, despite his probably putting too much hope on one medication. Pt endorses symptoms of depression, denies

symptoms of hypomania, denies SI. Writer discussed relapse prevention principles that pt said he understood. Writer also involved pt in the topic of the meaning of his gambling behavior and the way it makes him feel. Will continue this meaning of behaviors next session.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: sad
Thought Form: logical and coherent
Thought Content: sadness related to relapsing to gambling, medication effectiveness
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: minimal

DESCRIBE: (as evidenced by) Attempting to cope with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult with Dr Mueller
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 10/16/2023 8:36 AM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes

** **

CLIENT REPORT/CONCERN: "I am very tired despite sleeping too much"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports depressive symptoms, difficulty with sleep hygiene and oversleeping. Patient reports not much change with current medication changes but has been able to problem-solve educational debt difficulties. Pt confirms being on waiting list for subsidized housing, has limited ability to move outside of bedroom due to Parents working from home. Pt hopeful that medications may still help.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Depressive symptoms, sleep hygiene issues,
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller as necessary

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987

MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint: "I've been alright"

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. William was last seen by me on 9/6/23 and has had no psychiatric hospitalizations or ED visits in the interim.

-Reports he's been "alright." Started Lexapro after his last appointment and felt very tired for the first couple of weeks. Also felt his anxiety "spiking." Fatigue and anxiety have been getting better. He did increase the dose and is now taking 20 mg daily. He has not noticed any impact on his mood, though states he has been extra stressed for the past month dealing with student loans.
-Difficulty falling asleep due to "difficulty shutting my brain down," despite taking PRN clonzepam 1 mg every night.. Lying in bed for hours looking at his phone before falling asleep around 1-2AM, then sleeping until noon or later. Reviewed sleep hygiene, including only using his bed for sleep and sex, getting up if he's not asleep within 20 minutes, and limiting screen time 1 hour before bed.
-Taking Depakote, Adderall (prescribed by PCP), and gabapentin as prescribed.
-No safety issues reported at today's visit. Denies SI, HI

Psychiatric Review Of Systems:
Sleep changes: endorses, difficulty falling asleep
Appetite changes: denies
Energy changes: denies, low, though improving
Overwhelming Anxiety: endorses
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

Review of Systems
Psychiatric: Positive for depression, sleep problem and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine, amitriptyline, and Wellbutrin with Dr. Abernathy
Clonazepam
Gabapentin
Risperidone
Escitalopram
Citalopram - sexual side effects
Methylphenidate
Lurasidone - shortness of breath, myalgias
Numerous others per chart review
ECT

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse -Denies

Substance Use History:
Tobacco: yes, uses vape daily

Caffeine: no
Alcohol: no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis: yes, Daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx.
IVDU: No

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state government
s." Reports having money in Bitcoin but lost this.

Financial Issues: Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)
•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness
Mood: "alright"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: good
Insight: fair
Judgment: intact

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is high.

	Bipolar affective disorder, remission status unspecified (CMS/HCC) - Primary

| | **Anxiety** |

[table#8]:
William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.

Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.
9/5/23: Ongoing depression, starting escitalopram.

Today, he endorses ongoing depressive symptoms. He started escitalopram about 3 weeks ago and we discuss that SSRIs can take 6-8 weeks to reach full effect. He also notes difficulty falling asleep, despite taking clonazepam nightly, and we discuss sleep hygiene.

#Bipolar Disorder with psychotic features
- Continue Depakote 2250 mg ER daily
- Valproate level therapeutic at 115.2 (9/5/23)
- Continue escitalopram 20 mg daily
- Discontinued halope
ridol
- Discontinued l-methylfolate 15mg daily for antidepressant augmentation
- Noted www.methylpro.com and www.deplin.com as resources to purchase this should be want to restart this in the future.
- Continue individual therapy with Charles Morris, LCSW
- Currently working with Ticket to Work to resume working

#Anxiety
- Continue clonazepam 1 mg at bedtime PRN for anxiety for now - will revisit this at next appointment
- #28 with 2 RF sent on 5/10/23

#ADHD
- Patient currently on Adderall 20mg BID through his PCP at Intermed
- I advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse. Also increased risk of depressive episodes.
- Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.

- Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
- Continue individual therapy with Charles Morris, LCSW

#Healthcare maintenance
#Peripheral neuropathy
- Continue gabapentin 1200mg at bedtime
- Coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

#TX plan
Updated 9/6/23

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1
- Vts 121/84 HR 66
- Depakote monitoring: Last level 115.2 (9/2023). CBC nml (9/2023). CMP pending.
- Benzodiazepine monitoring: UDS positive for clonazepam, amphetamine and THC (2/2023).
** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
** **
Follow up in 1 month, or sooner as needed

Grace Mueller, MD
10/4/23

A total of 30 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Grace Mueller, MD at 10/05/2023 3:23 PM EDT

Progress Notes - documented in this encounter

Charles, LCSW - 09/21/2023 3:36 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: "I am extremely tired, have had a headache las t3-4 days"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports continuing symptoms of depression (low energy, anhedonia, excessive sleep) but has been working on a task (student loans) most days, attempting to take action on source of his anxiety, his finances. Pt discusses how this and other tasks such as repairing his car have been too overwhelming in past but now he is able to focus a little more.Pt taking increased dose of anti depressant for last 2 weeks, will see Dr Quale in early October to discuss progress or lack thereof.

Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: depressive symptoms, task-oriented achievment
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Quayle

[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 09/25/2023 8:28 AM EDT

Plan of Treatment - documented as of this encounter

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 09/14/2023 3:53 PM EDT

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: " I finally started on a new medication"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports starting new anti-depressant medication, saw Dr Mueller 2 weeks ago and started on 10 mg Lexapro and now on 20 mg Lexapro. Pt states that he has a little more energy and is more motivated, looking into re-financing his student debt. Pt reports ceasing cannabis use about 30 days ago .
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: Mildly anxious
Thought Form: logical and coherent
Thought Content: Medication changes, brighter mood, more energy
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Dr Mueller as necessary.
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 09/18/2023 7:20 AM EDT

E&M Follow Up Note

Identifying Information:

Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint: "I'm in a holding pattern"

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. William was last seen by me on 8/4/23 and has had no psychiatric hospitalizations or ED visits in the interim.

-Reports feeling "alright." Not a lot has changed since our last appointment, states he feels like he's in a "holding pattern." Ongoing depression, with low energy. Staying in the house a lot.
-Requests an antidepressant like Lexapro, which he remembers being on for many years. Reports he felt better than he does now. Denies sexual side effects (which, per EMR, he experienced on citalopram).
-Taking Depakote, Adderall (prescribed by PCP), and gabapentin as prescribed. Taking PRN clonzepam 1 mg every night. Was taking L-methtylfolate OTC as recommended by Dr. Genovese, but stopped due to high cost ($50/month) and lack of discernible effect. Denies side effects from any of his medications.
-No safety issues reported at today's visit. Denies SI, HI

Psychiatric Review Of Systems:
Sleep changes: endorses
Appetite changes: denies
Energy changes: endorses, consistently low
Overwhelming Anxiety: endorses
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

Review of Systems
Psychiatric: Positive for depression and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin
Risperidone
Escitalopram
Citalopram - sexual side effects
Methylphenidate
Lurasidone - shortness of breath, myalgias
Numerous others per chart review
ECT

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse - Denies

Substance Use History:

Tobacco: yes, uses vape daily
Caffeine: no
Alcohol: no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis: yes, Daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine: no
Opiates: no
Other street drugs: history of using heavy amounts of "whippets" prior to hospitalization. Reported using 200/week. Denies current use
Prescription drugs: per past psychiatrist misused Adderall Rx.
IVDU: No

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Previously reported having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues: Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal issues
.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Drug or Other Allergies:
[table#1]:
Allergies
Allergen	Reactions
•	Latuda [Lurasidone]	Shortness of Breath and Myalgia
•	Citalopram	Other (See Comments)
		Sexual side effects
•	Concerta [Methylphenidate]	Other (See Comments)
•	Humira [Adalimumab]	Headache

Current Medications:
[table#2]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	clonazePAM (KLONOPIN)	1 mg, Oral, Nightly PRN
•	divalproex (Depakote ER) 250 MG Tablet SR 24 hr	Please take 1 tabs (250mg) along with 4 tabs of 500mg for a total daily dose of 2250mg by mouth nightly
•	divalproex (Depakote ER) 500 MG Tablet SR 24 hr	Please take 4 tabs (2000mg) along with 1 tab of 250mg for a total daily dose of 2250mg by mouth nightly
•	gabapentin (Neurontin) 400 MG Cap	Take 1 Capsule by mouth every morning (400mg) and 2 Capsules by mouth every evening (800mg). Total daily dose 1200mg/day
•	haloperidol (Haldol) 5 MG Tab	Take one half tablet nightly for 14 days THEN stop. If psychotic symptoms recur, please resume previous dose and call doctor
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: Partial
Side effects: Denies
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#3]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)
•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:
Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness
Mood: "alright"
Affect: appropriately reactive to conversational content
Thought process: linear
Associations: logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration: conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: fair
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment:
The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:
Depakote/Carbamezapine Monitoring:
[table#4]:
Lab Results
Component	Value	Date
	VALPROATE	108.0 (H)	10/25/2022
	WBC	6.3	10/25/2022
	PLAT	209	10/25/2022
	CHOL	170	03/12/2022
	TRIG	303 (A)	03/12/2022
	HDL	39 (A)	03/12/2022
	LDLCALC	70	03/12/2022

UDS:
2/15/23: positive for amphetamine, THC

Data Reviewed:
Chart reviewed prior to today's meeting

Assessment and Plan:
[table#5]:
Problem List Items Addressed This Visit
None
William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears eut
hymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder.

Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.

Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.
8/4/23: Ongoing depression, requesting an SSRI.

Today, he endorses ongoing depressive symptoms and again requests an SSRI. As he is stable on a mood stabilizer, reasonable to trial an SSRI, with close monitoring for the emergence of mania.

#Bipolar Disorder with psychotic features
- Continue Depakote 2250mg ER daily
- Valproate level 115.2
- Start escitalopram 10 mg x 7 days, increase to 20 mg if tolerated
- Discontinued haloperidol
- Discontinued l-methylfolate 15mg daily for antidepressant augmentation
- Noted www.methylpro.com and www.deplin.com as resources to purchase this should be want to restart this in the future.
- Continue individual therapy with Charles Morris, LCSW
- Currently working with Ticket to Work to resume working

#Anxiety
- Continue clonazepam 1 mg at bedtime PRN for anxiety
- #28 with 2 RF sent on 5/10/23

#ADHD
- Patient currently on Adderall 20mg BID through his PCP at Intermed
- I have advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse.
- Per notes from past psychiatrist, patient had one ins
tance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.
- Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
- Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
- Continue gabapentin 400mg qam/800mg at bedtime
- Coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

#TX plan
Updated 9/6/23

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
- Ht 6'1" Wt 225lbs BMI 30.1
- Vts 121/84 HR 66
- Depakote monitoring: Last level 115.2 (9/2023). CBC nml (9/2023). CMP pending.
- Benzodiazepine monitoring: UDS positive for clonazepam, amphetamine and THC (2/2023).

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: I am still depressed, nothing has changed"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt continues poor functioning, minimal ADLs, anhedonia, thoughts of hopelessness but denies SI. Pt gets outside his house once a day with his dog and 1 x week to visit neighborhood friend, otherwise is isolated. Pt states he is still sleeping at odd hours but appetite is better, eats dinner with his parents once a day. Pt looking forward to meeting with Dr Mueller again so that he may start a new medication to help with his depression.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content:Depressive symptoms, denies SI
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors, engaged in treatment.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult as needed with Dr Mueller
[table#1]:
1.	**Bipolar 2 disorder (CMS-HCC) (CMS/HCC) **	

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Charles, LCSW at 08/25/2023 12:39 PM EDT

Plan of Treatment - documented as of this encounter

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint: "Things got blown out of proportion"

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, and polysubstance use disorder (stimulants, cannabis, and inhalants) who presents today for a follow-up appointment. His therapist, Charles Morris, LCSW, is present for today's visit as well. William was last seen by Dr. Genovese on 5/10/23 and has had no psychiatric hospitalizations or ED visits in the interim.

-Feeling "crushed and stuck." Feels like treatment has been in "neutral" for about a year.
-Regarding bipolar diagnosis, states "things got blown out of proportion." Acknowledges he's had "bipolar II issues," depression, and anxiety since his early 20s, but uncertain if bipolar I disorder diagnosis fits.
-Notes that prior to his March 2022 SHH hospitalization, he was using nitrous oxide heavily ("200 canisters per week and a little bit of cannabis"). States he was focused on making music, sometimes staying up for a day and a half at a time, and spending more money than usual. He acknowledges these are signs consistent with mania, but states it didn't feel out of the ordinary for him.
-No longer using nitrous oxide. Had vitamin B12 deficiency as a result of his use that has since resolved with B12 injections.
-Felt better on antidepressants, Lexapro in particular, with more motivation, better emotional control, and less anxiety. Had ECT 1.5 years ago without clear benefit.
-Taking Depakote, clonazepam, Adderall (prescribed by PCP), and gabapentin as prescribed. Also taking L-methtylfolate OTC as recommended by Dr. Genovese. Denies side effects from any of his medications.
-No safety issues reported at today's visit.

Psychiatric Review Of Systems:
Sleep changes: endorses
Appetite changes: denies
Energy changes: endorses, consistently low
Overwhelming Anxiety: endorses
Suicidal ideation: denies
Suicide plan: denies
Risk of violence towards others: no

Review of Systems
Psychiatric: Positive for depression and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations: Yes, SHH from 3/2022-4/2022.

Trauma history: Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin
Risperidone
Escitalopram
Lurasidone
Numerous others per chart review
ECT

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse - Denies

Substance Use History:
Tobacco: yes, Uses vape daily
Caffeine: no
Alcohol: no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis: yes, Daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine: no
Opiates: no

Other street drugs: yes, using heavy amounts of "whippets" prior to hospitalization. Reports using 200/week. Denies current use
Prescription drugs: Yes, per past psychiatrist misused Adderall Rx.
IVDU: No

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied in finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gour
met chef at Fork Food Lab. Mother works in admissions at Waldorf school.

Employment/source of financial support: Patient is currently unemployed. Reports having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues: Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

[table#7]:
	Bipolar affective disorder, remission status unspecified (CMS/HCC) - Primary

[table#8]:

William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more

comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.

Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.

Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.
5/10/23: Ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.

Today, he reports ongoing depression and would like to restart an SSRI. We discuss a plan for me to speak with Dr. Abernathy, his psychiatrist prior to transferring care to McGeachey, for collateral regarding past medication trials and will consider an SSRI at his next appointment.

#Bipolar Disorder with psychotic features
- Continue Depakote 2250mg ER daily
- Valproate level pending
- Discontinued haloperidol
- Continue l-methylfolate 15mg daily for antidepressant augmentation
- Reviewed [w
ww.methylpro.com](https://www.methylpro.com/) and www.deplin.com as resources to purchase this.
- Continue individual therapy with Charles Morris, LCSW
- Currently working with Ticket to Work to resume working

#Anxiety
- Continue clonazepam 1mg at bedtime PRN for anxiety
- #28 with 2 RF sent on 5/10/23

#ADHD
- Patient currently on Adderall 20mg BID through his PCP at Intermed
- I have advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse.
- Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using "whippets." Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.
- Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
- Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
- Continue gabapentin 400mg qam/800mg at bedtime
- I have coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

#TX plan
We were unable to complete a treatment plan today due to more prominent clinical concerns. We will complete this at a future visit

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
- Ht 6'1" Wt 228lbs BMI 30.1
- Vts 142/83 HR 104
- Depakote monitoring: Last level 108.0 (10/2022). CBC/CMP nml (10/2022). Repeat labs pending
- Benzodiazepine monitoring: UDS positive for clonazepam, amphetamine and THC (2/2023).
** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "I'm looking forward to appointment with Dr Mueller "

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports status quo: symptoms of depression continuing unchanged. Pt anxious to talk to new psychiatrist about his concerns about his diagnosis since last hospitalization and possible new medication approaches.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: depressive sxs, Dr's appt
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identify, cope and reduce symptoms of depression and anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT coping skills, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Coping with symptoms despite active stressors

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Charles, LCSW - 06/13/2023 8:19 AM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: **" I'm feeling a little better, I'm eating at least once a day"**

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Discussion with patient about previous diagnoses he received via previous psychiatrist, previous treatments, medications before SHH hospitalization last year. Pt would like to meet with Dr Mallo as soon as possible, is confirmed to be on cancellation list. Pt states he continues depressed, rarely getting out of bed with anhedonia, low motivation, occasional thoughts of hopelessness.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: symptoms of depression including poor ADLs, anhedonia, appetite
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: reducing and coping with mood symptoms

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Pt struggling with persistent acute mood symptoms

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "I am doing a little better"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has increased his eating to at least once a day with his parents, has been outside a little more and visiting his childhood friend nearby about 1-2 times a week. Pt reports that he has continued tapering down on the Haldol but has not noticed any difference in mood or energy. Pt states that he continues to not be motivated, with low energy, no pleasure, thoughts of hopelessness. Pt denies SI.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: appetite and activity level slightly improved, symptoms of depression persisting despite medication changes
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.
Pt answers NO to 2-question Columbia Screening. Risk is low.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: reduce mood symptoms, increase pleasurable activities

INTERVENTION(S) AND RESPONSE: Provided active listening supports.

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Pt continues struggle with acute depressive symptoms

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult with Dr Mallow re appointment for medication review

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Progress Notes - documented in this encounter

Charles, LCSW - 05/22/2023 9:57 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: " I am very depressed"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has not been eating regularly, rarely gets out of bed, experiencing thoughts of hopelessness but denies suicidal ideation. Pt has continued taper of Haldol; from 5mg/day to 2.5 mg. Pt has reduced cannabis use due to finances. Pt anxious to schedule an appointment with a new Psychiatrist to discuss his symptoms and medication management.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: acute symptoms of depression, medication changes,
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Coping skills for managing mood disorder

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, MI

PROGRESS TOWARDS GOALS: None

DESCRIBE: (as evidenced by) Pt struggling with acute symptoms

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Consult with Dr Mallo regarding patient's symptoms and schedule appointment with him, continue weekly psychotherapy.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

[table#1]:

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: " I finally met with Dr Genovese"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reported that he and Dr Genovese met and made some medication changes including stopping Haldol and adding L-methylfolate. Pt also discussed possible pland for psychiatry follow-up after Fr Genovese leaves next month. Pt states today that after thinking about it he would prefer to have a full attending psychiatrist take over his case. Pt has been applying for section 8 housing in is now formally on the wait list. Pt states he continues to not be active, with low motivation, feelings of hopelessness at times.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Mtg with Dr Genovese, med changes, symptoms of depression, follow up plan w/psychiatry
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Coping with symptoms of depression

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 36 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint:
Follow-up

HPI: William B Seretta is a 36 y.o. male with a history of bipolar disorder, ADHD, stimulant and inhalant use disorder who presents today for a follow-up appointment.

-Things have been "okay." Has been feeling pretty anxious and depressed.
-Working weekly with Charles. Has started working with Erick but had to stop due to depression.
-Very low energy and motivation. Feeling helpless and not making any progress.
-Finds that the anxiety is related to the depression.
-We discussed the ongoing Haldol taper and relation to bipolar depression. After reviewing risks of a more rapid taper, William is agreeable to discontinuing this medication. Will check in with Charles if psychotic symptoms recur.
-We additionally discussed adding in L-methylfolate to augment Depakote for antidepressant properties. We reviewed buying this OTC. William is agreeable.
-Finally we discussed transitioning to an attending or a resident for future follow-up. William will consider this and share his preference in the future.
-No safety issues reported at today's visit.

Psychiatric Review Of Systems:

Sleep changes: endorses, sleeping most of the day
Appetite changes: denies
Energy changes: endorses, consistently low
Overwhelming Anxiety: endorses
Suicidal ideation: Denies
Suicide plan:Denies
Risk of violence towards others: No

Review of Systems
Psychiatric: Positive for depression and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Musculoskeletal: Positive for weakness and myalgias.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations:Yes, SHH from 3/2022-4/2022.

Trauma history:Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin
Risperidone
Escitalopram
Lurasidone
Numerous others per chart review

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse - Denies

Substance Use History:
Tobacco:yes, Uses vape daily
Caffeine:no
Alcohol:no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis:yes, Daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine:no
Opiates:no
Other street drugs:yes, using heavy amounts of "whippets" prior to hospitalization. Reports using 5-10/day. States 100s of empty canisters found belonged to friends. Denies current use

IVDU:no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied in finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school

Employment/source of financial support: Patient is currently unemployed. Reports having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues:Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail
in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Drug or Other Allergies:

No Known Allergies

Current Medications:
[table#1]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	clonazePAM (KLONOPIN)	1 mg, Oral, Nightly PRN
•	divalproex (Depakote ER) 250 MG Tablet SR 24 hr	Please take 1 tabs (250mg) along with 4 tabs of 500mg for a total daily dose of 2250mg by mouth nightly
•	divalproex (Depakote ER) 500 MG Tablet SR 24 hr	Please take 4 tabs (2000mg) along with 1 tab of 250mg for a total daily dose of 2250mg by mouth nightly
•	gabapentin (Neurontin) 400 MG Cap	Take 1 Capsule by mouth every morning (400mg) and 2 Capsules by mouth every evening (800mg). Total daily dose 1200mg/day
•	haloperidol (Haldol) 5 MG Tab	Take one half tablet nightly for 14 days THEN stop. If psychotic symptoms recur, please resume previous dose and call doctor
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: Partial
Side effects: Yes - Fatigue
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#2]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)
•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:

Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact. Shifting restlessly on couch.
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness, likely d/t back pain
Mood: "Depressed"
Affect: appropriately reactive to conversational content, bright and interactive
Thought process: linear
Associations:logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration:conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: fair
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment: *(Based on suicidality/testing/medications. At least moderate if anything is ever prescribed)*

The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:
Depakote/Carbamezapine Monitoring:
[table#3]:

William B Seretta is a 36 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.
On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.
Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.
Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

Recent visits:
5-9/2022: Persistent depression/fatigue with no mania or psychosis. Altered medication admin timing of Depakote and gabapentin without significant improvement
9/2022-5/2023: Tapered Haldol d/t possible contribution to bipolar depression. No recurrence of psychotic symptoms.

Today, patient reports ongoing depression and persistent sedation. Will complete Haldol taper in upcoming weeks. Will augment Depakote with L-methylfolate given some evidence in bipolar depression and possible interruption of folate pathway with valproate.

#Bipolar Disorder with psychotic features
1. **Continue Depakote 2250mg ER daily**
2. **Decrease Haldol to 2.5mg at bedtime x 14 days THEN STOP **due to possible contribution to bipolar depression.

3. **Initiate l-methylfolate 15mg daily **for antidepressant augmentation
1. Reviewed www.methylpro.com and www.deplin.com as resources to purchase this.
4. Continue individual therapy with Charles Morris, LCSW
5. Currently working with Ticket to Work to resume working

#Anxiety
1. **Continue clonazepam 1mg at bedtime PRN for anxiety.**
1. #28 with 2 RF sent on 5/10/23

#ADHD
1. Patient currently on Adderall 20mg BID through his PCP at Intermed
1. I have advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse.
2. Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using 5-10 "whippets" per day. Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.
1. Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
2. Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
1. **Continue gabapentin 400mg qam/800mg at bedtime.**
2. I have coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

#TX plan
We were unable to complete a treatment plan today due to more prominent clinical concerns at today's visit. We will complete this at a future visit

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
1. Ht 6'1" Wt 228lbs BMI 30.1
2. Vts 142/83 HR 104
3. Depakote monitoring: Last level 108.0 (10/2022). CBC/CMP nml (10/2022). **Repeat labs ordered today**
4. Benzodiazepine monitoring: UDS positive for clonazepam, amphetamine and THC (2/2023).
** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
** **
RTC following July 1. Will either transfer to attending or resident per patient preference

NICHOLAS GENOVESE, MD
05/10/23

A total of 30 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

Electronically signed by Nicolas Genovese, MD at 05/10/2023 12:11 PM EDT

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: " I'm trying to stay out of bed"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Writer discussed consulting with Dr Genovese about plans for next psychiatrist when Dr G leaves in June. Pt plans to meet with Dr G to discuss options. Pt reports he met with Voc counselor and explained deferring immediate employment applications while continuing to work on resume . Pt reports that he has been forcing himself to stay out of bed which has helped with back pain and ability to play some interactive video games.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: increased activities, increased energy, plans
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: coping with anxiety/depression

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Pt able to move and use some coping skills

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter

Erick S - 04/19/2023 2:42 PM EDT

Summary: Vocational Services

Formatting of this note might be different from the original.

Date of Contact 4/19/23

Contact Location / Method - Video Conference

Funding Source - MIS - Outpatient

Staff person providing the services: Erick Schadler

Is this a VR Client? No

Did you provide information to client
regarding Career Center resources and services? No

Activity Note:
Client and Employment Specialist (ES) met today through Zoom Connect for a vocational services appointment. Client and ES worked together to update and review their resume and talk about previous work experiences. Client reports continuing to be unsure about next steps and a timeline for employment. Client reported that they will be meeting with their psychiatrist soon and should have more answers after this appointment. Client requested to have an appointment after this meeting occurs. Client and ES agreed to meet again through Zoom Connect on Wednesday, May 10th, 2023 at 1:00pm for 45 minutes.

_____

Please log at least one Task for this Activity

Task Type - Job Preparation

Time Spent (Minutes): 45 total (30 with client)

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at home .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Electronically signed by Erick S at 04/19/2023 2:43 PM EDT

Plan of Treatment - documented as of this encounter

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: I'm anxious about going to work feeling this depressed"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports continued symptoms of depression (anhedonia, low energy, over-sleeping, feelings of hopelessness) along with chronic pain. Pt wishes to suspend vocational counseling until he is feeling better. Pt would like to discuss his diagnosis and current medication regime with Dr Genovese.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Depressive sxs, anxiety regarding employment, diagnosis and meds
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral : Coping skills for depression

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) continued depressive symptoms interfering with funtioning

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult Tx Team

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45
** **

CLIENT REPORT/CONCERN: "I am the same, very depressed"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports meeting with Eric from vocational counseling to discuss options for part-time employment and patient became overwhelmed with the prospect of getting to work and performing when he can barley get out of his bed currently. Pt concerned that he is not stable in terms of his depressive symptoms and current functioning. Writer and pt discussed possibly interrupting vocational counseling until he is functioning better. Pt likewise does not feel medications are currently working and wonders about diagnoses (Bipolar I vs II) may be contributing. Writer discussed bringing this to Dr Genovese and possibly the treatment team while also attempting to identify psychiatrist assignment after Dr Genovese leaves residency.

Progress Notes - documented in this encounter

Erick S - 04/05/2023 1:26 PM EDT

Summary: Vocational Services

Formatting of this note might be different from the original.

Date of Contact 4/5/23

Contact Location / Method - Video Conference

Funding Source - MIS - Outpatient

Staff person providing the services: Erick Schadler

Is this a VR Client? No

Did you provide information to client
regarding Career Center resources and services? No

Activity Note:
Client and Employment Specialist (ES) met today through Zoom Connect for a vocational services appointment. Client reported that they have not been feeling well the last two weeks. Client reported that they have not completed the application for Benefits Counseling Services and ES provided this resource again. Client reported that their car is still not able to work for a job and this will most likely be the case for another couple months. ES discussed the client's goal and ES presented one position that is available within the parameters of the client's goal. ES presented the job of a Sales Associate for Intel Computers (entry-level) at Best Buy that works two 6 hour shifts on Saturday and Sunday. Client and ES discussed next steps for vocational services. Client reported that they are not in a rush to obtain employment for a couple months. Client reported that they would like to meet with a benefits counselor and obtain reliable transportation before obtaining employment. Client and ES agreed to review resumes at the next appointment. Client and ES agreed to meet through Zoom Connect on Wednesday April 19th, 2023 at 1:00pm for 45 minutes.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "Things are about the same, depressed"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Writer informed patient that writer had consulted with treatment team regarding coverage for Psychiatry while Dr Genovese is away and when he leaves in June. Pt would like to discuss his diagnosis and treatment with new psychiatrist as soon as possible. Pt continues to experience low energy, excess sleep, isolation, anhedonia. Pt denies SI. Pt informed that he needs to sign and send back a consent for treatment form which was sent to hi. Pt states he did not receive document and requests that it be sent to him again for him to sign.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Depressive sxs, diagnosis, consent for tx
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Coping with depression/anxiety

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Pt struggling with acute symptoms

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, continue consulting with treatment team regarding psychiatrist coverage

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC) **

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 30 minutes
** **

CLIENT REPORT/CONCERN: "I am depressed at 8/10, anxious 6/10"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he met with Eric (vocational counselor) and discussed goal of finding part-time employment. Pt continues with symptoms of depression (anhedonia, low energy, feelings of hopelessness, despair) which he has been experiencing since discharge from Inpatient hospitalization a year ago. Pt remarks that he has been treated with many anti-depessants and also had 1 year of ECT treament when his diagnosis had been Major Depressive Disorder. Pt curious about S-ketamine treatment and also if he would see a psychiatrist before May to discuss diagnosis and medications.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: description of depressive sxs, diagnosis and past treatments, S Ketamine
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Coping skills for mood problems, referral for Vocational counseling

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Pt struggling with persistent depressive symptoms

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, Consult with Tx Team regarding psychiatric coverage while Dr Genovese is away.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45
** **

CLIENT REPORT/CONCERN: "Eric from Vocational Services called me"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he made an appointment with Vocational services to receive some employment/vocational counseling next Monday. Pt reports continuing chronic pain and depression (7/10) still able to help mother with some re-arranging in garage but has not had energy or motivation to participate in any interactive gaming. Discussion of diagnosis, Bipolar I versus Bipolar II, wondering if current medication regime is working.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Depression symptoms, diagnosis questions
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Coping skills for depression

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, MI

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Pt struggling to increase any activiites

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy , consult with Attending physician regarding a permanent attending physician.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC) **

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: " Not feeling great but have been able to help my mother"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports continuing depressive symptoms (over-sleeping, low energy, low motivation ,anhedonia) . Pt has not felt motivated to play interactive games but has been able to help mother reorganize parent's garage. Pt feels a little better than last week when he did not have access to ADHD medication. Writer shared with pt that the vocational counseling referral was made and that a counselor will likely be in touch with him within the next week or so.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: depressive symptoms
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Coping with depressive symptoms, increase pleasurable activities

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Pt struggling with chronic depressive symptoms

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, f/u with referral for vocational counseling

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.
