PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that parents house suffered some burst pipes and has been helping clean up. Pt states that his flu-like illness is much better but that his chronic pain often makes it difficult to stay out of bed too long. Pt discussed his diagnosis of "Reactive Arthritis" with Ankylosing Spondylitis and how difficult to find a comfortable posture outside of bed and this leads to depressive thoughts about the future.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: glad to help mother, chronic pain, difficulty with depressive thinking
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: coping skills for depressive thoughts

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, CBT/DBT for negative thoughts, MI for behavioral change

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Pt continuing to try to increase activities, use coping skills

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.
[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC) **	

Electronically signed by Charles, LCSW at 02/22/2023 12:03 AM EST

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 35 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint:
"Things are alright"

HPI: William B Seretta is a 35 y.o. male with a history of bipolar disorder, ADHD, stimulant and inhalant use disorder who presents today for a follow-up appointment.

-"Things have been alright" lately. Has been dealing with an ongoing sickness (head cold). Experiencing primarily fatigue and body aches.
-Shares that his goals are dependent on waiting on people. Waiting to hear back from Ticket to Work.
-Working with Charles on the things around his anxiety. William shares that he suspects that bipolar II is more accurate. We discussed my diagnostic impressions around bipolar I.
-William shares that his mood has been down again. He has been staying in bed more. Not working and he is bored.
-Finds that he is still having difficulty getting up and going. Appetite is less.
-We reviewed possible implications on meds on his current symptomatology. William is agreeable to decreasing Haldol and switching Depakote dosing to minimize daytime sedation.
-No safety issues reported at today's visit.

Psychiatric Review Of Systems:

Sleep changes: endorses, sleeping around 16 hours/day.
Appetite changes: denies
Energy changes: endorses, has noticed slight improvement with decrease in medications
Overwhelming Anxiety: endorses
Suicidal ideation: Denies
Suicide plan:Denies
Risk of violence towards others: No

Review of Systems
Psychiatric: Positive for depression and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Musculoskeletal: Positive for weakness and myalgias.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations:Yes, SHH from 3/2022-4/2022.

Trauma history:Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin
Risperidone
Escitalopram
Numerous others per chart review

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse - Denies

Substance Use History:
Tobacco:yes, Uses vape daily
Caffeine:no
Alcohol:no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis:yes, Daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine:no
Opiates:no
Other street drugs:yes, using heavy amounts of "whippets" prior to hospitalization. Reports using 5-10/day. States 100s of empty canisters found belonged to friends. Denies current use
Prescription drugs: yes, per past psychiatrist misused Adderall Rx.
IVDU:no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied in finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school

Employment/source of financial support: Patient is currently unemployed. Reports having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues:Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah d
ue to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Drug or Other Allergies:
No Known Allergies

Current Medications:

•	clonazePAM (KLONOPIN)	1 mg, Oral, Nightly PRN
•	divalproex (Depakote ER) 250 MG Tablet SR 24 hr	Please take 1 tabs (250mg) along with 4 tabs of 500mg for a total daily dose of 2250mg by mouth nightly
•	divalproex (Depakote ER) 500 MG Tablet SR 24 hr	Please take 4 tabs (2000mg) along with 1 tab of 250mg for a total daily dose of 2250mg by mouth nightly
•	gabapentin (Neurontin) 400 MG Cap	Take 1 Capsule by mouth every morning (400mg) and 2 Capsules by mouth every evening (800mg). Total daily dose 1200mg/day
•	haloperidol (HALDOL)	5 mg, Oral, 2 times daily, For total daily dose of 10 mg
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: Partial
Side effects: Yes - Fatigue
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#2]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)
•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:

Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact. Shifting restlessly on couch.
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness, likely d/t back pain
Mood: "Back to before"
Affect: appropriately reactive to conversational content, bright and interactive
Thought process: linear
Associations:logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration:conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: fair
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment: *(Based on suicidality/testing/medications. At least moderate if anything is ever prescribed)*

The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:
Depakote/Carbamezapine Monitoring:
[table#3]:
Lab Results
Component	Value	Date

Other Visit Diagnoses
	Anxiety

William B Seretta is a 35 y.o. male with a history of bi
polar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.
On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.
Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.
Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

5/23: Reporting ongoing fatigue/pain from chronic Lyme. Little energy and motivation. Re-initiated on Adderall by PCP. Reports improved concentration. No overt symptoms of manic or psychotic symptoms.
6/23: Persistent daytime sedation. Will transition to Depakote ER to minimize possible contribution on sedation. Mood/psychosis otherwise stable.
8/8: Daytime sedation persistent despite change in Depakote and elimination of AM Klonopin. Hasn't received full dose of Depakote nor gabapentin due to pharmacy issues. Will resume doses before exploring med changes.
9/29: Persistent depression and low energy. Suggested consolidation of sedating medications at night to minimize this. Begin Haldol taper due to possible contribution to bipolar depression
1/18/23: Mild increase in energy and improvement in mood with decrease in Haldol. No recurrence of psychotic symtoms reported, even with increase in Adderall per PCP. Will continue alterations in meds to limit daytime sedation and taper of Haldol.
2/2023: Persistent depression. Suspect partially related to lack of structure and purpose; may still be impacted by med effects. Will continue Haldol taper and change in Depakote dosing to minimize daytime sedation.

#Bipolar Disorder with psychotic features
1. Continue Depakote 2250mg ER nightly. **Advised to switch to morning dose do peak effects happen at night**
2. **Decrease Haldol to 2.5mg BID **due to possible contribution to bipolar depression. Will continue t
aper as tolerated.
3. Continue individual therapy with Charles Morris, LCSW
4. Currently working with Ticket to Work to resume working

#Anxiety
1. **Continue clonazepam 1mg at bedtime PRN for anxiety. **
1. #28 with 0 RF sent on 1/5/23. #28 with 1 RF sent to begin on 3/3/23
2. Consider increase in gabapentin to target anxious symptoms at future visits.

#?ADHD
1. Patient has transitioned to Adderall 12.5mg BID through his PCP at Intermed
1. I have advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse.
2. Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.
3. Patient will trial discontinuing cannabis given its impact on executive functioning (see below)

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using 5-10 "whippets" per day. Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.
1. Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
2. Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
1. **Continue gabapentin 400mg qam/800mg at bedtime.**
2. I have coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
1. Ht 6'1" Wt 228lbs BMI 30.1
2. Vts 142/83 HR 104
3. Depakote monitoring: Last level 108.0 (10/2022). CBC/CMP nml (10/2022)
4. Antipsychotic monitoring: AIMS assessment at a future visit.
5. Benzodiazepine monitoring: UDS positive for clonazepam and THC (8/2022). **UDS today positive for amph and THC, benzo quant pending.**
** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).

Comment:

```
   The benzodiazepine confirmation assay
   detects lorazepam, nordiazepam, temazepam,
   7-aminoclonazepam, 2-hydroxyethylflurazepam,
   and oxazepam at a decision level of 40 ng/mL
   and alpha hydroxyalprazolam at a decision
   level of 20 ng/mL.

Adulterant Decision Limit:
 General Oxidants       200 ug/mL

The adulterant assay tests for General Oxidants,
including Chromates and Nitrites.  Adulterants are
substances either ingested or added directly to a
urine specimen to prevent the detection of drug use.

If applicable, any drug confirmation testing reported
here was developed and the performance characteristics
determined by Warde Medical Laboratory. This
confirmation testing has not been cleared or approved
by the FDA. The laboratory is regulated under CLIA as
qualified to perform high-complexity testing. This test
is used for patient testing purposes. It should not be
regarded as investigational or for research.

Test performed at Warde Medical Laboratory,
300 W. Textile Rd, Ann Arbor, MI  48108     800-876-6522
Kajal V. Sitwala, MD, PhD - Medical Director
```

Answer	Entry Date	Author	Status
Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Progress Notes - documented in this encounter
Charles, LCSW - 02/13/2023 10:39 AM EST

Formatting of this note might be different from the original.
OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: "I'm still feeling sick"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports he feels slightly better but spending too much time in bed, more depressed. Pt states that he he feels more depressed and thinks most of his symptoms and diagnosis were more consistent with Bipolar II before being hospitalized for major manic episode a year ago. Pt states that his using up to 50 whippets (Nitrous Oxide) a day for months before his hospitalization was likely key factor in experiencing the manic episode with psychotic symptoms.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: physical illness, depressive symptoms, diagnosis
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Identifying and practicing coping skills, increasing pleasurable activities

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, reality-testing, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Pt struggling with depressive symptoms and physical illness

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, consult with Genovese.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home: (60 OAKLAND AVE, YARMOUTH) in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC) **	

Electronically signed by Charles, LCSW at 02/13/2023 11:38 PM EST

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 35 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint:
"Things are going pretty well."

HPI: William B Seretta is a 35 y.o. male with a history of bipolar disorder, ADHD, stimulant and inhalant use disorder who presents today for a follow-up appointment.

-Shares that things have been "going pretty well." Meeting with Charles weekly; really enjoying therapy. He has been helping him with different techniques to manage anxiety and depression (e.g. breathing techinques, talking through)
-Has been dealing with the flu the past few weeks because his family has been dealing with it.
-Has started the Ticket to Work program. Through SSDI to find work while maintaining benefits. Is feeling excited about this development. However, he's unsure of what he wants to do.
-Mood: "Pretty good." Denies any real issues.
-In regards to Depakote, has not yet consolidated the dosing to once daily.
-In regards to the decrease in Haldol, states that he hardly noticed a change.
-In regards to decrease in clonazepam, we discussed potentially decreasing this, especially as we consolidate Depakote to nighttime dosing. We discussed reviewing his anxiety and sleep issues with Charles
-We reviewed his stimulant dosing. Denies any recurrence of psychotic symptoms with increase in stimulant.
-Plan was made for the following:
-Consolidate Depakote to nightly dosing starting tomorrow
-Decrease Haldol to 5mg BID next week
-Loop in his parents on the medication changes being made
-Discuss anxiety and sleep issues with Charles in anticipation of clonazepam decrease.

-No safety issues reported at today's visit.

Psychiatric Review Of Systems:

Sleep changes: endorses, estimates he's sleeping around 16 hours.

Appetite changes: denies
Energy changes: endorses, has noticed slight improvement with decrease in medications
Overwhelming Anxiety: endorses, around the future
Suicidal ideation: Denies
Suicide plan:Denies
Risk of violence towards others: No

Review of Systems
Psychiatric: Positive for depression and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Musculoskeletal: Positive for weakness and myalgias.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations:Yes, SHH from 3/2022-4/2022.

Trauma history:Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin
Risperidone
Escitalopram
Numerous others per chart review

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse - Denies

Substance Use History:
Tobacco:yes, Uses vape daily
Caffeine:no
Alcohol:no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis:yes, Daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine:no
Opiates:no
Other street drugs:yes, using heavy amounts of "whippets" prior to hospitalization. Reports using 5-10/day. States 100s of empty canisters found belonged to friends. Denies current use
Prescription drugs: yes, per past psychiatrist misused Adderall Rx.
IVDU:no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at U
niversity of Utah; studied in finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school

Employment/source of financial support: Patient is currently unemployed. Reports having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues:Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal

issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Drug or Other Allergies:
No Known Allergies

Current Medications:
[table#1]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	clonazePAM (KLONOPIN)	1 mg, Oral, Nightly PRN
•	divalproex (Depakote ER) 250 MG Tablet SR 24 hr	Please take 1 tabs (250mg) along with 4 tabs of 500mg for a total daily dose of 2250mg by mouth nightly
•	divalproex (Depakote ER) 500 MG Tablet SR 24 hr	Please take 4 tabs (2000mg) along with 1 tab of 250mg for a total daily dose of 2250mg by mouth nightly
•	gabapentin (NEURONTIN)	400 mg, Oral, 3 times daily
•	haloperidol (Haldol) 10 MG Tab	Take 0.5 tabs (5mg) in the morning and 1 tab (10mg) at night
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: Partial
Side effects: Yes - Fatigue
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#2]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS/HCC)
•	Lyme arthritis (CMS-HCC) (CMS/HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:

Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact. Lying in bed during Zoom call
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness, likely d/t back pain
Mood: "A bit better"
Affect: appropriately reactive to conversational content, brighter than previous.
Thought process: linear
Associations:logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration:conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: fair
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment: *(Based on suicidality/testing/medications. At least moderate if anything is ever prescribed)*

The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:

Depakote/Carbamezapine Monitoring:
[table#3]:

Problem List Items Addressed This Visit
	Mental Health
	Bipolar 1 disorder (CMS/HCC) - Primary

William B Seretta is a 35 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.
On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.
Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.
Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

5/23: Reporting ongoing fatigue/pain from chronic Lyme. Little energy and motivation. Re-initiated on Adderall by PCP. Reports improved concentration. No overt symptoms of manic or psychotic symptoms.
6/23: Persistent daytime sedation. Will transition to Depakote ER to minimize possible contribution on sedation. Mood/psychosis otherwise stable.
8/8: Daytime sedation persistent despite change in Depakote and elimination of AM Klonopin. Hasn't received full dose of Depakote nor gabapentin due to pharmacy issues. Will resume doses before exploring med changes.
9/29: Persistent depression and low energy. Suggested consolidation of sedating medications at night to minimize this. Begin Haldol taper due to possible contribution to bipolar depression
1/18/23: Mild increase in energy and improvement in mood with decrease in Haldol. No recurrence of psychotic symtoms reported, even with increase in Adderall per PCP. Will continue alterations in meds to limit daytime sedation and taper of Haldol.

#Bipolar Disorder with psychotic features
1. Continue Depakote 2250mg ER nightly. Had still being doing 1000mg in the morning, and 1250mg in the evening. **Advised to trial dosing it at all at night.**
2. **De
crease Haldol to 5mg BID **due to possible contribution to bipolar depression. Will continue taper as tolerated. Will trial this one week after making changes to Depakote
3. **Continue individual therapy with Charles Morris, LCSW**
4. I have received a clinical summary from the patient's previous psychiatrist, Dr. Kathleen Abernathy.
5. Currently working with Ticket to Work to resume working

#Anxiety
1. Continue clonazepam 1mg at bedtime PRN for anxiety.

1. #28 with 0 RF sent on 1/5/23. #28 with 0 RF sent to begin on 2/2/23
2. Consider increase in gabapentin to target anxious symptoms at future visits.

#?ADHD
1. Patient has begun Adderall 30mg BID through his PCP at Intermed as of this past month
1. I have advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse.
2. Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.
3. Patient will trial discontinuing cannabis given its impact on executive functioning (see below)

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using 5-10 "whippets" per day. Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.
1. Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
2. Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
1. Continue gabapentin 400mg qam/800mg at bedtime.
2. I have coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
1. Ht 6'1" Wt 228lbs BMI 30.1
2. Vts 142/83 HR 104
3. Depakote monitoring: Last level 108.0 (10/2022). CBC/CMP nml (10/2022)
4. Antipsychotic monitoring: AIMS assessment at a future visit.
5. Benzodiazepine monitoring: UDS positive for clonazepam and THC (8/2022). **Due next in-person visit**
** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
Verbal consent provided for ROI Bill Seretta (831-1438) and mother Evelyn Baird (233-2226).
** **
RTC in 4 weeks or sooner as needed

NICHOLAS GENOVESE, MD
01/18/23

A total of 40 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45
** **

CLIENT REPORT/CONCERN: "I have been in bed sick for 2 weeks"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that had flu-like symptoms since New Years,has stayed in bed, experiencing brain-fog, without Adderal (due to pharmacy shortages). Pt continues to use cannabis gummies which patient feels helps with depression. Pt states he will be focusing on calling the "Ticket to Work" program this week about part-time work.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Physically ill foe 2 weeks, w/o ADHD meds fo 2 weeks, wants to focus on part-time work
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Reduction of depressive symptoms, identifying pleasurable activities and setting uproutine

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, MI for behavioral change

PROGRESS TOWARDS GOALS: Minimal

DESCRIBE: (as evidenced by) Physically ill for 2 weeks

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy, vocational goals

This visit was performed as a Video Visit.

The patient was physically located at Patient Home in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE:30 minutes
** **

CLIENT REPORT/CONCERN: " I had PCP appointment, am receiving referral for Spine MD for diagnostics on my back pain."

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports that he has been getting out of house once a day to walk dog and/or do errands, has been playing interactive video games with friends but still in in constant chronic back pain. Pt states that being more active has given him some hope and that he is hoping new medical consults will help him with hiback pain.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: PCP visit, physical activities, pleasure in plaing video games with friends
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Discussed pt's ability to follow-through on behavioral change

INTERVENTION(S) AND RESPONSE: Provided active listening supports, empathic reflection, MI re behavioral changes

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) pt's ability to follow-through on behavioral change

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy

This visit was performed as a Video Visit.

The patient was physically located at Patient Home in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Progress Notes - documented in this encounter

Charles, LCSW - 11/28/2022 4:50 PM EST

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 Minutes
** **

CLIENT REPORT/CONCERN: " I have been sleeping better"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt reports walking his dog daily, increasing video-playing with fiends, and attempting to eat better. Pt states that chronic pain is the chief barrier to moving more and that he moves his posture constantly in order to avoid significant pain. Pt states that he uses sleeping and cannabis as coping skills which don't work well but do provide some relief.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Feeling more alert, walking dog daily brings him and dog happiness, chronic pain depressing
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral : following through on commitments such as walking dog daily

INTERVENTION(S) AND RESPONSE: Provided active listening supports.

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) following through with developing daily routines that he enjoys

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Consult with Dr Genovese regarding thoughts on alternative pain management referral or consult with Pt's PCP, continue weekly psychotherapy.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

[table#1]:
1.	**Bipolar 1 disorder (CMS/HCC) **

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: ""Back pain, depression, lack of motivation"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt states that he has struggled with taking any action in last week but was able to walk his dog to end of driveway and back 3 times. Pt also has tried playing more interactive video games in order to socialize with gamer friends but feels that "I don't deserve the right to enjoy gaming because he has not been working on employment and is generally unmotivated. Pt encouraged to structure dog-walks and gaming into a daily routine which later could include employment activities. Pt responsive to suggestions.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Lack of motivation, conflicted over enjoying gaming, enjoying walking his dog.
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Developing a daily routine/structure to first include enjoyable activities and then include some responsibilities

INTERVENTION(S) AND RESPONSE: Provided active listening supports, MI for changing daily activity

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Follow-through of plan to walk his dog

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continues weekly psychotherapy, focus on increased pleasurable activity and responsible routine.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: " I've been experiencing GI difficulties"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt states he met with Dr Genovese and decided to reduce dosage of Haldol using slow titration. Pt complains of losing his independence since losing car with accident in his driveway. Pt states he has to ask his parents for Transportation. Pt decided he would like to continue with current psychotherapy here at McGeachy. Pt acknowledges that he sleeps a lot, ADLs are poor and feels unmotivated.
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: GI problems, chronic pain, lack of independence, unmotivated
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral: Discussed goal of developing daily structure of activities he will pursue despite lack of motivation such as walking his dog to the end of his driveway and back every day.

INTERVENTION(S) AND RESPONSE: Provided active listening supports. Mi used to elicit change vocabulary form patient which he is willing to act on.

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Patient demonstrated progress by engaging in identification of target symptoms, exploring potential strategies for addressing those symptoms

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weeklt psychotherapy with goal of increased activity which is routine.

This visit was performed as a Video Visit.

The patient was physically located at Patient Home in Maine, the provider was located at work .

The following individuals were present during the telemedicine encounter:SERETTA,WILLIAM B (William B Seretta)

Verbal consent was obtained from the patient or the patient's legal/healthcare representative. The consent can be located on the MaineHealth website at www.Mainehealth.org > Click Care & Services> and use the search feature and type “Telehealth Service” to locate the consent.

Patient identification was confirmed using two patient identifiers, Name and DOB.

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 35 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint:
"I've gotten some stuff done."

HPI: William B Seretta is a 35 y.o. male with a history of bipolar disorder, ADHD, stimulant and inhalant use disorder who presents today for a follow-up appointment.

-Shares that he "has gotten some stuff done."
-Notes that he has done a couple of sessions with therapists, both here and Intermed. Knows he has to choose, is thinking he will stay Chares Morris, LCSW.
-He is feeling optimistic about working with the therapist.
-Still shares that he is still feeling depressed, still sleeping most of the day, energy level is still low (though somewhat improving).
-Still endorsing significant worry about the future, Feels like he isn't accomplishing much of anything. Feeling like a burden.
-Shares that he has been dosing Depakote in the AM despite ER formulation and majority of gabapentin in the morning. Advised to consolidate most at night to minimize daytime sedation.
-Patient denies any recurrence in psychotic symptoms. We reviewed decreasing Haldol given possible contribution to bipolar depression.
-Reports that a goal of his is to get back into working. Still feels unable to do this at this time.
-No safety issues reported at today's visit.

Psychiatric Review Of Systems:

Sleep changes: endorses, sleeping up to 22 hours/day. Sleeping most of the day (average 14-16 hours).
Appetite changes: denies
Energy changes: endorses, hasn't noticed any improvement
Overwhelming Anxiety: endorses, around the future
Suicidal ideation: Denies
Suicide plan:Denies
Risk of violence towards others: No

Review of Systems
Psychiatric: Positive for depression and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Musculoskeletal: Positive for weakness and myalgias.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations:Yes, SHH from 3/2022-4/2022.

Trauma history:Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin

Risperidone
Escitalopram
Numerous others per chart review

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse - Denies

Substance Use History:
Tobacco:yes, Uses vape daily
Caffeine:no
Alcohol:no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis:yes, Daily use. 0.25 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
Cocaine:no
Opiates:no
Other street drugs:yes, using heavy amounts of "whippets" prior to hospitalization. Reports using 5-10/day. States 100s of empty canisters found belonged to friends. Denies current use
Prescription drugs: yes, per past psychiatrist misused Adderall Rx.
IVDU:no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied in finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school

Employment/source of financial support: Patient is currently unemployed. Reports having a job lined up in data analysis through "local and stat
e governments." Reports having money in Bitcoin but lost this.

Financial Issues:Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Drug or Other Allergies:
No Known Allergies

Current Medications:
[table#1]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	clonazePAM (KLONOPIN)	1 mg, Oral, Nightly PRN
•	divalproex (Depakote ER) 250 MG Tablet SR 24 hr	Please take 1 tabs (250mg) along with 4 tabs of 500mg for a total daily dose of 2250mg by mouth nightly
•	divalproex (Depakote ER) 500 MG Tablet SR 24 hr	Please take 4 tabs (2000mg) along with 1 tab of 250mg for a total daily dose of 2250mg by mouth nightly
•	gabapentin (NEURONTIN)	400 mg, Oral, 3 times daily
•	haloperidol (HALDOL)	10 mg, Oral, 2 times daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: Partial
Side effects: Yes - Fatigue
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#2]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS-HCC)
•	Lyme arthritis (CMS-HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:

Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact. Lying in bed during Zoom call
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness
Mood: "The same"
Affect: blunted.
Thought process: linear
Associations:logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration:conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: fair
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment: *(Based on suicidality/testing/medications. At least moderate if anything is ever prescribed)*

The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:
Depakote/Carbamezapine Monitoring:
[table#3]:
Lab Results
Component	Value	Date

Other Visit Diagnoses
	Anxiety
	Medication monitoring encounter

William B Seretta is a 35 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who

presented as a referral from SHH after his first life
time hospitalization due to manic and psychosis in the community.
On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.
Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.
Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

5/23: Reporting ongoing fatigue/pain from chronic Lyme. Little energy and motivation. Re-initiated on Adderall by PCP. Reports improved concentration. No overt symptoms of manic or psychotic symptoms.
6/23: Persistent daytime sedation. Will transition to Depakote ER to minimize possible contribution on sedation. Mood/psychosis otherwise stable.
8/8: Daytime sedation persistent despite change in Depakote and elimination of AM Klonopin. Hasn't received full dose of Depakote nor gabapentin due to pharmacy issues. Will resume doses before exploring med changes.
9/29: Persistent depression and low energy. Suggested consolidation of sedating medications at night to minimize this. Begin Haldol taper due to possible contribution to bipolar depression

#Bipolar Disorder with psychotic features
1. Continue Depakote 2250mg ER nightly. Had still being doing 1000mg in the morning, and 1250mg in the evening. **Advised to trial dosing it at all at night.**
2. **Decrease Haldol to 5mg qam/10mg at bedtime **due to possible contribution to bipolar depression. Will continue taper as tolerated. Will trial this one week after making changes to Depakote and gabapentin.
3. **Continue individual therapy with Charles Morris, LCSW**
4. I have received a clinical summary from the patient's previous psychiatrist, Dr. Kathleen Abernathy.
5. We will discuss a referral to vocational services at our future appointment.

#Anxiety
1. Continue clonazepam 1mg at bedtime PRN for anxiety.
1. #28 with 0 RF sent on 9/29/22
2. Consider increase in gabapentin to target anxious symptoms at future visits.

#?ADHD
1. Patient has resumed Adderall 20mg BID through his PCP at Intermed.
1. I have advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse.
2. Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.
3. Patient will trial discontinuing cannabis given its impact on executive functioning (see below)

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using 5-10 "whippets" per day. Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.
1. Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
2. Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
1. Continue gabapentin 400mg TID for peripheral neuropathy. Had been dosing 800mg qam, 400mg at bedtime. **Advised to dose 400mg qam and 800mg at bedtime to avoid daytime sedation.**
2. I have coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute

risk of harm as of this writing is low.

Monitoring
1. Ht 6'1" Wt 228lbs BMI 30.1
2. Vts 142/83 HR 104
3. Depakote monitoring: Last level 111.4. CBC nml. CMP with mild elevations of LFTs (4/2022). **Repeat levels pending; instructed to obtain before next visit**
4. Antipsychotic monitoring: AIMS assessment at a future visit.
5. Benzodiazepine monitoring: UDS positive for clonazepam and THC (8/2022).
** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
** **
RTC in 4 weeks or sooner as needed

NICHOLAS GENOVESE, MD
09/29/22

A total of 40 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE:45 minutes
** **

CLIENT REPORT/CONCERN: "I had an auto accident in my driveway but I was not hurt"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt mentioned that he had a MVA since last seeing writer and while being evaluated with PCP at Intermed he learned that he was referred to an Intermed psychologist who he will meet with next week. Pt states that he continues to be depressed, staying in bed most of day, avoiding others accept eating with his parents at dinner time. Pt remarks that he continues to use cannabis which, while under its influence, enhances his mood and relieves pain.
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: MVA,cannabis use, lack of meaning day-to-day, appointment with a psychologist.
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low.

GOALS ADDRESSED: Emotional / Behavioral, supportive listening, MI re cannabis use, reflection on patient's ability to order "meaning" through developing his own schedule of those things he would like to do and following through with initial first steps infollowing a daily and weekly schedule.

INTERVENTION(S) AND RESPONSE: Provided active listening supports.

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Patient demonstrated progress by engaging in development of treatment and safety/stability plan, identification of target symptoms, exploring potential strategies for addressing those symptoms.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly psychotherapy.

Progress Notes - documented in this encounter

Charles, LCSW - 09/06/2022 3:53 PM EDT

Formatting of this note might be different from the original.

OUTPATIENT INDIVIDUAL PROGRESS NOTE

DURATION OF SERVICE: 45 minutes
** **

CLIENT REPORT/CONCERN: "I have had extreme depression and anxiety for at least the last 4 months"

PRESENTATION *(include relevant medication, substance use and mental status observations)*: Pt states that he feels his level of anxiety and depression has worsened; pt complains of extreme fatigue, major back pain, very poor functioning (spends most of day in bed watching TV), unable to pursue former pleasurable activities such as on-line digital games due to fatigue and low motivation. "I don't have a purpose". "I have earned the right to feel better"
Speech: Normal
Cognition Consciousness: Alert
Attention: Follows Conversation
Appearance/Behavior Dress: Appropriate
Attitude Toward Interviewer: Cooperative
Motor Behavior: Normal
Language: Clear
Memory: Oriented X3
Immediate Recall: WNL
Short Term Memory: WNL
Long Term Memory: WNL
Mood: Depressed
Affect: flat
Thought Form: logical and coherent
Thought Content: Sense of hopelessness,fatigue, low motivation, reduced use of cannabis (1/4 gram of THC per day), SI 1-2 times a week
Perception: Normal
Insight: fair
Judgement: fair
SI/HI: Pt has no current thoughts of suicide.

RISK ASSESSMENT *(include any report of self-abuse, suicidal or homicidal ideation, plan, intent, or behaviors, and clinical action taken)*: Pt answers NO to 2-question Columbia Screening. Risk is low

GOALS ADDRESSED: Emotional / Behavioral: Pt interested in identifying coping skills for anxiety/depression, forms of meds or alternative treatments

INTERVENTION(S) AND RESPONSE: Provided active listening supports. Started to develop a safety/stability plan and identified target symptoms
Continued to develop therapeutic rapport
Identified and discussed possible needs fortreatment plan

PROGRESS TOWARDS GOALS: Moderate

DESCRIBE: (as evidenced by) Patient demonstrated progress by engaging in development of treatment and safety/stability plan, identification of target symptoms, exploring potential strategies for addressing those symptoms and Identified and discussed possible needs for treatment plan.

PLAN OF TREATMENT *(include updates to assessment, diagnosis, treatment plan and Care Coordination for significant new issue reported):* Continue weekly individual psychotherapy, develop initial treatment plan with pt at next meeting

Results - documented in this encounter

NM LOC SPECT CT, SINGLE AREA, SINGLE DAY BONE - Final result (09/01/2022 3:28 PM EDT)

Anatomical Region	Laterality	Modality
		Nuclear Medicine

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/01/2022 2:00 PM EDT	

Narrative

09/01/2022 4:40 PM EDT

EXAM: NM LOC SPECT CT, SINGLE AREA, SINGLE DAY BONE

INDICATION: chronic mid back pain worse lately STUDY NOTES: 21.8 mci mdp in lac.

COMPARISON: MRI spine dated back to 10/04/2021.

RADIOPHARMACEUTICAL: 12.8 mCi technetium 99m MDP

TECHNIQUE: Planar scintigraphic images of the thoracic spine were obtained. Multiplanar SPECT and fused SPECT/CT images were also obtained and reviewed.

FINDINGS: There is normal activity within the thoracic spine..

IMPRESSION: Normal examination.

This report has been read by Frank Weng, MD and will be reviewed by the attending radiologist covering this service. 9/1/2022 4:05 PM

I, Michael Quinn, MD have personally reviewed the images and interpretation and agree with the final report. Dictated by Frank Weng, MD.

WORKSTATION: WS6

* * THIS IS AN ELECTRONICALLY VERIFIED REPORT CREATED USING VOICE RECOGNITION * * 9/1/2022 4:38 PM

Narrative

09/01/2022 4:40 PM EDT

EXAM: NM LOC SPECT CT, SINGLE AREA, SINGLE DAY BONE

INDICATION: chronic mid back pain worse lately STUDY NOTES: 21.8 mci mdp in lac.

COMPARISON: MRI spine dated back to 10/04/2021.

RADIOPHARMACEUTICAL: 12.8 mCi technetium 99m MDP

TECHNIQUE: Planar scintigraphic images of the thoracic spine were obtained. Multiplanar SPECT and fused SPECT/CT images were also obtained and reviewed.

FINDINGS: There is normal activity within the thoracic spine..

IMPRESSION: Normal examination.

This report has been read by Frank Weng, MD and will be reviewed by the attending radiologist covering this service. 9/1/2022 4:05 PM

I, Michael Quinn, MD have personally reviewed the images and interpretation and agree with the final report. Dictated by Frank Weng, MD.

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 35 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint:
"I've been hanging in there."

HPI: William B Seretta is a 35 y.o. male with a history of bipolar disorder, ADHD, stimulant and inhalant use disorder who presents today for a follow-up appointment.

-Reports that he's been doing "alright." Has been "hanging in there."
-Feels like he's been under the weather the past few months. Feeling pretty "down." Finds any little bump along the way makes him feel paralyzed.
-Isn't able to engage in his responsibilities. Doesn't think he has a good grip on what he's doing.
-Wants to be more active. Wants to be able to get up out of bed easier.
-Shares that he hasn't been taking the 250mg of the ER, just the 500mg of the ER.
-Hasn't noticed any change in his mood, but has been stuck in bed due to sickness.
-In terms of sickness: Sharing that he has been dealing with diarrhea, occasional vomiting. Little energy. Feels like he's missing a chunk.
-In terms of anxiety: Shares it's been high due to not feeling he hasn't made any progress. Doesn't feel like he's meeting others expectations (parents wanting him to get things going).
-Finds that sleep at night is challenging without the Klonopin. Shares he has difficulty with shutting his brain down at night. Worried about his own health and his family's health.
-In terms of the last time he was doing well, shares that it's been years. Hard to pinpoint.
-Shares that his physical pain has a huge impact on his mood. Has been seeing a chiropractor.
-We discussed therapy. Shares that he isn't opposed to working with another. I discussed options for referrals and he is agreeable at this timr.
-We reviewed resuming the medications he wasn't able to fill (Depakote 2250 and gabapentin 400 TID) and obtaining labs thereafter. We agreed to meet in 3 weeks to discuss med adjustments.
-No safety issues reported at today's visit.

Psychiatric Review Of Systems:

Sleep changes: endorses, sleeping up to 22 hours/day. Sleeping most of the day (average 14-16 hours).
Appetite changes: denies
Energy changes: endorses, hasn't noticed any improvement
Overwhelming Anxiety: endorses, around the future
Suicidal ideation: Denies
Suicide plan:Denies
Risk of violence towards others: No

Review of Systems
Psychiatric: Positive for depression and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Musculoskeletal: Positive for weakness and myalgias.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations:Yes, SHH from 3/2022-4/2022.

Trauma history:Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin
Risperidone
Escitalopram
Numerous others per chart review

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse - Denies

Substance Use History:
Tobacco:yes, Uses vape daily
Caffeine:no
Alcohol:no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis:yes, Daily use. 0.5 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
8/8: Reports that he is 0.25gram/day
Cocaine:no
Opiates:no
Other street drugs:yes, using heavy amounts of "whippets" prior to hospitalization. Reports using 5-10/day. States 100s of empty canisters found belonged to friends. Denies current use
Prescription drugs: yes, per past psychiatrist misused Adderall Rx.
IVDU:no

No previous substance use t
reatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied in finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school

Employment/source of financial support: Patient is currently unemployed. Reports having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues:Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Drug or Other Allergies:
No Known Allergies

Current Medications:
[table#1]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	clonazePAM (KlonoPIN) 1 MG Tab	TAKE ONE TABLET BY MOUTH NIGHTLY AS NEEDED
•	divalproex (Depakote ER) 250 MG Tablet SR 24 hr	Please take 1 tabs (250mg) along with 4 tabs of 500mg for a total daily dose of 2250mg by mouth nightly
•	divalproex (Depakote ER) 500 MG Tablet SR 24 hr	Please take 4 tabs (2000mg) along with 1 tab of 250mg for a total daily dose of 2250mg by mouth nightly
•	gabapentin (NEURONTIN)	400 mg, Oral, 3 times daily
•	haloperidol (HALDOL)	10 mg, Oral, 2 times daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: Partial
Side effects: Yes - Fatigue
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#2]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)

•	Bipolar 1 disorder (CMS-HCC)
•	Lyme arthritis (CMS-HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:

Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact. Shifting uncomfortably in seat regularly
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness
Mood: "Not much different."
Affect: blunted.
Thought process: linear
Associations:logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration:conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: fair
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment: *(Based on suicidality/testing/medications. At least moderate if anything is ever prescribed)*

The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:
Depakote/Carbamezapine Monitoring:

Problem List Items Addressed This Visit
	Mental Health
	Severe cannabis use disorder (CMS/HCC)
	Bipolar 1 disorder (CMS-HCC) - Primary

William B Seretta is a 35 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.
On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis

of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.
Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.
Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

5/23: Reporting ongoing fatigue/pain from chronic Lyme. Little energy and motivation. Re-initiated on Adderall by PCP. Reports improved concentration. No overt symptoms of manic or psychotic symptoms.
6/23: Persistent daytime sedation. Will transition to Depakote ER to minimize possible contribution on sedation. Mood/psychosis otherwise stable.
8/8: Daytime sedation persistent despite change in Depakote and elimination of AM Klonopin. Hasn't received full dose of Depakote nor gabapentin due to pharmacy issues. Will resume doses before exploring med changes.

#Bipolar Disorder with psychotic features
1. Continue Depakote 2250mg ER nightly.
1. **Hasn't gotten the 250mg through the pharmacy.** **This will be prescribed today.**
2. Continue Haldol 10mg BID
1. Consider taper in time due to evidence of contribution to bipolar depression
3. **I have referred the patient internally for individual therapy. **We
discussed PsychologyToday.com as well.
4. I have received a clinical summary from the patient's previous psychiatrist, Dr. Kathleen Abernathy.
5. We will discuss a referral to vocational services at our future appointment.

#Anxiety
1. Continue clonazepam 1mg at bedtime PRN for anxiety.
1. #28 with 0 RF sent on 8/2/22
2. Consider increase in gabapentin to target anxious symptoms at future visits.

#?ADHD
1. Patient has resumed Adderall 20mg BID through his PCP at Intermed.
1. I have advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse.
2. Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.
3. Patient will trial discontinuing cannabis given its impact on executive functioning (see below)

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using 5-10 "whippets" per day. Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.25 grams/daily. Denies inhalant use.
1. Patient has been trialing decreasing marijuana use though with worsening of pain. Will encourage his continued taper of this substance.
2. Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
1. Continue gabapentin 400mg TID for peripheral neuropathy. Consider uptitration in setting of anxiety.
1. **Has not received in some time; informed there is a refill at the pharmacy.**
2. I have coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
1. Ht 6'1" Wt 228lbs BMI 30.1
2. Vts 142/83 HR 104
3. Depakote monitoring: Last level 111.4. CBC nml. CMP with mild elevations of LFTs (4/2022). **Repeat levels pending; informed to wait until 1 week on new dose of Depakote.**
4. Antipsychotic monitoring: AIMS assessment at a future visit.
5. Benzodiazepine monitoring: UDS positive for amphetamines and THC. Sample unfortunately disposed of prior to quant ordered for clonazepam (5/2022). **Repeat UDS negative for benzodiazepines; confirmation pending.**
** **

ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
** **
RTC in 3 weeks or sooner as needed

NICHOLAS GENOVESE, MD
08/08/22

A total of 40 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

Electronically signed by Nicolas Genovese, MD at 08/08/2022 12:20 PM EDT

Comment:

```
   The benzodiazepine confirmation assay
   detects lorazepam, nordiazepam, temazepam,
   7-aminoclonazepam, 2-hydroxyethylflurazepam,
   and oxazepam at a decision level of 40 ng/mL
   and alpha hydroxyalprazolam at a decision
   level of 20 ng/mL.

Adulterant Decision Limit:
 General Oxidants       200 ug/mL

The adulterant assay tests for General Oxidants,
including Chromates and Nitrites.  Adulterants are
substances either ingested or added directly to a
urine specimen to prevent the detection of drug use.

If applicable, any drug confirmation testing reported
here was developed and the performance characteristics
determined by Warde Medical Laboratory. This
confirmation testing has not been cleared or approved
by the FDA. The laboratory is regulated under CLIA as
qualified to perform high-complexity testing. This test
is used for patient testing purposes. It should not be
regarded as investigational or for research.

Test performed at Warde Medical Laboratory,
300 W. Textile Rd, Ann Arbor, MI  48108     800-876-6522
William G. Finn, MD  - Medical Director

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987
MR#: E765841
Age: 35 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint:
"I'm still feeling pretty depressed."

HPI: William B Seretta is a 35 y.o. male with a history of bipolar disorder, ADHD, stimulant and inhalant use disorder who presents today for a follow-up appointment.

-Did a COVID test this morning which was negative. Is currently on the mend.
-Has a wedding coming up this weekend.
-Has been feeling like he has been sedated lately. Feels like he has a hard time getting out of bed. Will sleep mostly because "my dreams have been more interesting."
-In reviewing his medications, we identify he takes his morning medications consistently, but then returns to bed.
-Mood: Feels like he's more in the depressed range. Makes it "almost not worth living." Feels like he's not participating in life. Denies hypomanic symptoms. No gambling behaviors.
-Social media: Participates in chat threads on Reddit and Instagram. Has been having less bot followers.
-Hasn't been making electronic music lately.
-Job: Was trying to do a boot camp for programming. Feels like he "hit a wall." Feels like so many things need to be in place.
-Adderall: Finds that he has more energy, able to clean the house.
-Anxiety: Worried about his future with his parents. They are supporting him financially.
-Relationship with parents: Father is always stressed. Mother is pt's main rock, but she is stressed out with work. Patient feels that they are frustrated and don't want to see him flounder.
-Patient reports taking only 1000mg BID of Depakote. Reports no significant recurrence in symptoms. We discussed transition to ER formulation to minimize daytime sedation; patient in agreement.
-No safety issues reported at today's visit.

Psychiatric Review Of Systems:

Sleep changes: endorses, sleeping most of the day
Appetite changes: denies
Energy changes: endorses, fatigued throughout daytime
Overwhelming Anxiety: endorses, around the future
Suicidal ideation: Denies
Suicide plan:Denies
Risk of violence towards others: No

Review of Systems
Psychiatric: Positive for depression and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Musculoskeletal: Positive for weakness and myalgias.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations:Yes, SHH from 3/2022-4/2022.

Trauma history:Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin
Risperidone
Escitalopram
Numerous others per chart review

Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse - Denies

Substance Use History:
Tobacco:yes, Uses vape daily
Caffeine:no
Alcohol:no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis:yes, Daily use. 0.5 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
6/23: Reports that he is smoking bowl pack/night. 0.5 gram/day
Cocaine:no
Opiates:no
Other street drugs:yes, using heavy amounts of "whippets" prior to hospitalization. Reports using 5-10/day. States 100s of empty canisters found belonged to friends. Denies current use
Prescription drugs: yes, per past psychiatrist misused Adderall Rx.
IVDU:no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to
the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied in finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school

Employment/source of financial support: Patient is currently unemployed. Reports having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues:Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Drug or Other Allergies:
No Known Allergies

Current Medications:
[table#1]:
Current Outpatient Medications
Medication	Instructions
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	20 mg, Oral, Daily, 1-2 tabs daily as needed
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	clonazePAM (KLONOPIN)	1 mg, Oral, 2 times daily PRN
•	gabapentin (NEURONTIN)	400 mg, Oral, 3 times daily
•	omeprazole (PRILOSEC)	30 mg, Oral, Daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: Partial
Side effects: Yes - Fatigue
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#2]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS-HCC)
•	Lyme arthritis (CMS-HCC)
•	Rectal bleeding
•	B12 deficiency
•	Vitamin D deficiency

Psychiatric Specialty Exam:

Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact. Shifting uncomfortably in seat regularly
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness
Mood: "Pretty low."
Affect: blunted. Tearful at times
Thought process: linear
Associations:logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration:conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: fair
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment: *(Based on suicidality/testing/medications. At least moderate if anything is ever prescribed)*

The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:
Depakote/Carbamezapine Monitoring:
[table#3]:
Lab Results
Component	Value	Date
	VALPROATE	111.4 (H)	04/01/2022

Problem List Items Addressed This Visit
	Mental Health
	Severe cannabis use disorder (CMS/HCC)
	Bipolar 1 disorder (CMS-HCC) - Primary
Other Visit Diagnoses
	Anxiety

William B Seretta is a 35 y.o. male with a history of bipolar I
, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.
On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.
Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.
Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

5/23: Reporting ongoing fatigue/pain from chronic Lyme. Little energy and motivation. Re-initiated on Adderall by PCP. Reports improved concentration. No overt symptoms of manic or psychotic symptoms.
6/23: Persistent daytime sedation. Will transition to Depakote ER to minimize possible contribution on sedation. Mood/psychosis otherwise stable.

#Bipolar Disorder with psychotic features
1. **Transition to Depakote ER to minimize daytime sedation. **Reports only taking 1000mg BID the past month. **Initiate Depakote 2250mg ER nightly **(increased dose given decreased bioavailability of ER formuation)
1. 30 day supply with 1 RF sent on 6/23/22
2. Continue Haldol 10mg BID
1. 30 day supply with 1 RF sent on 6/23/22
3. I have received a clinical summary from the patient's previous psychiatrist, Dr. Kathleen Abernathy.
4. We will discuss a referral to vocational services at our future appointment.

#Anxiety
1. Continue clonazepam 1mg BID PRN for anxiety. Typically using 1mg/night. **Patient instructed to avoid daytime dose to minimize sedation**
1. 28 day supply with 0 RF sent on 5/23/22
2. Altered Rx to be 1mg nightly PRN going forward.
2. Consider increase in gabapentin to target anxious symptoms at future visits.

#?ADHD
1. Patient has resumed Adderall 20mg BID through his PCP at Intermed. Per PMP, last filled on 5/11.
1. I have advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse.
2
. Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.

3. Patient will trial discontinuing cannabis given its impact on executive functioning (see below)

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using 5-10 "whippets" per day. Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; 0.5 grams/daily. Denies inhalant use.
1. Patient has been trialing decreasing marijuana use though with worsening of pain. Will continue to engage in motivational interviewing and risk-benefit discussion
2. Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
1. Continue gabapentin 400mg TID for peripheral neuropathy. Consider uptitration in setting of anxiety
1. 30 day supply with 1 RF sent on 6/23/22
2. I have coordinated with the patient's PCP's office. Most recent documentation scanned into media tab

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
1. Ht 6'1" Wt 228lbs BMI 30.1
2. Vts 142/83 HR 104
3. Depakote monitoring: Last level 111.4. CBC nml. CMP with mild elevations of LFTs (4/2022). **Repeat levels pending**
4. Antipsychotic monitoring: AIMS assessment at a future visit.
5. Benzodiazepine monitoring: UDS positive for amphetamines and THC. Sample unfortunately disposed of prior to quant ordered for clonazepam (5/2022). **Will need repeat UDS at next visit**
** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
** **
RTC on 4 weeks or sooner as needed

NICHOLAS GENOVESE, MD
06/23/22

A total of 40 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

Electronically signed by Nicolas Genovese, MD at 06/23/2022 4:31 PM EDT

Yes	03/11/2022 12:40 PM EST	Nancy, RN	Active

Patient Instructions - documented in this encounter

Patient Instructions

Michael Kleinman, DO - 06/07/2022 12:59 PM EDT

Formatting of this note might be different from the original.

Your examination demonstrates improved sensation as compared to the last visit. Please continue to avoid the use of nitrous oxide which is the likely factor that lead to your B12 deficiency.

Electronically signed by Michael Kleinman, DO at 06/07/2022 1:00 PM EDT

Progress Notes - documented in this encounter

Michael Kleinman, DO - 06/07/2022 12:50 PM EDT

Formatting of this note might be different from the original.

Chief Complaint: Neuropathy follow-up

Polyneuropathy, peripheral sensorimotor axonal
35-year-old man with B12 deficiency and was found to have a severe axonal generalized sensorimotor polyneuropathy on nerve conduction testing 6 months ago. The etiology of his B12 deficiency is most likely related to an acute and high-dose exposure to nitrous oxide prior to the development of the symptoms. This was unknown at his last visit. Nitrous oxide causes inactivation of the B12 dependent enzyme methionine synthase. This occurs in a dose-dependent fashion. His high-dose exposure is the most likely cause of his severe neuropathy. Thankfully with cessation of nitrous oxide use and B12 replacement his symptoms have improved though he remains with persistent signs of a sensorimotor polyneuropathy. Some degree of permanent damage is certainly possible.
– We discussed the likely etiology of his polyneuropathy.
– He is highly encouraged to continue to avoid nitrous oxide use.
– No further work-up is needed at this time.
– He may return here as needed.

HPI: 35-year-old man with a history of reactive arthritis and B12 deficiency who was seen 6 months ago for evaluation of lower extremity numbness and tingling. He was found to have evidence of a severe generalized sensorimotor polyneuropathy.

Strength has been fine. He has noted that the tingling in his LE has receded a bit. This is now involving the feet to the mid shins. He has normal sensation in his hands. He attributes his improvement to having his B12 levels normalized.

His balance has been alright. He has not had any falls.

Medications:
[table#1]:
Outpatient Medications Marked as Taking for the 6/7/22 encounter (Office Visit) with Kleinman, Michael S, DO
Medication	Sig	Dispense	Refill
•	amphetamine-dextroamphetamine (Adderall) 20 MG Tab	Take 20 mg by mouth daily 1-2 tabs daily as needed		
•	omeprazole (PriLOSEC) 20 MG Capsule Delayed Release	Take 30 mg by mouth daily		
•	clonazePAM (KlonoPIN) 1 MG Tab	Take 1 Tablet (1 mg total) by mouth 2 times daily as needed	56 Tablet	0
•	divalproex (Depakote) 500 MG Tablet Delayed Response	Take 2 Tablets (1,000 mg total) by mouth 2 times daily Total daily dose is 2250mg Am = 1000mg PM= 1250mg	120 Tablet	1
•	gabapentin (Neurontin) 400 MG Cap	Take 1 Capsule (400 mg total) by mouth 3 times daily	120 Capsule	1
•	haloperidol (Haldol) 10 MG Tab	Take 1 Tablet (10 mg total) by mouth 2 times daily	60 Tablet	1
•	cholecalciferol (VITAMIN D3) 125 MCG (5000 IU) Tab	Take 1 Tablet (5,000 Units total) by mouth nightly	1 Tablet	0
•	Simponi 50 MG/0.5ML Solution Auto-injector	every 30 days Unk dose, monthly, for Lyme flare-up, last 10 days ago.

VITALS:
**BP 121/84 (Patient Position: Sitting) | Pulse 66 | Wt 102.1 kg (225 lb) | BMI 29.69 kg/m² **

Physical Examination:
****
Focused examination demonstrates normal strength in bilateral upper and lower extremities. Muscle bulk at bilateral extensor digitorum brevis is reduced. Reflexes are 1+ throughout bilateral upper extremities. Bilateral knee jerks and ankle jerks are 1+. Temperature sensation is reduced to the distal shins. Vibratory sensation is felt for approximately 8 seconds at bilateral great toes. His gait is steady.

Thank you for involving me this patient's care.
A total of 25 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable/billable services.

E&M Follow Up Note

Identifying Information:
Name: William B Seretta
DOB: 5/2/1987

MR#: E765841
Age: 35 y.o.
Sex: male
Gender identity: male
Preferred Pronoun if specified:

**PCP: **Pierce, Daniel C, MD

Chief Complaint:
"Things have been okay."

HPI: William B Seretta is a 35 y.o. male with a history of bipolar disorder, ADHD, stimulant and inhalant use disorder who presents today for a follow-up appointment.

-Reports things have been "okay."
-States that he has been exhausted. Reports that he has been diagnosed with Lyme disease 5 yrs ago and attributes it to this.
-Shares that he was seeing Dr. Keelan Wu for holistic treatment in the past.
-Reports that he has been put back on Adderall. States that he has been put back onto 20mg IR. Notes that he has more energy, improved focus/concentraiton, able to accomplish things like doing laundry, making appointments.
-Advised of risk of manic or psychotic recurrence with stimulants. Patient expressed understanding.
-Reports compliance with his medications.
-Has been spending most of his days in bed. Trying to figure out his work regimen. Parents want him to SQL programming which he is not feeling ready for.
-Patient wants to get back to work in the community. We discussed Voc services here in the office but he declines at this time. Wishes to discuss at next appointment.
-Feels that his mood is still pretty low. Energy has been very low.
-Reports that his parents are happy to see some progress in him.

No safety issues reported at today's visit.

Psychiatric Review Of Systems:

Sleep changes: endorses
Appetite changes: endorses, sleeping heavily throughout day
Energy changes: denies
Overwhelming Anxiety: endorses, around returning to work
Suicidal ideation: Denies
Suicide plan:Denies
Risk of violence towards others: No

Review of Systems
Psychiatric: Positive for depression and anxiety.
Constitutional: Positive for fatigue.
Respiratory: Negative.
Gastrointestinal: Negative.
Musculoskeletal: Positive for weakness and myalgias.
Cardiovascular: Negative.

**Past Psych History **
Suicide Attempts: No

Out-patient treatment: Previously seen by Dr. Abernathy.

In-patient hospitalizations:Yes, SHH from 3/2022-4/2022.

Trauma history:Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin
Risperidone
Escitalopram
Numerous others per chart review

Family Psych History
Suicide -Denies

Major Mental Illness -Denies
Substance Abuse - Denies

Substance Use History:
Tobacco:yes, Uses vape daily
Caffeine:no
Alcohol:no, previous heavy use 4 years ago. Reports stopping cold turkey
Cannabis:yes, Daily use. 0.5 grams/day. Obtains from dispensary. Helps with anxiety and insomnia.
5/23: Reports that he is smoking 0.25 grams/day. Has worsening in his pain with this.
Cocaine:no
Opiates:no
Other street drugs:yes, using heavy amounts of "whippets" prior to hospitalization. Reports using 5-10/day. States 100s of empty canisters found belonged to friends. Denies current use
Prescription drugs: yes, per past psychiatrist misused Adderall Rx.
IVDU:no

No previous substance use treatment history.

Social History:
Childhood history: Grew up in Yarmouth, ME with his parents and older sister. Reports that the upbringing was very supportive. Completed school up through college. Went to the Waldorf School through childhood. Obtained all A's. Went to college in several states, but completed school at University of Utah; studied in finance. Per chart review, patient's substance use began in college.

Family History: Father works as a gourmet chef at Fork Food Lab. Mother works in admissions at Waldorf school

Employment/source
of financial support: Patient is currently unemployed. Reports having a job lined up in data analysis through "local and state governments." Reports having money in Bitcoin but lost this.

Financial Issues:Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

Current: Living with his parents currently. On SSDI.

Drug or Other Allergies:
No Known Allergies

Current Medications:
[table#1]:
Current Outpatient Medications
Medication	Instructions
•	cholecalciferol (VITAMIN D3)	5,000 Units, Oral, Nightly
•	divalproex (DEPAKOTE)	1,000 mg, Oral, 2 times daily, Total daily dose is 2250mg Am = 1000mg PM= 1250mg
•	gabapentin (NEURONTIN)	400 mg, Oral, 3 times daily
•	haloperidol (HALDOL)	10 mg, Oral, 2 times daily
•	Simponi 50 MG/0.5ML Solution Auto-injector	Every 30 days, Unk dose, monthly, for Lyme flare-up, last 10 days ago.

Taken as prescribed: Yes
Medication response: Partial
Side effects: Yes - Fatigue
Prescription Monitoring Program checked today: yes

Past Medical History:
[table#2]:
Patient Active Problem List
Diagnosis
•	Polyneuropathy, peripheral sensorimotor axonal
•	Severe cannabis use disorder (CMS/HCC)
•	Bipolar 1 disorder (CMS-HCC)
•	Lyme arthritis (CMS-HCC)
•	Rectal bleeding
•	B12 deficiency

| • | Vitamin D deficiency |

Psychiatric Specialty Exam:

Appearance and Behavior: appropriate appearance, cooperative with questions, good eye contact. Shifting uncomfortably in seat regularly
Speech: regular rate, volume, prosody
Language: appropriate, no aphasia
Psychomotor activity: notable for restlessness
Mood: "Pretty low."
Affect: appropriately reactive to conversational content
Thought process: linear
Associations:logical
Thought content: denies suicidal ideation, intent or plan. Denies homicidal ideation. No overt paranoid or delusional content
Attention/Concentration:conversationally intact
Orientation: grossly intact
Recent and remote memory: conversationally intact
Fund of knowledge: fair
Insight: fair
Judgment: fair

There were no vitals filed for this visit.

Risk Assessment: *(Based on suicidality/testing/medications. At least moderate if anything is ever prescribed)*

The patient's risk of complications and/or morbidity/mortality of patient management is high.

Laboratory:
Depakote/Carbamezapine Monitoring:
[table#3]:
Lab Results
Component	Value	Date
	VALPROATE	111.4 (H)	04/01/2022

William B Seretta is a 35 y.o. male
with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.

On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.
Given patient's history of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.
Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

5/23: Reporting ongoing fatigue/pain from chronic Lyme. Little energy and motivation. Re-initiated on Adderall by PCP. Reports improved concentration. No overt symptoms of manic or psychotic symptoms.

#Bipolar Disorder with psychotic features
1. Continue Depakote 1000mg qam, 1250mg at bedtime.
1. 30 day supply with 1 RF sent on 4/21/22
2. Continue Haldol 10mg BID
1. 30 day supply with 1 RF sent on 4/21/22
3. I have received a clinical summary from the patient's previous psychiatrist, Dr. Kathleen Abernathy.
4. We will discuss a referral to vocational services at our next appointment.

#Anxiety
1. Continue clonazepam 1mg BID PRN for anxiety. Typically using 1mg/night.
1. 28 day supply with 0 RF sent on 5/23/22
2. Will work to decrease off of this medication in time
2. Consider increase in gabapentin to target anxious symptoms at future visits.

#?ADHD
1. Patient has resumed Adderall 20mg BID through his PCP at Intermed. Per PMP, last filled on 5/11.
1. I have advised strongly against the use of this medication to patient given risk of manic and/or psychotic relapse.
2. Per notes from past psychiatrist, patient had one instance of misuse of this medication in the past.
3. Patient will trial discontinuing cannabis given its impact on executive functioning (see below)

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using 5-10 "whippets" per day. Reporting previo
us use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.
Reporting daily cannabis use; decreased to 0.25 grams/daily. Denies inhalant use.
1. Patient has decreased marijuana use though with worsening of pain. Will continue to engage in motivational interviewing and risk-benefit discussion
2. Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
1. Continue gabapentin 400mg TID for peripheral neuropathy. Consider uptitration in setting of anxiety
2. Will coordinate with patient's PCP prior to next meeting.

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
1. Ht 6'1" Wt 228lbs BMI 30.1
2. Vts 142/83 HR 104
3. Depakote monitoring: Last level 111.4. CBC nml. CMP with mild elevations of LFTs (4/2022). **Repeat levels ordered at today's visit.**
4. Antipsychotic monitoring: AIMS assessment at a future visit.
5. Benzodiazepine monitoring: **UDS positive for amphetamines and THC. Sample unfortunately disposed of prior to quant ordered for clonazepam**

** **
ROI signed for patient's former psychiatrist Dr. Abernathy.
ROI signed for patient's PCP Daniel Pierce, MD
** **
RTC on 4 weeks or sooner as needed

NICHOLAS GENOVESE, MD
05/23/22

A total of 40 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable procedures.

Electronically signed by Nicolas Genovese, MD at 05/23/2022 4:39 PM EDT

Nicolas Genovese, MD - 04/20/2022 1:00 PM EDT

Formatting of this note might be different from the original.

INITIAL PSYCHIATRIC EVALUATION

I. Identifying Information
**Name: **William B Seretta
**DOB: **5/2/1987
**MR#: **E765841
**Age: **34 y.o.
**Sex: **Male
**Marital Status: **single
**Race or Ethic Origin: **Caucasian

II. Chief Complaint: "I have been with the same psychiatrist for 2 decades without a change in meds. They have me on good ones since Spring Harbor."

**III. HPI **(include current psych ROS):
William B Seretta is a 34 y.o. male with a history of bipolar I, cannabis use, nitrous oxide use, and gambling addiction who presents after a referral from SHH after his first lifetime psychiatric hospitalization. Patient was hospitalized on an involuntary basis from 3/11-4/5 due to manic symptoms in the community eventually leading to an altercation with his father and subsequent police involvement.

During his hospitalization, he was weaned off of his home medications of fluoxetine, lamotrigine, Adderall and clonazepam while he was titrated onto Depakote and olanzapine. The olanzapine was cross-titrated to haloperidol due to weight gain towards the latter part of the hospitalization. Patient was euthymic without signs of psychosis at time of discharge.

Of note, patient's mother contacted the family navigator at SHH reporting that the patient had once again become paranoia and delusional. She was unsure if patient was still on his medications.

Today, the patient presents on time for his scheduled appointment. On interview, he presents with a bright affect and linear thought process.

Patient reports that he suspects that he has struggled with bipolar for many years and notes that he has had several episodes of bipolar. He notes that his most recent episode was the most severe which led to his hospitalization; notes that is family noticed that things were much worse than he was able to notice. When we reviewed aspects of his presentation in the chart the patient did agree with what was reported, though he does note that he did not feel as ill as his parents made him out to be. He additionally reports some social strife with his parents due to the events that led to his hospitalization (reports that they told him he was going to the ED for an intake not for hospitalization) and still reports that they are having interpersonal difficulties because they are not trusting of him.

Patient reports that he is mood and psychotic symptoms have been largely in control with his current medication regimen.

He reports a history of repeated manic episodes, estimating they happen 1-2 times a year, with depression predominating the remainder of his time. He notes that during his manic episodes he will spend money excessively, make irrational decisions, will sleep a little during the night and more during the day, experience racing thoughts and grandiose delusions. He notes that these instances last a couple of days. Often during these times, he will spend all the money that he has saved throughout the year.

Patient also reports a history of gambling addiction where he would engage in sports batting and subsequently blackjack which she would play online. He notes that he has "played through $3 million." It is unclear whether his behaviors occurred in the context of a manic episode or during periods of euthymia.

During his depressive periods, he states that he will be in bed all day, have little energy to go throughout the day, will feel excessively guilty about things he has done and will not do certain things because he does not feel he "deserves it." He denies any suicidal ideation during this time.

Currently, the patient states that he is struggling primarily with anxiety and with symptoms of ADHD. He reports ongoing difficulties with inattention, hyperactivity, and irritability. He reports that he is going to be starting a job working in data analysis that his family friend had gotten him and is worried about his ability to perform at this job. In regards to
his anxiety, he reports that he has a constant feeling of anxiety, which can increase at times and cause physical symptoms such as tightness in chest and digestive issues. He reports that he spends most of his time worrying about finances, stating that his parents had accidentally wiped a hard drive that he had with BitCoin on it, as well as his dad ripping up debit cards that were mailed to him. He endorses feelings of poor concentration and fatigue related to his anxiety.

Psychiatric Review Of Systems:
sleep: yes, "better since ever been" sleeping 10 hours a night
appetite changes: no, "I eat great"
weight changes: no
energy/anergy: yes, decreased
concentration: yes, decreased
interest/pleasure/anhedonia: no, denies anhedonia
somatic symptoms: yes, GI symptoms when significantly anxious
libido: Did not inquire
anxiety/panic: yes, see HPI
guilty/hopeless: no, excessive guilt when depressed but denies currently
S.I.B.s/risky behavior: no
any drugs: yes, cannabis use
alcohol: no** **

Hypomania:No
Mania:Yes, in past

[x] euphoria [ ] irritable [ ] intrusive [x] rapid thoughts [x] rapid speech [x] impulsive [ ] task orientation [x] grandiosity [x] increased energy [x] decreased sleep need
Psychosis?
Hallucinations?No
Delusions? Unclear. Patient recognizes delusional content of having jobs at Google and Apple in the past, though still reports historical elements that may be delusional (e.g. having had millions of dollars, millions of followers on Instagram)
Disorganization? No

Anxiety?
Panic? Yes
Phobias?No
GAD?Yes
OCD?No
Abused?No
PTSD?No

Adjustment? Denies

Others:
ADHD? Yes
LD? No
Bulimia/Anorexia? No
Impulse Control? Yes
Somatiform? No
Factitious? No
Dissociation?No
Sleep Disorders?No
Movement? No

Personality: Independence Intro/Extrovert Risk taking

Cluster A (eccentric) – paranoid/schizoid/schizotypal [ ]

Cluster B (dramatic) – antisocial/borderline/narcissistic/historic [ ]

Cluster C (anxious) – avoidant/obsessive/dependent [ ]

Risk/Lethality:
Current Suicidality: No specific plan to harm self
Current Homicidality:Denies
Weapons in the home: no

**IV. Past Psych History **
Suicide Attempts: No

Out-patient treatment::Previously seen by Dr. Abernathy.

In-patient hospitalizations:Yes, SHH from 3/2022-4/2022.

Trauma history:Reports an instance where a friend shot a gun off near him. Denies any intrusive symptoms from the incident.

Past psychiatric medications:
Fluoxetine
Adderall
Lamotrigine
Clonazepam
Gabapentin
Numerous others per chart review

V. Family Psych History
Suicide -Denies
Major Mental Illness -Denies
Substance Abuse - Denies

VI. Physical Health Status and Medical History
Medical Review Of Systems:
A comprehensive review of systems was negative.

Past medic
al and surgical problems (*including traumatic brain injury)*: Vit B12 def (s/p repletion in the hospital), bilateral LE neuropathy, recurrent rectal bleeding (reportedly resolved at today's visit), vit D def (on replacement)..

History of repeated concussions during college years.

Current problems:
[table#3]:

Financial Issues:Unemployed

Military History: Denies

Legal Problems (cross-reference with issues of lethality): Went to jail in Utah due to marijuana possession. Denies current legal issues.

Individual(s) or group(s) that serve as major supports *(cite if none present)*: Parents, friend Aaron

**X: Mental Status Exam: **
Mental Status Exam:
General Appearance and Attitude toward exam:
normal appearance. He is clean and well-groomed. He exhibits willing attitude toward examiner.
Psych Musculoskeletal/Motor: normal muscle strength and tone. Motor exam does not reveal tremor, abnormal mouth movement, abnormal jaw movement or abnormal neck movement .
Mood and Affect: Mood is expansive. Other Affect: Bright affect, even when discussing difficult subjects.
Perception: normal.
Behavior: Behavior is cooperative.
Speech: Speech is not rapid, pressured, dysarthric, loud or low pitched.
Thought Process: Thought process is focused.
Thought Content: Thought content is delusional **(possibly some residual grandiose delusions)**. Thought content is not paranoid. He denies homicidal ideation or suicidal ideation.
Cognition and Memory: normal memory. Cognitive exam reveals alert cognitive status.
Judgment and Insight: Judgement is fair. Insight is fair. Other insight: Recognizes bipolar illness. May not fully appreciate the

severity of illness

**XI. Patient Strengths and Supports **
Strengths: intelligent, resilient, personable
Supports: Family, Friend Aaron
Leisure/Recreational activities: Skiing, Releasing music
Psychiatric Advance directives*(if yes, list how to access)*: No

XII. Evaluation Summary and Formulation*: *
William B Seretta is a 34 y.o. male with a history of bipolar I, ADHD, history of inhalant misuse (nitrous), and cannabis use who presented as a referral from SHH after his first lifetime hospitalization due to manic and psychosis in the community.
On initial evaluation, the patient appears euthymic and without overt psychotic symptoms on the medication regimen of Depakote and Haldol. He does report some historical elements which may represent grandiose delusions (e.g. having had several million dollars, having millions of followers on Instagram, releasing highly successful music) though without collateral information this is hard to fully ascertain. Will discuss with former outpatient psychiatrist, and should patient allow, discuss with parents for more comprehensive history. Primary complaints on evaluation were symptoms of anxiety and inattention which have persisted despite treatment of his underlying mood disorder. Differential for the symptoms include ADHD, combined type given history of inattention, hyperactivity, and irritability; though this is confounded by patient's daily cannabis use. Could also consider diagnosis of generalized anxiety disorder given symptoms of generalized worry, poor concentration and fatigue.
Given patient's h
istory of significant inhalant use with subsequent medical sequela (e.g. peripheral polyneuropathy), ongoing sobriety is paramount to maintaining psychiatric stability. Fortunately, the patient endorses only using cannabis on initial evaluation, and is amenable to stopping this in order to mitigate inattentive symptoms. Close monitoring of his substance use will be necessary, with rapid referral to substance use treatment program should he relapse in his inhalant use.
Therapeutically, the patient appears to be benefiting with a combination of mood stabilizing and antipsychotic medications. Patient's Haldol may require titration if delusional thought content becomes more apparent. Patient's gabapentin, which is currently used for polyneuropathy, can also be increased in order to target his anxiety. As needed clonazepam will be continued for the time being while more permanent treatment options for anxiety are developed. Additionally, can consider initiation of alpha agonist medications for symptoms of inattention and anxiety, as these have much less chance of precipitating mania/psychosis than stimulant medications. Finally, building a therapeutic alliance and maintaining trust between patient and physician will be crucial in providing effective care for the patient.

XIII. Diagnoses:
Diagnoses and all orders for this visit:

Anxiety
- clonazePAM (KlonoPIN) 1 MG Tab; Take 1 Tablet (1 mg total) by mouth 2 times daily as needed
- gabapentin (Neurontin) 400 MG Cap; Take 1 Capsule (400 mg total) by mouth 3 times daily

Bipolar disorder, in full remission, most recent episode manic (CMS-HCC)
- haloperidol (Haldol) 10 MG Tab; Take 1 Tablet (10 mg total) by mouth 2 times daily
- divalproex (Depakote) 500 MG Tablet Delayed Response; Take 2 Tablets (1,000 mg total) by mouth 2 times daily Total daily dose is 2250mg Am = 1000mg PM= 1250mg
- divalproex (Depakote) 250 MG Tablet Delayed Response; Take 1 Tablet (250 mg total) by mouth nightly

**XIV: Initial Treatment Plan: **
#Bipolar Disorder with psychotic features
1. Continue Depakote 1000mg qam, 1250mg at bedtime.
1. 30 day supply with 1 RF sent on 4/21/22
2. Continue Haldol 10mg BID
1. 30 day supply with 1 RF sent on 4/21/22
3. Patient has discontinued benztropine. No evidence of EPS symptoms on initial evaluation.
4. I will coordinate with patient's former psychiatrist prior to next appointment (ROI signed today).

#Anxiety
1. Continue clonazepam 1mg BID PRN for anxiety
1. 28 day supply with 0 RF sent on 4/21/22
2. Will work to decrease off of this medication in time
2. Consider increase in gabapentin to target anxious symptoms at future visits.

#?ADHD
1. Will obtain historical information regarding patient's symptoms from his former psychiatrist.
2. Patient will trial discontinuing cannabis given its impact on executive functioning (see below)
3. Consider alpha agonist in the future of anxiety and inattentive symptoms

#Cannabis use
#Inhalant Use (Nitrous)
Patient denies current inhalant use; previously using 5-10 "whippets" per day. Reporting previous use was as an "escape" from interpersonal challenges with family. Is in maintenance stage of change.

Reporting daily cannabis use; 0.5 grams/day.
1. Patient will trial discontinuing cannabis in order to decrease contribution in inattentive symptoms. Continue motivational interviewing regarding this.
2. Assess for recurrence of inhalant misuse. Consider referral to substance-focused therapist should this become problematic

#Healthcare maintenance
#Peripheral neuropathy
1. Continue gabapentin 400mg TID for peripheral neuropathy. Consider uptitration in setting of anxiety
2. Will coordinate with patient's PCP as needed.

Safety
Patient without history of SI or SIB. Has a history of physical altercations when acutely manic/psychotic. Risk will be mitigated by ongoing psychiatric treatment in order
to maintain clinical stability. Denies SI or HI at today's meeting. No access to firearms. Acute risk of harm as of this writing is low.

Monitoring
3. Ht 6'1" Wt 228lbs BMI 30.1
4. Vts 142/83 HR 104
5. Depakote monitoring: Last level 111.4. CBC nml. CMP with mild elevations of LFTs (4/2022). Will obtain repeat levels at next visit
6. Antipsychotic monitoring: Will complete AIMS assessment at next in-person appointment.

ROI signed for patient's former psychiatrist Dr. Abernathy.

RTC on 5/9 at 3:30pm or sooner as needed

NICHOLAS GENOVESE, MD

Electronically signed by Leora Rabin, MD at 04/23/2022 3:43 PM EDT

Associated attestation - Leora Rabin, MD - 04/23/2022 3:43 PM EDT
Formatting of this note might be different from the original.
Teaching Physician Attestation of Resident Supervision
I was present for the entire psychiatric evaluation, have reviewed Dr. Genovese's note and agree with above including impression and plan. In addition, note severity of patient's depression and past ECT treatment in 2020.
Patient as well describes symptoms consistent with Gambling Disorder and reports he is planning to pursue on-line Gambling disorder treatment. He may benefit from naltrexone to target gambling and substance use - consider referral to residential treatment.

Discharge Summaries - documented in this encounter

Line Pelletier, PAC - 04/03/2022 7:16 PM EDT

Formatting of this note might be different from the original.

Inpatient Psychiatry Discharge Summary

[table#1]:
PATIENT:	William B Seretta
DOB:	5/2/1987
SEX:	male
MRN:
CSN	E765841
121592985

**Date of Admission: **3/11/2022
**Date of Discharge: **4/5/22
**Time Spent: **30+ minutes : orders, patient interview, update discharge summary

History of Present Illness:

The initial Psychiatric Evaluation was completed by Sara Powers, MD. The History of Present Illness from that evaluation is seen below:

William B Seretta is a 34 y.o. male with history of bipolar 2, anxiety, and ADHD who presents from MMC ED where he self presented at the urging of his parents. The patient has had several weeks of increasingly manic behavior. This has included grandiose statements, reckless spending, aggressive behavior in the community leading to police involvement during an altercation with his father. He believes he has lucrative business potential, believing he has millions of dollars to invest. Reports from family also indicate a large amount of cannabis and nitrous oxide, with 100's of empty whippets found. He made statements to family that he would attack with a knife if the police or EMS was called on him. The patient himself expresses concern that there is something wrong with his parents.

While in the ED, the patient was inititaed on a psychiatric emergency because of threatening statements and agitated behavior. He

was treated with IM droperidol. He has been observed to remain in an agitated manic state since his arrival on 3/7. He was started on olanzapine 10 mg twice a day, with the addition of Depakote 500 mg twice daily yesterday evening. He has been compliant with oral medications.

I met with the patient today for initial interview in a consult room. He presents as expansive with an irritable edge. He states he is very happy to be here and out of the emergency department. He reports that he is here because his mother "tricked" him into going to emergency department. He is not sure why people were concerned about him or wanted an evaluation. He states he was kept in the emergency department without adequate food or ability to use his phone. He explains that he must have his phone so he can complete a transaction on the financial app Robin Hood. He states that if he is not able to do this he will lose thousands of dollars and his job at Sound Cloud. He tells me that he put some of his own music on sound cloud and it got millions of listens and he was offered a job. He also says he had jobs at google an apple although lost these while he was in the emergency department. I explained that he will not be able to use his phone or the computer. He responded by saying that he would then walk out the door. I explained his involuntary status. He asked me if I would complete the transaction on his phone if he gave me instructions. I declined to do this. He became somewhat irritable, although maintained behavioral control. He stated he could not talk to me any longer until he figured this out and said he would call his mother and asked her to make the transaction on his behalf. He then left to complete this and terminated our interview.

**Significant Physical Findings: **The patient was seen for routine medical evaluation on admission. He was identified as having a B12 level of 205, which had decreased since previously obtained in December. There was concern for contribution from the patient's illicit nitrous oxide use. He was started on repletion with IM B12 1000 mcg daily x7 days followed by 1000 mcg weekly. The patient reported worsening of his chronic bilateral lower extremity polyneuropathy, likely in response to B12 repletion. He was started on gabapentin and titrated to 400 mg TID with good effect. In addition, the patient reported some rectal bleeding during hospitalization. This was recurrence of a chronic condition for which he has follow-up and recommendation of colonoscopy thro ugh Portland Gastroenterology. Finally, for his newly identified vitamin D deficiency, he was initiated on vitamin D3 5000 international units daily.

Summary of Clinical Course
Summary: This was a first psychiatric hospitalization for this patient, targeting stabilization of mania and psychosis. Diagnostically, their symptoms are consistent with a diagnosis of bipolar 1 disorder.

The patient was admitted to 2W in the usual fashion. While the patient initially presented with irritability, grandiosity, and tendency to become easily agitated, there were no major behavioral issues during hospitalization, including no psychiatric emergencies, seclusions, or restraints. A phone restriction was put in place after the patient repeatedly called 911 and several police departments seeking aid in being discharged. Diagnostically, the patient's presentation was consistent with a first episode mania with psychosis. The patient endorsed nitrous oxide use leading up to hospitalization, raising concern for a possible contribution of substances to his presentation. His home medications were stopped in the ED, including fluoxetine, lamotrigine, Adderall, and clonazepam. He was started on olanzapine and depakote. He demonstrated improvement in mood primarily with titration of depakote. Dose was titrated to 2500 mg with a valproate level of 111. His CMP demonstrated slight elevations in LFTs, and while he remained asymptomatic, dose was decreased to 2250 mg. Olanzapine was increased to a total daily dose of 40 mg, with persistent symptoms of psychosis. In addition, the patient gained approximately 20 pounds during the first 2 weeks of hospitalization while taking olanzapine. For these reasons, olanzapine was cross-titrated to haloperidol. The patient demonstrated euthymic mood with resolution of delusional thinking and paranoia. He demonstrated insight into his substance use and expressed motivation for sobriety.

The care team spoke with the patient's parents on several occassions. A family meeting took place prior to discharge. Parents discussed expectations for the patient to return home, which were agreed upon.

This APP became involved in the patient's care on the day prior to and the day of discharge. At the time of discharge, the patient is safe and forward thinking without any suicidal ideation whatsoever. He is eating well, sleeping well, and attending to ADLs. He is showing no signs of mania or psychosis. He is agreeable to working collaboratively with the social worker and this provider on discharge planning, signing documents, discussing aftercare and a safety plan. The patient's acute suicide risk is low at this time. He denied SI for duration of hospitalization and has no history of suicide attempts. He is aware of crisis resources and completed a safety plan prior to discharge.

Consultations: Primary care, spoke with Dr. Pierce's office
Legal Status while in Hospital: Involuntary , committment

Discharge Mental Status Exam
General Appearance and Manner: Clean and well groomed, Relates well and Good eye contact
Motor: Normal muscle strength and tone
Gait and Station: Regular
Speech: Normal
Language: Descriptive

Thought Process: Clear/Goal directed
Associations: Logical/Relevant
Thought Content: Denies SI, Denies HI and No evidence of delusions and paranoia
Mood: "Good"
Affect: Appropriate
Attention/Concentration: No difficulties
Fund of Knowledge: Intact
Intellectual Functioning: Average as evidenced by: Educational Attainment, Occupational Function, Fund of General Knowledge and Ability of Abstract Thinking
Memory: Within normal limits
Recall Objects Immediately: 3 of 3
Recall Objects after 5 min: 3 of 3
Orientation: Fully oriented
Insight: Fair based on the patient's ability to state reason for admission, to identify problems, to state cause of problems, to identify one's role in problems and to identify means to feel better
Judgement: Fair

Columbia Suicide Scale
Columbia Suicide Rating Scale - Since Last Asked
2. Since you were last asked, have you actually had any thoughts of killing yourself?: No (04/03/22 1759)
6.Have you done anything, started to do anything, or prepared to do anything to end your life?: No (04/03/22 1759)
Suicide Risk Level - Frequent Screener: Low (03/27/22 1015)

Post Hospital Care Plan:

Medical/ Primary Care Provider Follow Up: Dr. Pierce 4/12

PATIENT DISCHARGE INSTRUCTIONS and FOLLOW-UP APPOINTMENTS:
Last Diet Order: No diet orders on file

[table#10]:
Discharge Orders
	Future Labs/Procedures	Expected by	Expires
	AMB Referral to Gastroenterology	As directed	
	Comments:
	What is the clinical question? Recurrent rectal bleeding
	AMB Referral to MMC OP PSYCH ADULT	As directed	
	Comments:
	What is the clinical question? Patient requests psychiatry, discharge Tuesday next week.
	Questions:		
	Considering your total clinical experience with this particular population, how mentally ill is the patient at this time?: 5 = Markedly ill - intrusive symptoms that distinctly impair social/occupational function or cause intrusive levels of distress
	Recent Symptoms: Increased anxiety
	Worsened mood
	Aggression
	Relevant social history: Family conflict
	Relationship discord
	Substance misuse
	Treatment History: Therapist

Progress Notes - documented in this encounter

Julia H - 04/05/2022 9:54 AM EDT

Summary: SW - Safety Plan

Formatting of this note might be different from the original.

SAFETY PLAN

Behavioral Health Safety Plan

**Warning signs (thoughts, images, mood, situation, behavior) that a crisis may be developing: ** Increased sleeping, onset of "tightness in chest", racing thoughts changes in sleep, thinking mood or energy levels

**Helpful strategies for me to use when I am struggling, without contacting others: ** Tends to use sleep as coping mechanism but interest in learning more adaptive and healthier options

Name(s) of supports to contact: Therapist, Sara, godmother Gail, parents, McGeachy Hall

Social settings that Provide Distraction: Spending time with family, computer, music

Helpful strategies for others to know when I am struggling: Sleeping more, spending more time alone, changes in eat, sleeping or daily routine

If/When behaviors are out of individual control, Care plan for dependents, pets, and notifications: support, encourage self care and daily routine, suggest calling OP providers as needed

The one thing that is most important to me and worth living for is: obtain independent living

Strategies to make my environment safe: Maintain medication, avoid substances, ask for help and seek support, attend OP appoitnments
**I am aware of the following community supports and I will access these services as needed: ** All known and reviewed

Electronically signed by Julia H at 04/05/2022 10:42 AM EDT

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 25

Time of Service: 3:43 PM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint: "My parents want to control my life at every step."

Total Hours of Sleep: 10 (04/04/22 0500)
Appetite: Good (04/04/22 1000)
Hygiene: Shower (03/19/22 1049)

History of Present Illness:
Nursing report the patient had an uneventful evening. He slept well, medication adherent. Isolated to his room. Safe both on and off the unit.

William was seen earlier today along with social worker Julia Healey. Is pleasant upon approach, feels that he is ready to discharge tomorrow as planned. We discussed aftercare planning, medication adherence, employment. Also, the patient states he is going to have to face his gambling addiction, and is willing to participate in initial meeting with a CPA, hired by his parents to begin sorting through his finances. Initially the patient was reluctant as he states he does not have access to his computer records here and suggested that he reschedule. Ultimately, he agrees to the Zoom meeting here tomorrow prior to discharge if only to please his parents. Otherwise, he states he is thinking clearly and feeling ready to return to the community. He has a few medical issues, and understands follow-up appointments are scheduled for PCP, neurology and gastroenterology. Without new issues today.

Data
The chart was reviewed today, including medical staff, nursing and social work notes. This case was also discussed in interdisciplinary treatment team with supervising physician Dr. Gabe Matos.

Labs: None since last progress note

Medical Decision Making Level of Risk: Moderate

Assessment

William B Seretta is a 34 y.o. male with prior diagnoses of bipolar 2 disorder, anxiety, and ADHD who presents as an involuntary patient from the MMC ED with symptoms of mania. Symptoms have reportedly been present for several weeks and the patient has recently threatened violence towards family members and police. His parents have found several 100 empty whippit containers in the patient's room, raising concern for a substance-induced component to his presentation. The patient has been adherent with olanzapine and depakote in the emergency department, with some improvement noted, however he remains grandiose, irritable, delusional, and has extremely poor insight.

3/17: Patient showed some improvement in mood yesterday as he appeared calmer and less pressured, however, today he is quite manic and agitated. He could not tolerate interview with the care team and was yelling loudly before terminating the meeting. He has called 911 repeatedly despite redirection from staff. Phone restriction will be put in place.

3/18: Little improvement in manic symptoms at this point. Plan to maximize olanzapine and titrate depakote to TDD of 2000 mg.

3/21: Patient is tolerating increased doses of depakote and olanzapine. Some improvement in mood noted today, although patient remains delusional with extremely poor insight. Weight g
ain noted and likely attributable to olanzapine. At this time, benefit of this medication outweighs ongoing risk of weight gain.

3/24: Given ongoing delusional/paranoid thinking and significant weight gain (~20lbs) with high dose olanzapine, plan to taper and introduce haloperidol now that depakote is therapeutic.

3/31: Patient presents as euthymic with improvement in delusions. Engaged in successful family meeting discussing transition home. We are establishing aftercare with plan for discharge home next week.

Diagnoses
Principal Problem:
Bipolar 1 disorder (CMS-HCC)
Active Problems:
Polyneuropathy, peripheral sensorimotor axonal
Lyme arthritis (CMS-HCC)
Rectal bleeding
B12 deficiency
Vitamin D deficiency

Factors (Psychosocial, Contextual, Cultural, Other): Severe

Plan

Mania with psychosis: Continue olanzapine 10 mg BID and depakote 500 mg BID. Depakote initiated on 3/10. Lorazepam 1 mg TID PRN agitation/anxiety. Continue to hold home fluoxetine, Adderall, clonazepam, and lamotrigine.
3/14: Increase olanzapine to 10 mg qAM plus 15 mg at bedtime. Patient may NOT have access to cell phone, bank/credit cards, or computer privileges.
3/16: Increase depakote to 750 mg BID; valproate level 40.5
3/17: Increase olanzapine to 15 mg BID
3/18: Increase depakote to 500 mg BID + 1000 mg nightly; increase olanzapine to 20 mg BID
3/22: Plan for depakote level tomorrow AM prior to morning dose
3/23: Depakote level 68. Increase depakote to 500 BID plus 1500 mg nightly. Begin to consolidate dosing.
3/24: Decrease olanzapine to 10 mg BID. Start haloperidol 10 mg nightly.
3/25: Discontinue olanzapine. Increase haloperidol to 5 mg qAM plus 10 mg nightly.
3/28: Consolidate depakote to 500 mg qAM plus 2000 mg at bedtime given daytime sedation starting tomorrow
3/29: Increase haloperidol to 10 mg BID
3/31: Depakote level plus monitoring labs ordered for tomorrow AM
4/1: Depakote level 111, ALT slightly elevated to 65, AST to 41. Patient asymptomatic. Will reduce depakote to total daily dose of 2250 mg (1000 mg + 1250 mg) given that patient remained symptomatic at 2000 mg daily.

Substance use: Motivational interviewing. Patient minimizes use of substances, including nitrous oxide whippets.
3/28: Patient acknowledges using nitrous oxide leading up to hospitalization and is motivated to address substance use
4/4: Minimizes use but will re-engage with LADC, Gambling addiction an issue as well.

Medical: Routine admission H&P completed. Labs reviewed.
- Lyme arthritis: Patient uses Simponi auto-injector q30 days for treatment of chronic Lyme. Due at beginning of April. Not on formulary here.
- Vitamin B12 deficiency: level decreased since last check in Dec '21. Concern for possible nitrous oxide-induced B12 deficiency. Began IM repletion.
- Rectal bleeding: PT/INR normal. History of same, followed by PCP. Stopped NSAIDs. Will need repeat colonoscopy in future.
3/17: Pt reported worsening of his chronic LE polyneuropathy, likely related to recent B12 repletion. Have started titration of gabapentin with goal of 300 mg TID.
3/21: Primary care to evaluate for ongoing rectal bleeding
3/24: Increase gabapentin to 400 mg TID for polyneuropathy. Increase PRN tylenol to 975 mg q8H PRN.
4/4: Next neurology appointment 7/7, consider scheduling an injection appointment for Simponi when next due. Discussion with patient.

Obtain collateral information from family and outpatient providers.

FOM: OG
Safety: 15 min checks
Legal: involuntary; court-committed NTE 30 days beginning 3/23

Discharge planning: Ongoing pending clinical course.
-Tentative discharge date of Tuesday, 4/5/22
- Mother to transport pt at 1300.
-Psychiatric aftercare at McGeachey

Justification Continued Stay
Justification Continued Stay: Medication related issues, Pt at risk of acute decline , Pt requires 24-hour care and There are current DC barri

ers

Specify Justification Details: Preparing for discharge tomorrow.

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 24
Time of Service: 11:10 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint: "I'm good"

Total Hours of Sleep: 6 (04/03/22 0500)
Appetite: Good (04/02/22 2315)
Hygiene: Shower (03/19/22 1049)

History of Present Illness:
Per overnight nursing notes- Uneventful shift. Pt requested PRN 1mg Ativan @ 0016 hoping it would help calm his nerves and help him sleep-which had good effect. Pt appeared to sleep through the night without waking. Pt remains on 15 minute safety checks 24/7.

This morning Will is seen privately in his room. He states he is feeling well overall. He reports general "aches and pains" but nothing "out of the ordinary". He feels his moods are good, denies thoughts of harming himself or others and denies AVH. He reports looking forward to discharge this week.

Medical Decision Making Level of Risk: Moderate

Assessment

William B Seretta is a 34 y.o. male with prior diagnoses of bipolar 2 disorder, anxiety, and ADHD who presents as an involuntary patient from the MMC ED with symptoms of mania. Symptoms have reportedly been present for several weeks and the patient has recently threatened violence towards family members and police. His parents have found several 100 empty whippit containers in the patient's room, raising concern for a substance-induced component to his presentation. The patient has been adherent with olanzapine and depakote in the emergency department, with some improvement noted, however he remains grandiose, irritable, delusional, and has extremely poor insight.

3/17: Patient showed some improvement in mood yesterday as he appeared calmer and less pressured, however, today he is quite manic and agitated. He could not tolerate interview with the care team and was yelling loudly before terminating the meeting. He has called 911 repeatedly despite redirection from staff. Phone restriction will be put in place.

3/18: Little improvement in manic symptoms at this point. Plan to maximize olanzapine and titrate depakote to TDD of 2000 mg.

3/21: Patient is tolerating increased doses of depakote and olanzapine. Some improvement in mood noted today, although patient remains delusional with extremely poor insight. Weight gain noted and likely attributable to olanzapine. At this time, benefit of this medication outweighs ongoing risk of weight gain.

3/24: Given ongoing delusional/paranoid thinking and significant weight gain (~20lbs) with high dose olanzapine, plan to taper and introduce haloperidol now that depakote is therapeutic.

3/31: Patient presents as euthymic with improvement in delusions. Engaged in successful family meeting discussing transition home. We are establishing aftercare with plan for discharge home next week.

Diagnoses
Principal Problem:
Bipolar 1 disorder (CMS-HCC)
Active Problems:
Polyneuropathy, peripheral sensorimotor axonal
Lyme arthritis (CMS-HCC)
Rectal bleeding
B12 deficiency
Vitamin D deficiency

Factors (Psychosocial, Contextual, Cultural, Other): psychosocial

Plan

Mania with psychosis: Continue olanzapine 10 mg BID and depakote 500 mg BID. Depakote initiated on 3/10. Lorazepam 1 mg TID PRN agitation/anxiety. Continue to hold home fluoxetine, Adderall, clonazepam, and lamotrigine.
3/14: Increase olanzapine to 10 mg qAM plus 15 mg at bedtime. Patient may NOT have access to cell phone, bank/credit cards, or computer privileges.
3/16: Increase depakote to 750 mg BID; valproate level 40.5
3/17: Increase olanzapine to 15 mg BID
3/18: Increase depakote to 500 mg BID + 1000 mg nightly; increase olanzapine to 20 mg BID
3/22: Plan for depakote level tomorrow AM prior to morning dose
3/23: Depakote level 68. Increase depakote to 500 BID plus 1500 mg nightly. Begin to consolidate dosing.
3/24: Decrease olanzapine to 10 mg BID. Start haloperidol 10 mg nightly.
3/25: Discontinue olanzapine. Increase haloperidol to 5 mg qAM plus 10 mg nightly.
3/28: Consolidate depakote to 500 mg qAM plus 2000 mg at bedtime given daytime sedation starting tomorrow
3/29: Increase haloperidol to 10
mg BID
3/31: Depakote level plus monitoring labs ordered for tomorrow AM
4/1: Depakote level 111, ALT slightly elevated to 65, AST to 41. Patient asymptomatic. Will reduce depakote to total daily dose of 2250 mg (1000 mg + 1250 mg) given that patient remained symptomatic at 2000 mg daily.

Substance use: Motivational interviewing. Patient minimizes use of substances, including nitrous oxide whippets.
3/28: Patient acknowledges using nitrous oxide leading up to hospitalization and is motivated to address substance use

Medical: Routine admission H&P completed. Labs reviewed.
- Lyme arthritis: Patient uses Simponi auto-injector q30 days for treatment of chronic Lyme. Due at beginning of April. Not on formulary here.
- Vitamin B12 deficiency: level decreased since last check in Dec '21. Concern for possible nitrous oxide-induced B12 deficiency. Began IM repletion.
- Rectal bleeding: PT/INR normal. History of same, followed by PCP. Stopped NSAIDs. Will need repeat colonoscopy in future.
3/17: Pt reported worsening of his chronic LE polyneuropathy, likely related to recent B12 repletion. Have started titration of gabapentin with goal of 300 mg TID.
3/21: Primary care to evaluate for ongoing rectal bleeding
3/24: Increase gabapentin to 400 mg TID for polyneuropathy. Increase PRN tylenol to 975 mg q8H PRN.

Obtain collateral information from family and outpatient providers.

FOM: OG

Safety: 15 min checks

Legal: involuntary; court-committed NTE 30 days beginning 3/23

Discharge planning: Ongoing pending clinical course. Tentative discharge date of Tuesday, 4/5/22

Justification Continued Stay
Justification Continued Stay: Medication related issues, Pt at risk of acute decline and There are current DC barriers
Specify Justification Details: slowly resolving mania, needs ongoing treatment and medication adjustment, arranging aftercare

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 22
Time of Service: 1:22 PM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"I'm a little tired"

Total Hours of Sleep: 9 (04/01/22 0400)
Appetite: Good (03/31/22 1942)
Hygiene: Shower (03/19/22 1049)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been pleasant, cooperative, linear/organized in thinking. Has been medication compliant. Vitals stable.

The patient was seen in his room where he was lying in bed. He reports that he's doing ok. He describes feeling tired today due to disruptions in the milieu overnight. We reviewed he family meeting yesterday and he thinks things went quite well. He continues to feel worried about how parents will react to his financial decisions, but otherwise is looking forward to returning home. I reviewed his monitoring labs and minimal AST/ALT elevations. He denies any symptoms related to this. Agree to reduce his depakote dose slightly. Denies other concerns.

Inpatient Psychiatry Progress Note

**PATIE
NT**: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 21
Time of Service: 7:53 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"I'm on board"

Total Hours of Sleep: 7 (03/31/22 0500)
Appetite: Good (03/30/22 1038)
Hygiene: Shower (03/19/22 1049)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been intermittently visible and pleasant. Has been medication compliant. Vitals stable.

The patient was seen in the context of a family meeting with myself, parents, SW, and family navigator. The patient engaged appropriately in the meeting, with discussion predominately around expectations for him to return to his parents' home. He was agreeable to all expectations set forth by parents. He was tearful at times during the meeting. Afterwards, expressed some worry about how parents will handle exploration of his financial accounts and the findings that may come of this. He is open to referral to a new psychiatric provider. Projected discharge of early next week, once aftercare is arranged. Denies other concerns.

Plan

Mania with psychosis: Continue olanzapine 10 mg BID and depakote 500 mg BID. Depakote initiated on 3/10. Lorazepam 1 mg TID PRN agitation/anxiety. Continue to hold home fluoxetine, Adderall, clonazepam, and lamotrigine.
3/14: Increase olanzapine to 10 mg qAM plus 15 mg at bedtime. Patient may NOT have access to cell phone, bank/credit cards, or computer privileges.
3/16: Increase depakote to 750 mg BID; valproate level 40.5
3/17: Increase olanzapine to 15 mg BID
3/18: Increase depakote to 500 mg BID + 1000 mg nightly; increase olanzapine to 20 mg BID
3/22: Plan for depakote level tomorrow AM prior to morning dose
3/23: Depakote level 68. Increase depakote to 500 BID plus 1500 mg nightly. Begin to consolidate dosing.
3/24: Decrease olanzapine to 10 mg BID. Start haloperidol 10 mg nightly.
3/25: Discontinue olanzapine. Increase haloperidol to 5 mg qAM plus 10 mg nightly.
3/28: Consolidate depakote to 500 mg qAM plus
2000 mg at bedtime given daytime sedation starting tomorrow
3/29: Increase haloperidol to 10 mg BID
3/31: Depakote level plus monitoring labs ordered for tomorrow AM

Substance use: Motivational interviewing. Patient minimizes use of substances, including nitrous oxide whippets.
3/28: Patient acknowledges using nitrous oxide leading up to hospitalization and is motivated to address substance use

Medical: Routine admission H&P completed. Labs reviewed.
- Lyme arthritis: Patient uses Simponi auto-injector q30 days for treatment of chronic Lyme. Due at beginning of April. Not on formulary here.
- Vitamin B12 deficiency: level decreased since last check in Dec '21. Concern for possible nitrous oxide-induced B12 deficiency. Began IM repletion.
- Rectal bleeding: PT/INR normal. History of same, followed by PCP. Stopped NSAIDs. Will need repeat colonoscopy in future.
3/17: Pt reported worsening of his chronic LE polyneuropathy, likely related to recent B12 repletion. Have started titration of gabapentin with goal of 300 mg TID.
3/21: Primary care to evaluate for ongoing rectal bleeding

3/24: Increase gabapentin to 400 mg TID for polyneuropathy. Increase PRN tylenol to 975 mg q8H PRN.

Obtain collateral information from family and outpatient providers.

FOM: OG

Safety: 15 min checks

Legal: involuntary; court-committed NTE 30 days beginning 3/23

Discharge planning: Ongoing pending clinical course.

Justification Continued Stay
Justification Continued Stay: Medication related issues, Pt at risk of acute decline , Pt poses risk to self/others, Pt exhibiting unsafe behaviors, Pt exhibiting symptoms , Pt requires 24-hour care and There are current DC barriers
Specify Justification Details: slowly resolving mania, delusional, not reality based in thinking, needs ongoing treatment and medication adjustment

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 20
Time of Service: 8:19 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"I just want to get back to work"

Total Hours of Sleep: 9 (03/30/22 0500)
Appetite: Good (03/29/22 0900)
Hygiene: Shower (03/19/22 1049)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been intermittently visible and pleasant. Has been medication compliant. Vitals stable.

The patient was seen in a consult room in collaboration with social work. He reports some improvement in leg pain, although this continues to be bothersome for him. He remains focused on wanting to return to work, including the new position being offered by a friend of his father's. We discussed the plan for a family meeting with his parents tomorrow morning. He does not think there will be anything unexpected discussed in the meeting, as he feels he and his mother have already discussed everything in their conversations on the phone. He is aware that his substance use will likely be a point of conversation. He continues to acknowledge use of NO leading up to his hospitalization, although denies any concerns with stopping his use moving forward. Denies other concerns.

Medical Decision Making Level of Risk: Moderate

Assessment

William B Seretta is a 34 y.o. male with prior diagnoses of bipolar 2 disorder, anxiety, and ADHD who presents as an involuntary patient from the MMC ED with symptoms of mania. Symptoms have reportedly been present for several weeks and the patient has recently threatened violence towards family members and police. His parents have found several 100 empty whippit containers in the patient's room, raising concern for a substance-induced component to his presentation. The patient has been adherent with olanzapine and depakote in the emergency department, with some improvement noted, however he remains grandiose, irritable, delusional, and has extremely poor insight.

3/17: Patient showed some improvement in mood yesterday as he appeared calmer and less pressured, however, today he is quite manic and agitated. He could not tolerate interview with the care team and was yelling loudly before terminating the meeting. He has called 911 repeatedly despite redirection from staff. Phone restriction will be put in place.

3/18: Little improvement in manic symptoms at this point. Plan to maximize olanzapine and titrate depakote to TDD of 2000 mg.

3/21: Patient is tolerating increased doses of depakote and olanzapine. Some improvement in mood noted today, although patient remains delusional with extremely poor insight. Weight gain noted and likely attributable to olanzapine. At this time, benefit of this medication outweighs ongoing risk of weight gain.

3/24: Given ongoing delusional/paranoid thinking and significant weight gain (~20lbs) with high dose olanzapine, plan to taper and introduce haloperidol now that depakote is therapeutic.

Diagnoses
Principal Problem:
Bipolar 1 disorder (CMS-HCC)
Active Problems:
Polyneuropathy, peripheral sensorimotor axonal
Lyme arthritis (CMS-HCC)
Rectal bleeding
B12 deficiency
Vitamin D deficiency

Factors (Psychosocial, Contextual, Cultural, Other): psychosocial

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 19
Time of Service: 8:18 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"
I might have a new job"

Total Hours of Sleep: 9 (03/29/22 0500)
Appetite: Good (03/28/22 1200)
Hygiene: Shower (03/19/22 1049)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been intermittently visible. Was noted to be upset when speaking with his mother in the evening. Has been medication compliant. Vitals stable.

The patient was seen in a consult room. He reports that he spoke with his mother this morning, who told him about a potential job in IT working for a friend of his father's. He states he needs to discharge soon so he can start this position. He then shares that he continues to have job offers in place from multiple corporations asking him to be an influencer for them. I gently challenged him about this and the jobs he has believed to have had at Apple and Google. He maintains that he received job offers from both companies immediately preceding his hospitalization. He does not demonstrate any insight into the fact that this coincided with him developing symptoms of mania. He reiterates today that he was only hospitalized because his mother facilitated it. I shared my perspective that he most likely would have ended up hospitalized regardless of mother's involvement. Used "agree to disagree" language for Will to move past this. He states he has psychiatrists and psychologists and therapists all agreeing he should leave the hospital. He is able to tolerate hearing that he is not yet ready for discharge. Denies other concerns.

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 18
Time of Service: 7:54 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"I'm doing ok"

Total Hours of Sleep: 8 (03/28/22 0400)
Appetite: Good (03/27/22 0945)
Hygiene: Shower (03/19/22 1049)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been isolative, endorses anxiety 5/10. Received PRN tylenol for leg pain. Has been medication compliant. Vitals stable.

The patient was seen in a consult room in collaboration with social work. He presents as calm and cooperative. Reports he had an uneventful weekend, as he has primarily been sleeping. He shares about his interactions with parents and demonstrates some insight into the challenges of navigating these relationships as an adult child. He is open to scheduling a family meeting later this week now that he has further stabilized. He references wanting to return to work and his income, but does not express any overtly delusional thought content. He states his plan at discharge is to return to living with his parents for some time, while preparing to travel across the country in a trailer that he refurbishes. Today he was able to discuss his substance use for the first time and acknowledges that he was using nitrous oxide in March leading up to his hospitalization. She reports that he was feeling stressed and self-medicates because it provides him a "break" from reality. He acknowledges the deleterious physical and mental effects of ongoing use and reports motivation to actively work on his substance use moving forward. We discussed his daytime sedation and while he states he doesn't mind being sleepy here because he's hoping to pass the time, he's open to consolidation of medication to reduce daytime sedation after discharge. Denies other concerns.

Medical Decision Making Level of Risk: Moderate

Assessment

William B Seretta is a 34 y.o. male with prior diagnoses of bipolar 2 disorder, anxiety, and ADHD who presents as an involuntary patient from the MMC ED with symptoms of mania. Symptoms have reportedly been present for several weeks and the patient has recently threatened violence towards family members and police. His parents have found several 100 empty whippit containers in the patient's room, raising concern for a substance-induced component to his presentation. The patient has been adherent with olanzapine and depakote in the emergency department, with some improvement noted, however he remains grandiose, irritable, delusional, and has extremely poor insight.

3/17: Patient showed some improvement in mood yesterday as he appeared calmer and less pressured, however, today he is quite manic and agitated. He could not tolerate interview with the care team and was yelling loudly before terminating the meeting. He has called 911 repeatedly despite redirection from staff. Phone restriction will be put in place.

3/18: Little improvement in manic symptoms at this point. Plan to maximize olanzapine and titrate depakote to TDD of 2000 mg.

3/21: Patient is tolerating increased doses of depakote and olanzapine. Some improvement in mood noted today, although patient remains delusional with extremely poor insight. Weight gain noted and likely attributable to olanzapine. At this time, benefit of this medication outweighs ongoing risk of weight gain.

3/24: Given ongoing delusional/paranoid thinking and significant weight gain (~20lbs) with high dose olanzapine, plan to taper and introduce haloperidol now that depakote is therapeutic.

Diagnoses
Principal Problem:
Bipolar 1 disorder (CMS-HCC)
Active Problems:
Polyneuropathy, peripheral sensorimotor axonal
Lyme arthritis (CMS-HCC)
Rectal bleeding
B12 deficiency
Vitamin D deficiency

Factors (Psychosocial, Contextual, Cultural, Other): psychosocial

Plan

Mania with psychosis: Continue olanzapine 10 mg BID and depakote 500 mg BID. Depakote initiated on 3/10. Lorazepam 1 mg TID PRN agitation/anxiety. Continue to hold home fluoxetine, Adderall, clonazepam, and lamotrigine.
3/14: Increase olanzapine to 10 mg qAM plus 15 mg at bedtime. Patient may NOT have access to cell phone, bank/credit cards, or computer privileges.
3/16: Increase depakote to 750 mg BID; valproate level 40.5
3/17: Increase olanzapine to 15 mg BID
3/18: Increase depakote to 500 mg BID + 1000 mg nightly; increase olanzapine to 20 mg BID
3/22: Plan for depakote level tomorrow AM prior to morning dose
3/23: Depakote level 68. Increase depakote to 500 BID plus 1500 mg nightly. Begin to consolidate dosing.
3/24: Decrease olanzapine to 10 mg BID. Start haloperidol 10 mg nightly.

3/25: Discontinue olanzapine. Increase haloperidol to 5 mg qAM plus 10 mg nightly.
3/28: Consolidate depakote to 500 mg qAM plus 2000 mg at bedtime given daytime sedation starting tomorrow

Substance use: Motivational interviewing. Patient minimizes use of substances, including nitrous oxide whippets.
3/28: Patient acknowledges using nitrous oxide leading up to hospitalization and is motivated to address substance use

Medical: Routine admission H&P completed. Labs reviewed.
- Lyme arthritis: Patient uses Simponi auto-injector q30 days for treatment of chronic Lyme. Due at beginning of April. Not on formulary here.
- Vitamin B12 deficiency: level decreased since last check in Dec '21. Concern for possible nitrous oxide-induced B12 deficiency. Began IM repletion.
- Rectal bleeding: PT/INR normal. History of same, followed by PCP. Stopped NSAIDs. Will need repeat colonoscopy in future.
3/17: Pt reported worsening of his chronic LE polyneuropathy, likely related to recent B12 repletion. Have started titration of gabapentin with goal of 300 mg TID.
3/21: Primary care to evaluate for ongoing rectal bleeding
3/24: Increase gabapentin to 400 mg TID for polyneuropathy. Increase PRN tylenol to 975 mg q8H PRN.

Obtain collateral information from family and outpa
tient providers.

FOM: IH

Safety: 15 min checks

Legal: involuntary; court-committed NTE 30 days beginning 3/23

Discharge planning: Ongoing pending clinical course.

Justification Continued Stay
Justification Continued Stay: Medication related issues, Pt at risk of acute decline , Pt poses risk to self/others, Pt exhibiting unsafe behaviors, Pt exhibiting symptoms , Pt requires 24-hour care and There are current DC barriers
Specify Justification Details: slowly resolving mania, delusional, not reality based in thinking, needs ongoing treatment and medication adjustment

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 17
Time of Service: 8:06 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"I'm fine, I need to take care of things"

Total Hours of Sleep: 7 (03/27/22 0400)
Appetite: Good (03/26/22 1340)
Hygiene: Shower (03/19/22 1049)

History of Present Illness:
Per overnight nursing report- Pt Is calm, cooperative and med compliant. Pt isolative to room, resting in bed for majority of the shift but up for needs. Pt denies SI, HI, AVH. Pt received PRN nicotine gum. No unsafe behaviors observed. Pt has phone restriction order limiting outgoing phone calls to 4 per day. Pt made 4 outgoing calls this shift. Pt remains on 15 min checks 24/7. Patient slept throughout most of the shift, uneventful overnight.

Today William remains pleasant and cooperative with care, but focused on work and social media. He denies depression or thoughts of harming himself or others, but remains anxious about his sound cloud and music.

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 15
Time of Service: 12:17 PM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"I really need to get back to work"

Total Hours of Sleep: 9 (03/25/22 0400)
Appetite: Good (03/25/22 0858)
Hygiene: Shower (03/19/22 1049)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been adherent to phone restriction plan. He is visible in the milieu. Medication adherent. Vitals stable.

The patient was seen in a consult room in collaboration with social work. He focuses today on his need to return to work and use his cell phone to access sound cloud and other social media sites. He states that he has been asked to be "the face" of many major companies and is being offered thousands of dollars worth of product for free. He believes he only needs to pay for shipping and they will deliver him merchandise. He would like to transfer to MMC so he can use his device to access social media. I reiterated that he has a commitment here and will not be transferred. He tolerated this well. He is bright and polite. Does not express concerns about pain or physical complaints. Denies other concerns.

Hospital Day: 14
Time of Service: 8:21 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"Now we're on the same team"

Total Hours of Sleep: 8 (03/24/22 0500)
Appetite: Good (03/23/22 1300)
Hygiene: Shower (03/19/22 1049)

**H
istory of Present Illness:** Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been more cooperative, calm, and polite. Medication adherent. Vitals stable.

The patient was seen in a consult room in collaboration with social work. He reports that his leg pain is significant. We discussed increasing his gabapentin dose and also his PRN tylenol, which he agreed to. I also discussed cross-tapering olanzapine to haloperidol given notable weight gain with olanzapine and hope for improved efficacy with haloperidol. Will consented to this change. He states he's in agreement with any changes and wants to work together fully. We explained the plan to open up his phone use to allow for 4 outgoing calls per day at the nursing station. He was thankful for this. Denies other concerns.

Medical Decision Making Level of Risk: Moderate

Assessment

William B Seretta is a 34 y.o. male with prior diagnoses of bipolar 2 disorder, anxiety, and ADHD who presents as an involuntary patient from the MMC ED with symptoms of mania. Symptoms have reportedly been present for several weeks and the patient has recently threatened violence towards family members and police. His parents have found several 100 empty whippit containers in the patient's room, raising concern for a substance-induced component to his presentation. The patient has been adherent with olanzapine and depakote in the emergency department, with some improvement noted, however he remains grandiose, irritable, delusional, and has extremely poor insight.

3/17: Patient showed some improvement in mood yesterday as he appeared calmer and less pressured, however, today he is quite manic and agitated. He could not tolerate interview with the care team and was yelling loudly before terminating the meeting. He has called 911 repeatedly despite redirection from staff. Phone restriction will be put in place.

3/18: Little improvement in manic symptoms at this point. Plan to maximize olanzapine and titrate depakote to TDD of 2000 mg.

3/21: Patient is tolerating increased doses of depakote and olanzapine. Some improvement in mood noted today, although patient remains delusional with extremely poor insight. Weight gain noted and likely attributable to olanzapine. At this time, benefit of this medication outweighs ongoing risk of weight gain.

3/24: Given ongoing delusional/paranoid thinking and significant weight gain (~20lbs) with high dose olanzapine, plan to taper and introduce haloperidol now that depakote is therapeutic.

Diagnoses
Principal Problem:
Bipolar 1 disorder (CMS-HCC)
Active Problems:
Polyneuropathy, peripheral sensorimotor axonal
Lyme arthritis (CMS-HCC)
Rectal bleeding
B12 deficiency
Vitamin D deficiency

Factors (Psychosocial, Contextual, Cultural, Other): psychosocial

Plan

Mania with psychosis: Continue olanzapine 10 mg BID and depakote 500 mg BID. Depakote initiated on 3/10. Lorazepam 1 mg TID PRN agitation/anxiety. Continue to hold home fluoxetine, Adderall, clonazepam, and lamotrigine.
3/14: Increase olanzapine to 10 mg qAM plus 15 mg at bedtime. Patient may NOT have access to cell phone, bank/credit cards, or computer privileges.
3/16: Increase depakote to 750 mg BID; valproate level 40.5
3/17: Increase olanzapine to 15 mg BID
3/18: Increase depakote to 500 mg BID + 1000 mg nightly; increase olanzapine to 20 mg BID
3/22: Plan for depakote level tomorrow AM prior to morning dose
3/23: Depakote level 68. Increase depakote to 500 BID plus 1500 mg nightly. Begin to consolidate dosing.
3/24: Decrease olanzapine to 10 mg BID. Start haloperidol 10 mg nightly.

Substance use: Motivational interviewing. Patient minimizes use of substances, including nitrous oxide whippets.

Medical: Routine admission H&P completed. Labs reviewed.
- Lyme arthritis: Patient uses Simponi auto-injector q30 days for treatment of chronic Lyme. Due at beginning of April. Not on formulary here.
- Vitamin B12 deficiency: level decreased since last check in Dec '21. Concern for possible nitrous oxide-induced B12 deficiency. Began IM repletion.
- Rectal bleeding: PT/INR normal. History of same, followed by PCP. Stopped NSAIDs. Will need repeat colonoscopy in future.
3/17: Pt reported worsening of his chronic LE polyneuropathy, likely related t
o recent B12 repletion. Have started titration of gabapentin with goal of 300 mg TID.
3/21: Primary care to evaluate for ongoing rectal bleeding
3/24: Increase gabapentin to 400 mg TID for polyneuropathy. Increase PRN tylenol to 975 mg q8H PRN.

Obtain collateral information from family and outpatient providers.

FOM: IH

Safety: 15 min checks

Legal: involuntary; court-committed NTE 30 days beginning 3/23

Discharge planning: Ongoing pending clinical course.

Justification Continued Stay
Justification Continued Stay: Medication related issues, Pt at risk of acute decline , Pt poses risk to self/others, Pt exhibiting unsafe behaviors, Pt exhibiting symptoms , Pt requires 24-hour care and There are current DC barriers
Specify Justification Details: slowly resolving mania, delusional, not reality based in thinking, needs ongoing treatment and medication adjustment

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 13
Time of Service: 8:18 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"I plan on leaving today"

Total Hours of Sleep: 7 (03/23/22 0500)
Appetite: Good (03/21/22 1900)
Hygiene: Shower (03/19/22 1049)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been more cooperative, calm, and polite. He met with the court appointed attorney in the evening. Medication adherent. Vitals stable.

The patient was seen in a consult room in collaboration with social work. He states he plans on leaving today after he is made voluntary by the judge in his court hearing. He would like to go to Maine Medical Center to obtain medical treatment. He states that he faked his symptoms of mania last week to test to the team. Shares frustrations about inconsistencies in care compared to other patients here. He does not recall that he declined to sign an ROI for Dr. Abernathy previously this admission and agrees to sign one today. We discussed the court process and I answered questions about what to expect. Denies other concerns.

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 12
Time of Service: 9:19 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"I have an appointment at MMC today"

Total Hours of Sleep: 9 (03/22/22 0500)
Appetite: Good (03/21/22 1900)
Hygiene: Shower (03/19/22 1049)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been pressured, grandiose. He endorses moderate anxiety. Medication adherent. Vitals stable.

The patient was seen in a consult room in collaboration with social work. The patient states today that he is unwell medically and woke up drenched in sweat in the middle of the night. I reassured him that primary care is aware and will be meeting with him today. Will remains fixated on needing to leave the hospital to attend appointments, today at MMC. We discussed the details of the involuntary commitment hearing that will occur tomorrow. He denies questions about this process. He is not sure if he met with the independent examiner or not. He tells us today that he was pretending to be manic in recent days to see how everyone would respond and to create a comparison so that now he seems calm and back to himself. He perseverates on needing to use his cell phone to log into Sound Cloud. Is overall polite and cooperative. Denies other concerns.

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 11
Time of Service: 8:17 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"Well, you were right"

Total Hours of Sleep: 8 (03/21/22 0500)
Appetite: Good (03/20/22 1900)
Hygiene: Shower (03/19/22 1049)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been less pressured, but remains grandiose in his thinking. Medication adherent. Vitals stable.

The patient was seen in a consult room in collaboration with social work. He presents as calmer today compared to prior. He begins by stating that we were right and that he was manic on Friday and over the weekend. He asserts that the mania resolved yesterday and he is back to his normal self today. He shares that he had an appointment with his PCP scheduled this afternoon, but his mother cancelled it. He states he is
passing a large amount of blood in his stool and needs to attend the appointment. I reassured him that we would have our medical provider see him here. He describes frustration with his mother and ongoing belief that she committed a crime by bringing him to the emergency department. He states that he is pursuing legal charges against her, but then states he is the one going to jail for 6 months. He returns to the issue of needing his phone to maintain employment at Sound Cloud. He then states that he is a Day Trader on Wall Street and is losing thousands of dollars per day here. He was more tolerant today when I explained that he would not be discharged yet. He shares that he has gained 20 pounds since arriving in the ED and is hungry all the time.

**
Case discussed and reviewed with nursing.
Outpatient Provider notified: Patient declines to sign ROI for Dr. Abernathy. She was contacted in the ED and is aware of patient's hospitalization. Will continue to address with patient as he improves.
Labs: Reviewed and remarkable for : valproate level 40.5

Medical Decision Making Level of Risk: Moderate

Assessment

William B Seretta is a 34 y.o. male with prior diagnoses of bipolar 2 disorder, anxiety, and ADHD who presents as an involuntary patient from the MMC ED with symptoms of mania. Symptoms have reportedly been present for several weeks and the patient has recently threatened violence towards family members and police. His parents have found several 100 empty whippit containers in the patient's room, raising concern for a substance-induced component to his presentation. The patient has been adherent with olanzapine and depakote in the emergency department, with some improvement noted, however he remains grandiose, irritable, delusional, and has extremely poor insight.

3/17: Patient showed some improvement in mood yesterday as he appeared calmer and less pressured, however, today he is quite manic and agitated. He could not tolerate interview with the care team and was yelling loudly before terminating the meeting. He has called 911 repeatedly despite redirection from staff. Phone restriction will be put in place.

3/18: Little improvement in manic symptoms at this point. Plan to maximize olanzapine and titrate depakote to TDD of 2000 mg.

3/21: Patient is tolerating increased doses of depakote and olanzapine. Some improvement in mood noted today, although patient remains delusional with extremely poor insight. Weight gain noted and likely attributable to olanzapine. At this time, benefit of this medication outweighs ongoing risk of weight gain.

Diagnoses
Principal Problem:
Bipolar 1 disorder (CMS-HCC)
Active Problems:
Polyneuropathy, peripheral sensorimotor axonal
Lyme arthritis (CMS-HCC)
Rectal bleeding
B12 deficiency

Factors (Psychosocial, Contextual, Cultural, Other): psychosocial

Plan

Mania with psychosis: Continue olanzapine 10 mg BID and depakote 500 mg BID. Depakote initiated on 3/10. Lorazepam 1 mg TID PRN agitation/anxiety. Continue to hold home fluoxetine, Adderall, clonazepam, and lamotrigine.
3/14: Increase olanzapine to 10 mg qAM plus 15 mg at bedtime. Patient may NOT have access to cell phone, bank/credit cards, or computer privileges.
3/16: Increase depakote to 750 mg BID; valproate level 40.5
3/17: Increase olanzapine to 15 mg BID
3/18: Increase depakote to 500 mg BID + 1000 mg nightly; increase olanzapine to 20 mg BID

Substance use: Motivational interviewing. Patient minimizes use of substances, including nitrous oxide whippets.

Medical: Routine admission H&P completed. Labs reviewed.
- Lyme arthritis: Patient uses Simponi auto-injector q30 days for treatment of chronic Lyme. Due at beginning of April. Not on formulary here.
- Vitamin B12 deficiency: level decreased since last check in Dec '21. Concern for possible nitrous oxide-induced B12 deficiency. Began IM repletion.
- Rectal bleeding: PT/INR normal. History of same, followed by PCP. Stopped NSAIDs. Will need repeat colonoscopy in future.
3/17: Pt reported worsening of his chronic LE polyneuropathy, likely related to recent B12 repletion. Have started titration of gabapentin with goal of 300 mg TID.
3/21: Primary care to evaluate for ongoing rectal bleeding

Obtain collateral information from family and outpatient providers.

FOM: UR

Safety: 15 min checks

Legal: involuntary; white paper w/treatment filed 3/14. Court hearing scheduled for 3/23

Discharge planning: Ongoing pending clinical course.

Justification Continued Stay
Justification Continued Stay: Medication related issues, Pt at risk of acute decline , Pt poses risk to self/others, Pt exhibiting uns afe behaviors, Pt exhibiting symptoms , Pt requires 24-hour care and There are current DC barriers
Specify Justification Details: acutely manic, delusional, not reality based in thinking, needs ongoing treatment and medication

adjustment

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 8
Time of Service: 7:58 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:

"I desperately need to speak with you"

Total Hours of Sleep: 7 (03/18/22 0500)
Appetite: Good (03/17/22 1734)
Hygiene: (not recorded)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has been irritable, pressured, and grandiose. Phone restriction put into place yesterday afternoon after patient made numerous calls to police and 911. He has been medication compliant. Vitals stable.

Today, William was seen in the consult room in collaboration with social work. He began the meeting by apologizing for his behavior yesterday. He then became more escalated as he perseverated on the injustices he perceives have been made against him here. He does acknowledge that he is "getting manic." Demands that certain staff be reprimanded or fired by myself. Shares that he is writing a story for the newspaper about the abuse he has suffered here and that he has friends at the NY Times, Wall Street Journal, Portland Press Herald, and Bangor Daily News that he will submit it to. We encouraged him to continue to reach out to disability rights and John Crimmins regarding patient rights. I asked if we can find a way to work together to address his symptoms and needs. He stated he needs to be discharged or have time on his cell phone each day and if he is able to do those things he will stay for a year. Our meeting was interrupted, as patient received a call that he requested to take.

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 7
Time of Service: 8:09 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:

"I just need to get out of here"

Total Hours of Sleep: 8 (03/17/22 0500)
Appetite: Good (03/16/22 2035)
Hygiene: (not recorded)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient presents as superficially linear and organized, but remains pressured and grandiose. He is discharged focused. He has been medication compliant. Vitals stable.

Today, William was seen in the consult room in collaboration with social work. I was notified by nursing that he has been agitated, pressured, and irritable. He has been making calls to his PCP, family, lawyers, and several times to 911 declaring a medical emergency. In our meeting, he is pressured, angry, and difficult to redirect. He states he is "done" with being in the hospital and demands that I discharge him. He states he will call the police to escort him out. I attempted to explain several times the involuntary process, role for court next week, services available to him here such as disability rights/patient rights advocate, however, the patient interrupts and is not amenable to redirection. He denies any psychiatric symptoms, stating he is not manic. At one point, he yells loudly in a threatening manner. He terminates the interview when it becomes clear that he will not be discharged today.

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 6
Time of Service: 1:52 PM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:

"I'm feeling rested"

Total Hours of Sleep: 7 (03/16/22 0500)
Appetite: Good (03/16/22 1200)
Hygiene: (not recorded)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has presented with an irritable edge, pressured, and grandiose. He has been medication compliant. Vitals stable.

Today, William was seen in the consult room in collaboration with social work and SW trainee. He states that he feels more rested today. He is calmer and more easily engaged in conversation today. He maintains that he is not manic and that people said he needed to be hospitalized because he has been doing so well recently. He identifies beginning work with his recovery coach as the time when he started to feel well and more motivated. He reiterates his belief that he was offered jobs at Apple, Google, and Soundcloud due to the success of his music that he posted on Soundcloud. He again states that if he doesn't log on to Soundcloud and repost other peoples' music he will lose his job. I offered to sit with the patient and try to log on to Soundcloud, as he feels doing so will allow him to focus on his treatment and work with the team here more effectively. When we attempted to access the website, it was blocked by MaineHealth. The patient tolerated this well and acknowledged the team's effort to work with him. We discussed his depakote level and he consented to increasing the dose. Denies other concerns.

Medical Decision Making Level of Risk: Moderate

Assessment

William B Seretta is a 34 y.o. male with prior diagnoses of bipolar 2 disorder, anxiety, and ADHD who presents as an involuntary patient from the MMC ED with symptoms of mania. Symptoms have reportedly been present for several weeks and the patient has recently threatened violence towards family members and police. His parents have found several 100 empty whippit containers in the patient's room, raising concern for a substance-induced component to his presentation. The patient has been adherent with olanzapine and depakote in the emergency department, with some improvement noted, however he remains grandiose, irritable, delusional, and has extremely poor insight.

Diagnoses
Principal Problem:
Bipolar 1 disorder (CMS-HCC)
Active Problems:
Polyneuropathy, peripheral sensorimotor axonal
Lyme arthritis (CMS-HCC)
Rectal bleeding
B12 deficiency

Factors (Psychosocial, Contextual, Cultural, Other): psychosocial

Plan

Mania with psychosis: Continue olanzapine 10 mg BID and depakote 500 mg BID. Depakote initiated on 3/10. Lorazepam 1 mg TID PRN agitation/anxiety. Continue to hold home fluoxetine, Adderall, clonazepam, and lamotrigine.
3/14: Increase olanzapine to 10 mg qAM plus 15 mg at bedtime. Patient may NOT have access to cell phone, bank/credit cards, or computer privileges.
3/16: Increase depakote to 750 mg BID; valproate level 40.5

Substance use: Motivat
ional interviewing.

Medical: Routine admission H&P completed. Labs reviewed.

- Lyme arthritis: Patient uses Simponi auto-injector q30 days for treatment of chronic Lyme. Due at beginning of April. Not on formulary here.
- Vitamin B12 deficiency: level decreased since last check in Dec '21. Concern for possible nitrous oxide-induced B12 deficiency. Began IM repletion.
- Rectal bleeding: PT/INR normal. History of same, followed by PCP. Stopped NSAIDs. Will need repeat colonoscopy in future.

Obtain collateral information from family and outpatient providers.

FOM: UR

Safety: 15 min checks

Legal: involuntary; white paper w/treatment filed 3/14

Discharge planning: Ongoing pending clinical course.

Justification Continued Stay
Justification Continued Stay: Medication related issues, Pt at risk of acute decline , Pt poses risk to self/others, Pt exhibiting unsafe behaviors, Pt exhibiting symptoms , Pt requires 24-hour care and There are current DC barriers
Specify Justification Details: acutely manic, delusional, not reality based in thinking, needs ongoing treatment and medication adjustment

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 5
Time of Service: 8:14 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:

"I'm really not manic"

Total Hours of Sleep: 8 (03/14/22 0500)
Appetite: Good (03/14/22 2000)
Hygiene: (not recorded)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has visible for needs, perseverative, pressured in speech. He has been medication compliant. Vitals stable.

Today, William was seen in his room. He is extremely polite and gracious when I enter the room. He quickly becomes more pressured and irritable as he discusses in detail the legal action he is going to take against the hospital and myself for his ongoing involuntary hold. He states that he has already successfully sued Maine Medical Center. He says that that if I would just let him leave he would come right back as a voluntary patient. I asked him why he would do this and he explained that he needs to come back for treatment and help. I pointed out that he had he is here now and receiving treatment. He did not agree that he is manic and when I tried to explain some of the symptoms that have been observed, he refuted each one. He states that if we call his friends (he has a full page list of friends' names and phone numbers on his desk) they will tell us that this is how he normally behaves. He is appreciative of the primary care team meeting with him yesterday and initiating B12 supplementation. He does thank me for my time meeting with him. Denies other concerns.

Inpatient Psychiatry Progress Note

PATIENT: William B Seretta
ADMIT DATE:3/11/2022

Hospital Day: 4
Time of Service: 8:23 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:

"Oh good thank you for meeting with me"

Total Hours of Sleep: 8 (03/14/22 0500)
Appetite: Good (03/13/22 1731)
Hygiene: (not recorded)

History of Present Illness: Patient discussed in interdisciplinary team rounds. Per nursing report, the patient has presented with rapid speech, grandiosity, and paranoia. He makes delusional statements about working as a top representative of Google. He was noted to be wandering into another patient's room over the weekend, but was redirectable. He has been medication compliant. Vitals stable.

Today William was seen in a consult room in collaboration with social work. He presents as pressured, grandiose, and irritable at times, however, can be polite. He states that he might be acting manic, but he's not actually manic. He is aware that people have reacted negatively to his pressured and irritable tone of voice, but says several times that he's not trying to threaten us or anyone here. He again states that his mother tricked him to coming to the emergency department and he was treated horribly at Maine Med. He states it has been "a little better" here, but he is frustrated about not having access to his phone or the computer. He states that he lost thousands of dollars while in the ED and is at risk of losing thousands more. He shares that he made a wire transfer over the phone this morning between two financial companies. He pleads with us to allow him to use his phone, which I declined and explained my reasoning regarding the risk of him making poor/risky decisions in the setting of an active manic episode. He stated that he has been in contact with several lawyers and will be out of here soon. I explained that he remains involuntary and he will receive the paperwork for his commitment hearing, which I would be happy to discuss with him in more detail. He was provided numbers for the SHH patient rights advocate and Disability Rights Maine. He agreed to meet with our employment specialist. He reported blood in his stool and I have placed a primary care consult. The patient expressed frustration that he cannot leave here to attend an appointment at his PCP's office.

ADMIT DATE:3/11/2022

Hospital Day: 2
Time of Service: 11:55 AM

Reason for Admission: Bipolar 1 disorder (CMS-HCC) [F31.9]

Chief Complaint:
"I'm going to lose my job"

Total Hours of Sleep: 8 (03/12/22 0500)
Appetite: Good (03/12/22 1100)
Hygiene: (not recorded)

History of Present Illness: Today William is seen privately in his room. He states he really needs to get on the computer today because if he doesn't check in on Soundcloud he will lose his job. He states it is his last of three jobs, having lost his other two. He tells me that he spoke with his mother this morning and he tells me we will be getting a call from her taking back everything she said that led to his involuntary hospitalization. He states he is motivated to do well, to prove to everyone he can succeed. He states his success makes those in his life uncomfortable- "they blame it on mania, when really its just me succeeding"

Admission Diagnosis: Bipolar 1 disorder (CMS-HCC) [F31.9]

History of Present Illness:

William B Seretta is a 34 y.o. male with history of bipolar 2, anxiety, and ADHD who presents from MMC ED where he self presented at the urging of his parents. The patient has had several weeks of increasingly manic behavior. This has included grandiose statements, reckless spending, aggressive behavior in the community leading to police involvement during an altercation with his father. He believes he has lucrative business potential, believing he has millions of dollars to invest. Reports from family also indicate a large amount of cannabis and nitrous oxide, with 100's of empty whippets found. He made statements to family that he would attack with a knife if the police or EMS was called on him. The patient himself expresses concern that there is something wrong with his parents.

While in the ED, the patient was inititaed on a psychiatric emergency because of threatening statements and agitated behavior. He was treated with IM droperidol. He has been observed to remain in an agitated manic state since his arrival on 3/7. He was started on olanzapine 10 mg twice a day, with the addition of Depakote 500 mg twice daily yesterday evening. He has been compliant with oral medications.

I met with the patient today for initial interview in a consult room. He presents as expansive with an irritable edge. He states he is very happy to be here and out of the emergency department. He reports that he is here because his mother "tricked" him into going to emergency department. He is not sure why people were concerned about him or wanted an evaluation. He states he was kept in the emergency department without adequate food or ability to use his phone. He explains that he must have his phone so he can complete a transaction on the financial app Robin Hood. He states that if he is not able to do this he will lose thousands of dollars and his job at Sound Cloud. He tells me that he put some of his own music on sound cloud and it got millions of listens and he was offered a job. He also says he had jobs at google an apple although lost these while he was in the emergency department. I explained that he will not be able to use his phone or the computer. He responded by saying that he would then walk out the door. I explained his involuntary status. He asked me if I would complete the transaction on his phone if he gave me instructions. I declined to do this. He became somewhat irritable, although maintained behavioral control. He stated he could not talk to me any longer until he figured this out and said he would call his mother and asked her to make the transaction on his behalf. He then left to complete this and terminated our interview.

Social History
Access to Weapons/means of self harm: no
Protective Factors for suicide risk: Family Support, Outpatient Providers, Stable Housing
Military History: none
History of Abuse : none
Other High Risk Issues: none
Legal Problems : none** **
Individual(s) or group(s) that serve as major supports: Family, Outpatient Providers
Additional information:

Per ED eval: "Was apparently highly successful in high school and went to college in Utah. There, he relapsed into substance use and had significant issues with emergent mental illness. He has been living with his parents for the past 10 years. He is currently unemployed. No current legal issues."

Patient Strengths and Deficits:

Patient Strengths:** **Family Support, Stable Housing, Future Plans
Patient Deficits: substance use

Objective
Vital Signs : BP 132/90 (Patient Position: Sitting) | Pulse 71 | Temp 36.7 °C (98 °F) (Oral) | Resp 16 | Ht 1.854 m (6' 1") | Wt 93 kg (205 lb) | SpO2 100% | BMI 27.05 kg/m^2

Mental Status Exam

General Appearance and Manner: Clean and well groomed, Clothing appropriate and Good eye contact
Motor: Normal muscle streng
th and tone
Gait and Station: Regular
Speech: Pressured
Language: Descriptive
Thought Process: Perseverative
Associations: Loose
Thought Content: Delusions, Denies SI, Denies HI and Denies violent thoughts
Mood: Irritable
Affect: Angry/Irritable
Attention/Concentration: Sig difficulties w/focus
Fund of Knowledge: Intact
Intellectual Functioning: Average as evidenced by: Fund of General Knowledge
Memory: Within normal limits
Recall Objects Immediately: did not complete, interview terminated by patient
Recall Objects after 5 min: did not complete, interview terminated by patient
Orientation: Fully oriented
Insight: Impaired based on the patient's ability to state reason for admission, to identify problems, to state cause of problems, to identify one's role in problems and to identify means to feel better
Judgement: Impaired as evidenced by the patient's response to this question: What would you do if Other events leading to hospitalization

Assessment

William B Seretta is a 34 y.o. male with prior diagnoses of bipolar 2 disorder, anxiety, and ADHD who presents as an involuntary patient from the MMC ED with symptoms of mania. Symptoms have reportedly been present for several weeks and the patient has recently threatened violence towards family members and police. His parents have found several 100 empty whippit containers in the patient's room, raising concern for a substance-induced component to his presentation. The patient has been adherent with olanzapine and depakote in the emergency department, with some improvement noted, however he remains grandiose, irritable, delusional, and has extremely poor insight.

Clinical Impressions
Primary Diagnosis : Bipolar 1 disorder, currently manic with psychotic features

Secondary Diagnosis :
Inhalant use disorder, severe
Cannabis use disorder, severe
Unspecified anxiety disorder
ADHD, by history

Admission Diagnoses:
Principal Problem:
Bipolar 1 disorder (CMS-HCC)

Factors (Psychosocial, Contextual, Cultural, Other): psychosocial

Functional Assessment: GAF 20

Plan

Mania with psychosis: Continue olanzapine 10 mg BID and depakote 500 mg BID. Depakote initiated on 3/10. Lorazepam 1 mg TID PRN agitation/anxiety. Continue to hold home fluoxetine, Adderall, clonazepam, and lamotrigine.

Substance use: Motivational interviewing.

Medical: A routine history and physical will be performed in the next 24 hours. Labs were ordered. Patient uses Simponi auto-injector q30 days for treatment of chronic Lyme. Last used ~10 days ago. Not on formulary here. Will discuss with family and primary care.

Obtain collateral information from family and outpatient providers.

FOM: UR

Safety: 15 min checks

Legal: involuntary blue paper

Discharge planning: Ongoing pending clinical course.

I have reviewed the Columbia Suicide Severity Rating Scale. The patient's current suicide risk is Low.

The observation level and freedom of movement based on this current suicide risk assessment and my clinical evaluation will be 15" Unit Restricted

Clinical rationale for assignment of risk level, observation level, and freedom of movement is as follows: denies SI, intent, or plan. No HI. Safe in the context of hospitalization

Med Reconciliation Completed: Yes

I certify the medical necessity of hospitalization for either a) treatment which could reasonably be expected to improve the patient's condition, or b) diagnostic study; and that hospital records indicate that the services furnished are either intensive treatment services, admission and related services necessary for diagnostic study, or equivalent services.

Consult Notes - documented in this encounter

Julia H - 04/05/2022 9:48 AM EDT
Summary: SW - Discharge Note

Formatting of this note might be different from the original.
SW met with patient to review readiness, ROI's and AVS. Patient asserts stable mood, linear thought, no SI and denies any perceptual disturbances. He is motivated for discharge with return home with OP supports in place. Safety plan developed and reviewed. Patient agreeable to post discharge call tomorrow and will reach out as needed

Electronically signed by Julia H at 04/05/2022 9:54 AM EDT

Julia H - 04/05/2022 9:47 AM EDT
Summary: SW - Phone meeting

Formatting of this note might be different from the original.
SW set patient up in consult room with phone for arranged phone call by parents to CPA, Peter Hall.

Electronically signed by Julia H at 04/05/2022 9:48 AM EDT

Julia H - 04/04/2022 11:30 AM EDT
Summary: SW - Famiy Contact Lynn 233 2226

Formatting of this note might be different from the original.
SW spoke with mother in review of discharge plan, pick up time of 1pm tomorrow, and overview of AVS, family meeting, and expectations She is supportive of plan - will leave phone number for CPA on SW phone so patient may call tomorrow at 10 per patient and family interest.

Electronically signed by Julia H at 04/04/2022 11:36 AM EDT

Julia H - 04/04/2022 11:24 AM EDT
Summary: SW - TC Sarah Siegal LADC 520 4908

Formatting of this note might be different from the original.
Therapist called and relayed having spoken with patient who noted motivation to work on substance use - she can see him next Monday 4/11 at 2:00 pm - she lacks fax with discharge summary and plan to be mailed to Good Medicine Collective 231 York Street, Portland ME

Electronically signed by Julia H at 04/04/2022 11:30 AM EDT

Julia H - 04/04/2022 11:20 AM EDT
Summary: SW - LADC Sarah Siegal 520 4908

Formatting of this note might be different from the original.
SW received call from LADC - Review of progress and continued needs held - plan for her to speak with him directly to review motivation to address substance use. SW to share contact number with patient and have him call her at 11am. She will call SW following phone call with outcome

SW spoke with patient and provided phone, contact number to call Sarah.
Patient willing and motivated

Formatting of this note might be different from the original.
Sw left message with mother, Lynn, towards scheduling family meeting either Thursday or Friday am. Awaiting call back to confirm and review progress

Electronically signed by Julia H at 03/28/2022 1:07 PM EDT

Julia H - 03/28/2022 11:38 AM EDT
Summary: SW - Contact Note

Formatting of this note might be different from the original.
SW met with patient accompanied by Dr. Powers for twenty five minutes in consult room. Focus was review of progress and further treatment and discharge planning. Patient reflected on improved mood and benefits of current medication regime. Largely sleeping over week end due to fatigue and physical pain. Thoughts more reality based and goal directed. Open to family meeting towards discharge planning and support needs. Interest in returning home pending purchase of trailer and travel. Motivated to return to recovery coach and Dr. Abernathy in follow up Topic of substance use approached with patient acknowledging use, risks and goal for sobriety. Patient is encouraged to engage in groups towards beginning daily routine in preparation for discharge - concern at monopolizing conversations. Means to set boundaries and seek feedback from others offered with encouragement in attendance. \

SW to reach out to family in setting up family meeting and will continue to support patient treatment and discharge goals

Julia H - 03/25/2022 10:58 AM EDT
Summary: SW - Contact Note

Formatting of this note might be different from the original.
SW met with patient accompanied by Dr Powers to review treatment goals and discharge needs . Patient demonstrates gradual improvement as less irritable, more calm and cooperative. Continues to assert he is at baseline with no room for improvement or need for further care. Focus largely on need to return to work in role as hired influencer who purchases brand inventories with return profits Relays efforts to have mother unsuccessfully access social media and instead resorting to giving his friends his credit card number over phone to perform duty. Interest in discharging to MMC where has access to care and use of phone. Declines return to parents with plan to purchase trailer and travel trailer and travel country. Declines interest in moving to any family meeting prior to discharge. Patient has remained in boundaries of phone plan and been in good behavioral control on unit Less focus on medical and physical needs and more on social media, work in this contact. Team notes belief he can further benefit from care, medication changes and encouraged engagement in care. Has not yet attended groups as concern wou
ld overtake them and/or want to be teacher. SW to continue to support needs and relayed would outreach to mother

Summary: FN FAMILY CONTACT

Formatting of this note might be different from the original.
LATE ENTRY on 3/23/22 Lyn Baird, Pt's mother.
Writer met with mother in the lobby as she was delivering the medication for the Pt that needs refrigeration per plan. Writer spoke with mother about what the physician reported about court and informed her the Pt may be more upset with her as a result. Writer explained not knowing the final determination but they are expecting up to 30 days and explained what that means. Mother talked about discharge planning when the Pt is more able to address it. Mother said she and father will begin to work on clarifying their requirements that are somewhat dependent on Pt's wellness.

Mother picked up her copy of the physicians report for rep payee. Writer explained having called the city of Portland payee dept for guidance on parents filing for rep payee. Mother thanked the SHH team for caring for the Pt and supporting the family. Plan is to continue to support family and deliver the medication to pharmacy.

Writer immediately delivered the medication to pharmacy.

Electronically signed by Elizabeth, LCSW at 03/24/2022 9:15 AM EDT

Julia H - 03/23/2022 12:20 PM EDT
Summary: SW - Contact Note

Formatting of this note might be different from the original.
SW met with patient accompanied by Dr. Powers in consult room to review treatment and discharge goals as well as preparation for today's court hearing. He noted having met with his court appointed attorney last evening. Patient continues to evidence mania marked by lack of insight and impairments in judgement. He denies any SI or HI. Outlook continues to be discharge focused with need for medical care. Denies any psychiatric symptoms, asserts mood at baseline and having faked mania last week as a test to treatment team. Denies any benefit to care. Shared many examples where needs not being met. Asks team help him in getting mother committed to hospital for mental health needs. He is hopeful will be made voluntary where will then go to MMC. If not, plan to increase behaviors of what would look like if he had mania to team. Team offered support, review and information related to court process. Patient plan to attend and make statement.

Elizabeth, LCSW - 03/23/2022 8:17 AM EDT
Summary: FN FAMILY CONTACT

Formatting of this note might be different from the original.
Lyn Baird 233-2226, Pt's mother.
Writer called mother; no answer, no VM.

Mother called me assuming it might have been me calling as well as the Pt's SW. Writer explained sending the physicians report for rep payee to SS, going out in the SHH mail today.

Mother reported the Pt is convinced he will be D/C'd today after court, and told her to be ready to come and pick him up. Writer explained SHH typically doesn't take people to court unless there is good reason and in my experience, it has been rare the court chooses to let a person go. Mother said the Pt said he was up a lot last night thinking about what he did wrong to end up in the hospital so it will be a dreadful day for him today. Mother stated the Pt is too smart for his own good sometimes, he can be clever and work situations, it's not working this time for him.

Mother said she plans to drop the medication off today and will pick up the copy of the physicians report for SS rep payee. Plan is for writer to coordinate the medication drop off and letter pick up with the team and the front desk. Writer will look into further inf ormation for mother applying to be the rep payee. Mother thanked writer for the supports.

Formatting of this note might be different from the original.
Maine Behavioral Health
Medical Progress Note

**ID: **William B Seretta is a 34 y.o. male admitted 3/11/2022 for Bipolar 1 disorder (CMS-HCC)

Hospital Day: 13

Date of service: 3/23/2022

Chief Complaint: consult initiated for ongoing rectal bleeding

Also discussed Vitamin D deficiency

[table#1]:

Assessment and Plan

*** Bipolar 1 disorder (CMS-HCC)**
Assessment & Plan
Followed by psychiatry

Vitamin D deficiency
Assessment & Plan
3/17/22 = 14.6

Reviewed with the patient.

RX: elected to use Vitamin D3 5000 international units at bedtime. May require a higher dose in the future.

Encouraged recheck labs in 2 months.

B12 deficiency
Assessment & Plan
Possibly related to nitrous oxide abuse, patient is amenable to parenteral replacement and will give 1000 mcg daily IM for 7 days followed by 1000 mcg weekly. He should have follow-up labs with his primary care provider in 4 to 6 weeks. Not anemic at this time

3/17/22

Neuropathic pain increased with parenteral B12. Patient agrees to try gabapentin and will reappoint with Dr. Kleinman in Neurology.

Rectal bleeding
Assessment & Plan
Patient reports having several years of episodes of rectal bleeding that occur "when I am really stressed, and I am really stressed right now". He underwent colonoscopy for this approximately 3 years ago with Dr.Rolschud at Portland gastroenterology with no significant pathology seen. He does have a history of hemorrhoids in his chart along with the history of rectal bleeding.

He would benefit from repeat colonoscopy and will be referred for same. In the meantime NSAIDs have been stopped and INR/PTT will be checked. Platelets seem adequate

3/23/22: additional Consult regarding this issue. Reinforced GI Follow-up; will facilitate that process.

Lyme arthritis (CMS-HCC)
Assessment & Plan
Pt reports using simponi injections monthly
States he is due in 2 weeks
Would need to access home supply if necessary.
Pt states he receives it in mail.

Polyneuropathy, peripheral sensorimotor axonal
Assessment & Plan
Pt states related to chronic lyme but also b12 deficiency
Will restart oral b12 replacement- pt does have low b12 level
He used oral replacement and will start with that here as well.

[table#2]:
Subjective:

HPI: see Mr. McNamara's 3/14 and 17 Notes.

BRB per rectum continues but intermittent without clear cause-and-effect other than "it happens when I'm under stress" (no clear association with BM abnormality).

Denies anal pain or known lesions.

[table#3]:
Past Medical History:
Diagnosis	Date
•	Anxiety

Elizabeth, LCSW - 03/22/2022 9:47 AM EDT
Summary: FN FAMILY CONTACT

Formatting of this note might be different from the original.
Lyn Baird 233-2226, Pt's mother.
Writer received PC from mother who said the Pt is complaining about his physical health, that he woke up sweating profusely last night, that he needs to go to the ED. Writer reviewed last night nursing note, assured mother staff is attending to the Pt as needed and that he was not observed to be sweating. Mother talked about Pt's recent plan to travel the country in a teardrop trailer and wanting to repair his relationship with his father.

Writer explored and supported mother understanding MI symptoms and her struggle knowing what is actually going on for the Pt. Writer offered ongoing FN supports.

Mother said she is interested in getting representative payee status for the Pt's SS income. Writer explained a doctor has to file an application and writer will speak with the doctor.

Plan is to follow up with rep payee application and continue to support mother.(9:13)

Summary: SW - Contact Note

Formatting of this note might be different from the original.
SW met with patient accompanied by Dr. Powers for twenty minutes in consult room to review treatment and discharge goals. Patient meets readily apologetic for actions and affect on Friday. Acknowledges agreement he was manic but resolved over week end and now at baseline Patient seeks discharge or, at minimum, permission to see PCP this afternoon for medical complaints. Desires discharge to resume work as trader . Housing plan uncertain as vacillates between returning to parents or getting apartment by self or with friends. Continued blame to mother for admit noting plan to charge her with committing crime. Further notes would take the consequence and go to jail on her behalf. Affect slightly calmer with less reactivity to limit setting and being told hospital stay to continue at this time. Patient is aware of pending court hearing and appointment of attorney. He spoke with Patient Advocate this morning. Patient assured review of progress held daily and team working to support movement to discharge based on further stability. PCP consult to be held today related to medical concerns. Patient continues to be medication compliant and on phone restrictions

Julia H - 03/21/2022 1:14 PM EDT
Summary: SW - Family Contact Lyn 233 2226

Formatting of this note might be different from the original.
SW updated mother on progress and offered contact number for hospital attorney if any interest in contact - Parents decline need for inclusion or testifying in court But accepted phone number. She notes some improvement per phone calls. Medications from Apothecary Design won't arrive until at least Wednesday at which time she will deliver them - she will keep team apprised for arrangements. She asks if other family supports can call to support patient - SW noted restrictions only apply to outreach call SW to keep mother apprised of progress, she will maintain phone calls to patient at 9 and 4:30 at this time.

Elizabeth, LCSW - 03/21/2022 10:18 AM EDT
Summary: FN FAMILY CONTACT

Formatting of this note might be different from the original.
Lyn Baird 233-2226, Pt's mother.
Writer called mother to check in. Mother reported she is limiting her calls to 9am and 4:30pm. Mother said the Saturday call didn't go well, he ended up hanging up the phone on them but then on Sunday it went well.

Mother reported the Pt told her unprompted he is throwing the meds in the trash over the weekend.

Mother reported the Pt told her the food isn't enough, he is hungry all the time and that he has gained a lot of weight. Writer explained some medica
tions alter the hunger messages and will address with the team. Mother said the pt is C/O of blood in his stool and wants to see his PCP, for her to pick him up today. Writer explained PCP's at SHH, Pt's can't leave the hospital for other appointments. Mother said the Pt also talked about pain in his legs below the knew. Writer explained the team indicated this is a result of the vitamin B shots and will resolve.

Mother explained the Pt has a monthly injection of Simponi from his rheumatologist that is coming due and wanted to Know how to handle it. Mother said the medication is at Apothecary by design, she could pick it up and bring it to SHH. Plan is to talk with the team and let mother know.

Mother asked about laundry. Writer explained there are washers and dryers on the units, Pt's are encouraged and supported to use them.

Mother talked about her own self care which I supported. Mother thanked writer for the supports. Plan is to inform the team of the information in this call and continue to support mother; especially the medication. (21:56)

Writer called mother back and let her know it would be good if she could deliver the medication to SHH. Mother said she isn't sure what day it will be ready, that she will deliver it and coordinate with writer so the very expensive medication will be handled appropriately.

Julia H - 03/18/2022 3:29 PM EDT
Summary: SW - Family Phone Meeting

Formatting of this note might be different from the original.
SW, family navigator, and Dr. Powers spoke by phone with parents in status update, review of plan and ongoing needs. Parents supportive and appreciative of care. SW to keep them apprised. Plan for parent to call 2x day to talk with him at 9am and 4:30pm Per restrictions, patient cannot call them directly Nursing apprised of plan

Electronically signed by Julia H at 03/18/2022 3:33 PM EDT

Julia H - 03/18/2022 12:39 PM EDT
Summary: SW - Contact Note

Formatting of this note might be different from the original.
SW met with patient along with Dr. Powers in consult room. Notes actions and behaviors of team beginning to make him feel manic. Affect irritable, pressured with continued demands that certain staff be fired for continued rights violations. Notes is writing story for news papers, calling attorney, and asks he be given TTV to attend a PCP appointment today. In midst of contact, he receives phone call he has been awaiting and requests to end meeting to accept call. He is aware of continued phone restrictions which he further feels to be rights violations Discussed whether regular timed calls from parents would be helpful so may anticipate calls to which he agreed.

SW to relay information to mother with timed and scheduled calls

Electronically signed by Julia H at 03/18/2022 12:42 PM EDT

Elizabeth, LCSW - 03/18/2022 12:03 PM EDT

Summary: FN FAMILY CONTACT

Formatting of this note might be different from the original.
Lyn Baird 233-2226, Pt's mother.
Writer called mother to check in per plan. Mother reported the active listening advice was helpful, the conversation with the pt was more manageable when she used fewer words and kept it uncomplicated. Mother stated she is going to call 2x a day. Writer encouraged mother to be clear what times she will call so the pt knows, it's scheduled.

Mother reported the pt feels the doctors want nothing to do with him and this is not a healing place. Mother said the Pt is reading the 140 pages of the disability rights document, he is reading it again, informed mother she had committed a class C felony and she needs to hire a lawyer because he doesn't really want her to go to jail. Writer supported mother understanding mania and she is not at risk.

Mother talked about the pt getting well enough to start discharge planning so they can start thinking about that. Writer encouraged mother and father to work on their version of a discharge plan now, to think about rules, boundaries and goals, to be on the same page so they will be clear and prepared when the time comes. Writer explored parents staging rewards and consequences and what that might look like if he comes back to their home. Mother talked about struggling financially as they continue to support the Pt. Mother said the pt gets $1000 a month SSDI and they have been asking him for a budget. Writer encouraged pa
rents to require some portion of the SSDI to go towards his expenses. Writer explained becoming rep payee if needed and talked about the downside to the relationship of taking that step. Mother said the Pt could also get a job. Mother thanked writer for the ideas. Plan is to continue to support family. (31:35)

Associated Order(s): IP CONSULT TO PRIMARY CARE
Formatting of this note might be different from the original.
Maine Behavioral Health
Medical Progress Note

**ID: **William B Seretta is a 34 y.o. male admitted 3/11/2022 for Bipolar 1 disorder (CMS-HCC)

Hospital Day: 7

Date of service: 3/17/2022

Chief Complaint: increasing neuropathic pain

[table#1]:
Assessment and Plan

*** Bipolar 1 disorder (CMS-HCC)**
Assessment & Plan
Followed by psychiatry

B12 deficiency
Assessment & Plan
Possibly related to nitrous oxide abuse, patient is amenable to parenteral replacement and will give 1000 mcg daily IM for 7 days followed by 1000 mcg weekly. He should have follow-up labs with his primary care provider in 4 to 6 weeks. Not anemic at this time

3/17/22

Neuropathic pain increased with parenteral B12. Patient agrees to try gabapentin and will reappoint with Dr. Kleinman in Neurology.

Rectal bleeding
Assessment & Plan
Patient reports having several years of episodes of rectal bleeding that occur "when I am really stressed, and I am really stressed

right now". He underwent colonoscopy for this approximately 3 years ago with Dr.Rolschud at Portland gastroenterology with no significant pathology seen. He does have a history of hemorrhoids in his chart along with the history of rectal bleeding.

He would benefit from repeat colonoscopy and will be referred for same. In the meantime NSAIDs have been stopped and INR/PTT will be checked. Platelets seem adequate

Lyme arthritis (CMS-HCC)
Assessment & Plan
Pt reports using simponi injections monthly
States he is due in 2 weeks
Would need to access home supply if necessary.
Pt states he receives it in mail.

Polyneuropathy, peripheral sensorimotor axonal
Assessment & Plan
Pt states related to chronic lyme but also b12 deficiency
Will restart oral b12 replacement- pt does have low b12 level
He used oral replacement and will start with that here as well.

[table#2]:
Subjective:

HPI: Started since we began treating his B12 deficiency, severe pins and needles, 10/10 pain

Summary: FN FAMILY CONTACT

Formatting of this note might be different from the original.
Lyn Baird 233-2226, Pt's mother.
Writer called mother per SW to check in. Mother reported this is agonizing, grueling for her, the things he is saying are hard to hear. Mother said the Pt called, asked her to make an appt with his PCP and come and get him or he would have to take an Uber and that if mother doesn't get him out of here she doesn't love him. Mother stated she doesn't know how to help and she doesn't want the Pt to feel abandoned.

Writer reviewed and supported mother using active listening skills so the pt feels heard but is not escalated. Writer explained trying to not get involved with the chaos, to give simple direct answers as needed. Mother asked for example. Writer explained when the Pt tells her to come and get her to tell him it is up to the attending physician not her.

Writer explored Pt's baseline with mother. Mother reported the pt is a sweet soul, he is not demanding, he is lovely to have around, he talks with them and eats meals with them, but he does have short term memory issues, he doesn't do anything around the house. Mother stated the Pt is nothing like this presentation at SHH and for the last few weeks.

Writer reviewed mania symptoms. Mother asked about talking with the pt so he doesn't feel abandoned. Writer suggested mother talk with the Pt 1x a day, use the skills we discussed. Mother thanked writer for the supports. Plan is to talk again tomorrow. (19:32)

Julia H - 03/17/2022 11:32 AM EDT
Summary: SW - Contact Note

Formatting of this note might be different from the original.
SW met with patient in consult room accompanied by Dr Powers. Patient requesting to meet asserting that he is "done", has been held a sufficient amount of time and demanding that he be made voluntary and discharged today. Asserts intent to have police accompany him out of hospital given emergency situation. References plans to call attorneys, patient advocate and DRM regarding lost wages and potential lawsuits. Denies mania or any psychiatric needs. Pressured, agitated with periods of elevated volume to voice. Difficulty engaging in conversation with frequent writing of rights violations in journal. Efforts to relay reasons for continued hospitalization, court process, access to legal and advocacy supports held. Patient abruptly ended session by leaving room when discharge request not met. Stated would not be silent today until need met.

Summary: SW - Contact Note

Formatting of this note might be different from the original.
SW met with patient accompanied by Dr. Powers and SW in training, David. Patient meets willingly and is more engaging and conversational than prior contacts. He states feeling better as has obtained some rest. Insight continues to be minimal but recognizes benefit to care and validity of others' concerns. Patient denies being in manic episode and relates energy more to excitement at job prospects, anxiety and fatigue. References differences with past mania which is proof to him that he is not in current one. At same time, he notes benefit to care for rest, reflection and forward movement in solidifying life goals. Speaks of gambling addiction and renewed hope for growth in work with recovery coach. Patient non disclosing of any other substance use. Less anger at mothe
r and signs ROI to father. Belief parents and friends confused excitement for mania but understands it was out of concern and care. Asserts can return home but looking into apartment with friends and maintaining social media work. SW offered support in treatment and discharge planning needs, keeping parents apprised. SW departed room so Dr. Powers and patient may attempt to access Soundcloud for 5 minutes daily requested by patient.

Elizabeth, LCSW - 03/16/2022 11:38 AM EDT

Summary: FN FAMILY CONTACT

Formatting of this note might be different from the original.
Lyn Baird 233-2226, Pt's mother.
Writer received VM from mother and called her back; mother brought father Bill on speaker phone. NO ROI for father so no Pt information will be shared.

Mother reported Pt blaming her for hospitalization, calling a 100x's a day and her setting boundaries especially because they both work full time. Mother stated the Pt has a hard time retaining information, more agitated being involuntary, he thinks he is being quite reasonable, that he feels he is excitable not manic and he is saying the acuity on the unit is quite high, people are much worse than him.

Parents said they want to know the plan, where things are going to they can set their expectations, this is very stressful, and they want to think about how to move ahead. Parents stated they feel this is their shot to get the Pt help. Parents agreed they don't envision him back in their home, he is 34, he wants autonomy and independence.

Writer normalized Pt's blaming parents or others, calling a lot and parents struggling to set boundaries. Writer explained only a physician can hospitalize someone against their will and they do it on the person's presentation to them in that moment, it is not dependent on parents. Writer explored active listening which mother said she is using in conversations with the Pt.

Writer explained hospital processes in general, working to stabilize a Pt, then begin to address what the person wants for a safe discharge plan and family meetings. Writer explained SHH can't create housing, Pt's do discharge to a shelter if necessary, and explained sober housing if the person has an addiction issue. Writer explored motivation to change and supporting versus enabling. Parents said the Pt is talking with friends, one who is homeless and one who is in a sober house about finding a rental together.

Father talked about his work in the MH field right after college that informs this experience as well as other experiences with the Pt.

Parents thanked writer for the call. Plan is to continue to support family as needed. (47:57)

Julia H - 03/15/2022 1:13 PM EDT

Summary: SW - Contact Note

Formatting of this note might be different from the original.
SW met with patient at his request and was seen in his room. He asserts team has been cooperative with him so efforts to also cooperate. Continues to deny need for care and place responsibility for admit and continued stay on mother. Denies mania stating mood is baseline and, if is is manic, then being home resting would more appropriate plan. Reports SW will be hearing from mother, police and lawyers who will all support lack of need for care and discharge.
Continues to decline ROI to father. References plans to sue hospital, ED due to violation of rights and loss of earning power. Accepts phone number to Patient Advocate which he notes no longer having - SW shared having spoken with his mother and outreach to Patient Advocate on his behalf. He notes plan to no longer take medications. After brief conversation, he shifts focus to asking SW to get hand held phone for him as belief nursing station becoming irritated with frequent request. SW encourages patient seek on own and support him in going to nursing station

Associated Order(s): IP CONSULT TO PRIMARY CARE
Formatting of this note might be different from the original.
Maine Behavioral Health
Medical Progress Note

**ID: **William B Seretta is a 34 y.o. male admitted 3/11/2022 for Bipolar 1 disorder (CMS-HCC)

Hospital Day: 4

Date of service: 3/14/2022

Chief Complaint: 1) rectal bleeding x2 days 2) B12 deficiency on routine labs

[table#1]:
Assessment and Plan

*** Bipolar 1 disorder (CMS-HCC)**
Assessment & Plan
Followed by psychiatry

B12 deficiency
Assessment & Plan
Possibly related to nitrous oxide abuse, patient is amenable to parenteral replacement and will give 1000 mcg daily IM for 7 days followed by 1000 mcg weekly. He should have follow-up labs with his primary care provider in 4 to 6 weeks. Not anemic at this time

Rectal bleeding
Assessment & Plan
Patient reports having several years of episodes of rectal bleeding that occur "when I am really stressed, and I am really stressed right now". He underwent colonoscopy for this approximately 3 years ago with Dr.Rolschud at Portland gastroenterology with no significant pathology seen. He does have a history of hemorrhoids in his chart along with the history of rectal bleeding.

He would benefit from repeat colonoscopy and will be referred for same. In the meantime NSAIDs have been stopped and INR/PTT will be checked. Platelets seem adequate

Lyme arthritis (CMS-HCC)
Assessment & Plan
Pt reports using simponi injections monthly

States he is due in 2 weeks
Would need to access home supply if necessary.
Pt states he receives it in mail.

Polyneuropathy, peripheral sensorimotor axonal
Assessment & Plan
Pt states related to chronic lyme but also b12 deficiency
Will restart oral b12 replacement- pt does have low b12 level
He used oral replacement and will start with that here as well.

[table#2]:
Subjective:

HPI: Patient reports having several years of episodes of rectal bleeding that occur "when I am really stressed, and I am really stressed right now". He underwent colonoscopy for this approximately 3 years ago with Dr.Rolschud at Portland gastroenterology with no significant pathology seen. He does also have a history of hemorrhoids. Denies constipation

Nicole, LCSW - 03/12/2022 1:12 PM EST
Summary: SW Psychosocial Assessment

Formatting of this note might be different from the original.
Psychosocial Assessment Psychiatry

Part I : Focal Cause of Admission

Source of Information: Patient and Chart

Reason/Circumstances for Admission : Pt self presented to MMC ED at the urging of his parents. The pt has had several weeks of increasingly manic behavior, including grandiose statements, reckless spending, and aggressive behavior in the community leading to police involvement during an altercation with his father. Family reports that pt has also been smoking marijuana and using nitrous oxide, with 100's of empty whippets being found.

Admission was involuntarily.

Patient known to staff due to prior admission in the past 30 days ? No

Part II : Demographics

A) Family Situation

Age - 34 y.o.

Marital Status - Unable to assess due to pt's current mental status.

Any Children ? - Unable to assess due to pt's current mental status.

Parents: Pt currently lives with his parents in Yarmouth, ME. Pt provides little family history due to his current mental status.

Siblings: Unable to assess due to pt's current mental status.

Have you ever been physically, mentally, emotionally, sexually abused, or exploited ? Unable to assess due to pt's current mental status.

Are you currently the victim of domestic violence or do you have a history of being the victim of domestic violence? Unable to assess due to pt's current mental status.

If Yes, would you like domestic violence resources? N/A

Family of Origin/Developmental History - Pt provides little family history due to his current mental status. Per chart, "Pt was apparently highly successful in high school and went to college in Utah. There, he relapsed into substance use and had significant issues with emergent mental illness. He has been living with his parents for the past 10 years. He is currently unemployed. No current legal issues."

B) Community Supports (These supports can be used in discharged planning)

Who are the important people in your life? Mother, providers

Can we contact them ? Yes

Telephone - Evelyn Baird (mother), 207-233-2226

Primary Physician - Pierce, Daniel C, MD, Intermed, 259 Main St, Yarmouth, ME 04096, (207) 846-8586

Psychiatrist - Dr. Kathleen Abernathy, (207) 846-4008

Therapist - Sarah Siegel, (207) 319-9783

Case Manager - None reported

Other Agencies - None reported

C) Living and Transportation

Prior to ad
mission living arrangement:Private residence/household

Address - 60 Oakland Ave
Yarmouth ME 04096-5320

Who do you live with ? Pt lives with his parents in Yarmouth, ME.

Have you ever had the following ?

Supported Living/Group Home - No
Nursing Facility/Boarding Home - No
Adolescent Residential Services - No

Do you Drive ? Yes

Do you use transportation Services ? No

D) Patient Psychiatric Hospitalizations :

(Where/Date/Reasons) It is unclear if pt has a history of psychiatric hospitalizations. Of note, pt has received outpatient treatment and has been diagnosed with Bipolar 2, Anxiety, and ADHD. Pt also has a history of ECT to treat persistent depression.

Medical Status - See H&P

E) Substance Use / Abuse / Addictive Behaviors

Age first use : Unable to fully assess due to pt's current mental status.

Last Use : Per chart, "pt denied any recent substance use. However, his mother and father have found various nitrous oxide containers around the house. They also believe that he is smoking cannabis. He has a remote history of cocaine use."

Substances Used : Possible cannabis and nitrous oxide use.

Periods of Sobriety : Unable to assess due to current mental status.

Treatments : Unable to assess due to current mental status.

Response to their past treatment : Unable to assess due to current mental status.

Stage of Change : Unable to assess due to current mental status.

Do you have a history of medical/physical issues from your substance use? Unable to assess due to current mental status.

If Yes, what issues have you experienced? N/A

What is the patient's level of awareness of the connection between their behavioral conditions and their pattern of substance use? Unable to assess due to current mental status.

Referral Made to : As pt begins to clear, the treatment team will assess his substance use and motivation for change in order to develop an appropriate plan for treatment in the community.

F) Family History

Mental Illness - Per chart, there is no family history of mental illness.

Substance Abuse - Per chart, there is a family history of substance use but no other specific details are provided.

Trauma History - Unable to assess due to current mental status.

G) Financial

004-90-1799

Do you have insurance - Yes, Medicare

Primary Source of Income - Unable to assess due to current mental status, but he appears to receive family support.

How much monthly ? Unable to assess due to current mental status.

Financial Problems/Concerns Unable to assess due to current mental status.

Who handles your finances? Unable to assess due to current mental status.

H) Education / Occupation / Daily Activities

Grade level completed - Per chart, pt graduated from high school and attended some college in Utah. It is unclear if pt ever graduated.

Employment Status - Pt is currently unemployed.

Past Employment - Unable to assess due to current mental status.

Military Service - None reported

Do you access to weapons including firearms? No

If yes,are weapons or firearms secured in a safe location in your home? N/A

Daily Activities - Per chart, pt is able to complete all ADLs independently.

Leisure Activities- Unable to assess due to current mental status.

Present Concerns - Pt is currently manic, grandiose, impulsive, and has been agitated/aggressive in the community. Pt presents with delusional thought content and poor insight into events leading up to this hospitalization.

I) Legal

Current Charges / Past Charges / Outcome - None reported

Have you appointed a Power of Attorney ? No

Guardianship ? No

Do you have a medical or mental health advanced directive? No

Would you like information ? No

Patient/Family to bring copies of the above? No

J) Religious/Spiritual Beliefs and Background

Religion - None reported

Are there cultural issues that need to be consi
dered in your treatment? - None reported

Patient Strengths/Areas for Improvement - Pt is intelligent, has family support, and has been successful with treatment in the community. This being said, pt has been off medications and is currently manic with poor insight into his symptoms.

Part III : Risk/Acuity Factors

Self Injurious Behavior - No

High Risk Psychosocial Issues Requiring Intervention/Treatment Planning - Pt is difficult to assess at this time due to his current mental status. Per parents, he has likely been using substances in the community and has been off his medications. Pt has been increasingly agitated, has threatened his parents, and recently had a physical altercation with his father in the community.

Anticipated Necessary Steps for Discharge to Occur - Pt will require follow up appointments with primary care, psychiatrist, and counselor. As pt begins to stabilize, the treatment team can explore whether or not additional supports would be helpful, such as case management and/or substance abuse treatment.

Specific Social Work Role in Treatment and Discharge Planning - SW will provide individual and family therapy utilizing CBT/DBT, mindfulness, and psychoeducation. SW will support the pt's participation in group therapy in the milieu. SW will support the pt in exploring his substance use and motivation for change. SW will assist the treatment team with discharge planning and care coordination in order to ensure a safe discharge plan.

Part IV : Social Work Summary Formulation

Pt is a 34 year old male who presents for an involuntary admission from the MMC ED. Pt has a history of Bipolar 2, Anxiety, ADHD, and substance abuse in the community.

Pt self presented to MMC ED at the urging of his parents. The pt has had several weeks of increasingly manic behavior, including grandiose statements, reckless spending, and aggressive behavior in the community leading to police involvement during an altercation with his father. Family reports that pt has also been smoking marijuana and using nitrous oxide, with 100's of empty whippets being found. Pt was agitated and labile in the ED, leading to psychiatric emergency and filing for involuntary hospitalization.

Upon admission to SHH, the pt presents as manic and labile. The pt is hyperfocused on wanting access to a telephone or computer to complete business dealings and move money around. He requests access to Robin Hood and Sound Cloud and believes that he will lose millions of dollars if he is not granted access. Pt reports that things have "really taken off" for him over the past couple of months. He started seeing a new therapist. He admits he was only sporadically taking his medications because he has been so busy with his work. Pt reports that prior to this, he had been extremely depressed and would sleep all day. Per chart, pt has received ECT for his depression in the past. Pt denies substance use despite his parents reporting cannabis and nitrous oxide use. Pt believes his mother "tricked" him into coming to the ED, but he reports that she will be calling the hospital soon to take back everything she has said. Currently, pt does not believe he should be hospitalized and presents with poor insight into events leading up to this hospitalization.

Part V : Initial Plan

Pt will return to the community with follow up from outpatient providers.

Reviewed community resources with patient and family: Yes

Reviewed rights with patient and family: Yes

History Of Present Illness

William B Seretta is a 34 y.o. male admitted with prior diagnoses of bipolar 2 disorder, anxiety, and ADHD who presents as an involuntary patient from the MMC ED with symptoms of mania. Symptoms have reportedly been present for several weeks and the patient has recently threatened violence towards family members and police. His parents have found several 100 empty whippit containers in the patient's room, raising concern for a substance-induced component to his presentation. Pt is treated for chronic lyme arthritis with simponi. He has persistent polyneuropathy symptoms mostly to lower extremities.

Physician examination:

BP 102/75 (Patient Position: Sitting) | Pulse 99 | Temp 37 °C (98.6 °F) (Oral) | Resp 16 | Ht 1.854 m (6' 1") | Wt 93 kg (205 lb) | SpO2 99% | BMI 27.05 kg/m²
Physical Exam
Constitutional:
Appearance: Normal appearance. He is normal weight.
HENT:
Head: Normocephalic.
Right Ear: Tympanic membrane, ear canal and external ear normal.
Left Ear: Tympanic membrane, ear canal and external ear normal.
Mouth/Throat:
Mouth: Mucous membranes are moist.
Eyes:
Extraocular Movements: Extraocular movements intact.
Conjunctiva/sclera: Conjunctivae normal.
Pupils: Pupils are equal, round, and reactive to light.
Cardiovascular:
Rate and Rhythm: Normal rate and regular rhythm.
Pulses: Normal pulses.
Pulmonary:
Effort: Pulmonary effort is normal.
Breath sounds: Normal breath sounds.
Abdominal:
General: Abdomen is flat.
Palpations: Abdomen is soft.
Musculoskeletal:
General: Normal range of motion.
Cervical back: No rigidity.
Skin:
General: Skin is warm and dry.
Neurological:
General: No focal deficit present.
Mental Status: He is alert.
Psychiatric:
Attention and Perception: Attention normal.
Mood and Affect: Affect normal.

Cranial Nerve II-Optic: Intact

Patient asked to read hand held written material with left eye, right eye and both eyes at a distance of 14 inches (approximately arms-length).

Cranial Nerve III-Oculomotor: Intact
Used light to test pupils for reaction to light. Used object to test pupils for accommodation by holding object near, then distant, and then towards patients nose.

Cranial Nerve IV-Trochlear: Intact
Asked patient to follow object with eyes only as object moved upward, downward, sideward and diagonally.

Cranial Nerve V-Trigeminal: Intact
Used blunt and sharp end of object to test response to pain stimuli.

Cranial Nerve VI-Abducens: Intact
Asked patient to follow object with eyes only as it moved through the 6 cardinal fields of gaze to test coordination of eyes and movement in unison with parallel alignment.

Cranial Nerve VII-Facial: Intact
Asked patient to smile, raise eyebrows, frown, puff out cheeks and close eyes tightly.

Cranial Nerve VIII- Vestibulocochlear: Intact
Asked patient to walk across the room and back to assess gait. Asked patient to occlude one ear and then out of patient's s ight made a noise (e.g. rubbed fingers together, held ticking watch to ear, etc.) and asked patient what they heard. Repeated with other ear to assess hearing.

Cranial Nerve IX-Glossopharyngeal: Intact
Asked patient to say “ah” then yawn to observe upward movement of the soft palate. Asked patient to swallow.

Cranial Nerve X-Vagus: Intact
Asked patient to speak to assess for hoarseness and audibility. (Patient asked to swallow during test of Cranial Nerve IX.)

Cranial Nerve XI-Accessory: Intact
Asked patient to shrug shoulders and turn head side to side against resistance.

Cranial Nerve XII-Hypoglossal: Intact
Asked patient to protrude tongue and then move it side to side.

Assessment and Plan:

*** Bipolar 1 disorder (CMS-HCC)**
Assessment & Plan
Followed by psychiatry

Lyme arthritis (CMS-HCC)

Assessment & Plan
Pt reports using simponi injections monthly
States he is due in 2 weeks
Would need to access home supply if necessary.
Pt states he receives it in mail.

Polyneuropathy, peripheral sensorimotor axonal
Assessment & Plan
Pt states related to chronic lyme but also b12 deficiency
Will restart oral b12 replacement- pt does have low b12 level
He used oral replacement and will start with that here as well.

On antibiotic at admission: No
On non-warfarin anticoagulant at admission: No

Formatting of this note might be different from the original.
Chart and note reviewed. Agree with plan of care. Vitamin B12 level is lower than last value available for review from 12/2021. Note that there is concern for nitrous oxide abuse, which is a known cause of vitamin B12 deficiency. If there is concern that vitamin B12 deficiency is contributing to his acute presentation, could consider IM repletion.

Nursing Notes - documented in this encounter

Joanne, RN - 04/05/2022 1:31 PM EDT

Summary: Nursing Note 0700 -1530

Formatting of this note might be different from the original.

Pt medication compliant, bright and cooperative. Pt denies all psychiatric symptoms.Pt was escorted to lobby and discharged at 1303. Pt was picked up by his mother.

Electronically signed by Joanne, RN at 04/05/2022 1:41 PM EDT

Vanessa, RN - 04/05/2022 2:10 AM EDT

Summary: 2300-0300

Formatting of this note might be different from the original.

Uneventful shift. Pt asleep. Respirations noted. No unsafe behaviors noted at this time. Pt remains on 15 min checks 24/7.

Electronically signed by Vanessa, RN at 04/05/2022 2:12 AM EDT

Sonja Williams, FNP - 04/04/2022 11:07 PM EDT

Summary: 3-11 shift note

Formatting of this note might be different from the original.

Pt denies SI/HI and rates both his anxiety and depression levels as low. Pt denies any perceptual disturbances. He presents as organized and linear and displays forward thinking regarding his upcoming discharge. Pt has been bright, social with peers and visible in the milieu. He was medication compliant and received a PRN Benadryl and 1 time dose of Trazodone this evening. He has had good PO intake, reports adequate sleep and has maintained safety this shift.

Electronically signed by Sonja Williams, FNP at 04/04/2022 11:11 PM EDT

Christina, RN - 04/04/2022 1:49 PM EDT

Summary: 7-3 Shift

Formatting of this note might be different from the original.

Pt has been intermittently visible this shift. Pt attended lunch and is social with select peers in community room. Pt denies SI. Pt reports some anxiety, but no more than his usual amount. Pt is bright and forward thinking. Pt looks forward to discharging tomorrow. No unsafe behaviors observed, 15 minute checks maintained 24/7.

Electronically signed by Christina, RN at 04/04/2022 1:51 PM EDT

John, RN - 04/04/2022 6:10 AM EDT

Summary: Night Shift Note

Formatting of this note might be different from the original.

Unremarkable night. Patient slept 10 hours this evening/night shift. No unsafe behaviors observed.

Electronically signed by John, RN at 04/04/2022 6:11 AM EDT

Elizabeth, RN - 04/03/2022 4:49 PM EDT

Summary: Shift note 1500-2300

Formatting of this note might be different from the original.

Patient was polite, pleasant and cooperative. He says his day is good and says it's been a sleepy kind of day. He denies AVH, SI or HI and feels safe with no unsafe behaviors noted. He is medication adherent and is visible on the unit, taking his phone call with his mother. He is discharged focused and no unsafe behaviors noted.

**2100: **He admitted to being very tired tonight and sleeping from after dinner to hs medication pass. Patient took prn Benadryl and Ativan with hs scheduled medications.

Electronically signed by Elizabeth, RN at 04/03/2022 10:11 PM EDT

Jennifer, RN - 04/03/2022 3:06 PM EDT

Summary: 0700 - 1530 shift note

Formatting of this note might be different from the original.

Pt denies SI/ HI and sensory disturbances. He presents as clean, friendly with appropriate rate of speech that is increasingly linear. Observed as mostly resting in room this shift but did go to cafe for meals and appropriately assertive with needs. Pt is looking forward to tentative discharge on Tuesday to family with outpatient resources. He was medication compliant and used mouth checks, PRN nicotine patch declined. Fair hygiene ADLs, good dietary intake. No unsafe behaviors; pt remains on 15 min checks 24/7.

Electronically signed by Jennifer, RN at 04/03/2022 3:07 PM EDT

John, RN - 04/03/2022 5:14 AM EDT
Summary: Night Shift Note

Formatting of this note might be different from the original.
Uneventful shift. Pt requested PRN 1mg Ativan @ 0016 hoping it would help calm his nerves and help him sleep-which had good effect. Pt appeared to sleep through the night without waking. Pt remains on 15 minute safety checks 24/7.

Electronically signed by John, RN at 04/03/2022 5:18 AM EDT

Elizabeth, RN - 04/02/2022 9:57 PM EDT
Summary: Shift note 1500-2300

Formatting of this note might be different from the original.
Patient is looking forward to discharge and is very happy today. He is medication compliant and took prn Ativan and Benadryl tonight. He denies AVH, is visible in the milieu, and attends groups. No unsafe behaviors noted.

Electronically signed by Elizabeth, RN at 04/02/2022 10:00 PM EDT

Jennifer, RN - 04/02/2022 2:53 PM EDT
Summary: 0700 - 1530 shift note

Formatting of this note might be different from the original.
Pt denies SI/ HI and sensory disturbances. He presents as clean, friendly with appropriate rate of speech that is increasingly linear. Observed as mostly resting in room this shift but did go to cafe for meals and appropriately assertive with needs. Pt is looking forward to tentative discharge next week to family with outpatient resources. He was medication compliant and used mouth checks, PRN nicotine patch declined. Fair hygiene ADLs, good dietary intake. No unsafe behaviors; pt remains on 15 min checks 24/7.

John, RN - 04/02/2022 5:20 AM EDT
Summary: Night Shift Note

Formatting of this note might be different from the original.
Uneventful night. Patient appeared to sleep 9 hours overnight. He remained safe through the shift.

Electronically signed by John, RN at 04/02/2022 5:22 AM EDT

Elijah, RN - 04/02/2022 12:03 AM EDT
Summary: Shift Note (1900-2330)

Formatting of this note might be different from the original.
Patient was isolative to his room most of the shift. He was pleasant, polite, and cooperative with this nurse upon check-in. He says he is focused on discharge so that he can "get back to work." Patient denies SI/HI/AVH. Patient is HS medication compliant with PRN ativan given to good effect. Patient remains on 15 minute checks 24/7.

Electronically signed by Elijah, RN at 04/02/2022 12:09 AM EDT

Kimberly, RN - 04/01/2022 7:18 PM EDT
Summary: Shift Note 0700-1930

Formatting of this note might be different from the original.
Shift Note 0700-1930

Patient is pleasant, polite and cooperative with this RN during 1:1 assessment. Patient is mostly seen resting in his room, but comes to staff appropriately for needs. Patient reports he is tired from overnight unit disturbances. Patient is medication compliant with no PRN's given this shift. Patient Depakote will decrea
se from 2500 mg a day to 2250 mg a day tomorrow. Patient has been going to the cafeteria with peers to select meals and eating on the unit. Patient Patient denies SI, HI, AH and VH when directly asked. Patient continues on 15 minute checks and does not require redirection for unsafe behavior.

Electronically signed by Kimberly, RN at 04/01/2022 7:30 PM EDT

Paulette, RN - 04/01/2022 6:06 AM EDT
Summary: Overnight:1900-0730

Formatting of this note might be different from the original.
Patient slept throughout most of the shift , he was able to make his needs known at the nursing station, uneventful overnight.15 minutes checks continues.

Electronically signed by Paulette, RN at 04/01/2022 6:08 AM EDT

Betty, RN - 03/31/2022 4:43 PM EDT

Formatting of this note might be different from the original.
3-11 end of shift note:

Sleep Quality: Napped at beginning of shift.

Peer/Milieu Interaction: Pt. is visible and social with peers. Easy to engage.

Phone calls: Left message on phone.

Group Attendance: None.

Medication compliance: Pt. is medication compliant also requesting benadryl for sleep.

Goals and focal problems: Pt. denies SI/HI. He rates his anxiety as a 6 and depression as a 4.

He denies Aud/visual hallucinations.

Electronically signed by Betty, RN at 03/31/2022 9:36 PM EDT

Jennifer, RN - 03/31/2022 2:55 PM EDT
Summary: 0700 - 1530 shift note

Formatting of this note might be different from the original.
Pt denies SI/ HI and sensory disturbances. He presents as clean, friendly with appropriate rate of speech that is increasingly linear. Observed as mostly resting in room this shift but did go to cafe for meals and appropriately assertive with needs. Pt participated with a family meeting today that resulted in a tentative discharge date of early next week. He was medication compliant and used mouth checks, PRN nicotine patch declined. Fair hygiene ADLs, good dietary intake. No unsafe behaviors; pt remains on 15 min checks 24/7. Specimen collected, labeled, and placed in fridge for surveillance, asymptomatic COVID testing. Computer privileges were regained.

Electronically signed by Jennifer, RN at 03/31/2022 2:58 PM EDT

Paulette, RN - 03/30/2022 9:16 PM EDT
Summary: Overnight:1900-0730

Formatting of this note might be different from the original.
Evening: O/A to unit found patient in his room, breathing adequately, nil unsafe behavior observed.Patient is mostly isolative to his room, and intermittently comes to nursing station to make needs known.He denies any perceptual disturbances and reports that his anxiety and depression level is "up there".He went to say that currently he is not in any pain and that being in the community room socializing helps a lot Patient is compliant with treatment regime.

Night: Patient slept throughout most of the shift, nil unsafe behaviors observed, 15 minutes checks continues.

Electronically signed by Paulette, RN at 03/31/2022 6:41 AM EDT

Joanne, RN - 03/30/2022 3:06 PM EDT
Summary: 0700 - 1930 Shift Note

Formatting of this note might be different from the original.
Pt has been isolative to his room coming out for meals, medication and to make his needs known. He denies SI, HI, AVH and endorses anietyand depression. He c/o 5/10 bilateral leg/foot pain and reports the gabapentin helps somewhat. He is discharge focused and anxious to return to his job. Pt has maintained safe behavior.

Electronically signed by Joanne, RN at 03/30/2022 3:09 PM EDT

John, RN - 03/30/2022 5:44 AM EDT
Summary: Night Shift Note

Formatting of this note might be different from the original.
Pt had unremarkable shift. He slept the entire night. No unsafe behaviors observed.

Electronically signed by John, RN at 03/30/2022 5:45 AM EDT

Kimberly, RN - 03/29/2022 6:47 PM EDT

Summary: Shift Note: 0700-1930

Formatting of this note might be different from the original.
Shift Note 0700-1930

Patient is pleasant, polite and cooperative with this RN during 1:1 check in. Patient is intermittently visible on the unit, often seen in room in bed, however does come to staff appropriately for needs. Patient has not been attending unit activities reporting that he just feels under the weather. Patient appears to be superficially linear and organized, has good PO intake and hygiene. Patient is medication complaint and no PRN's given this shift. Patient's haldol increased to 10 mg twice daily. Patient denies SI, HI, AH and VH when directly asked by this RN during assessment. Patient has been going to café with peers for meals and eating on the unit. Patient continues on 15 minute checks. Patient did not require redirection for unsafe behavior.

Electronically signed by Kimberly, RN at 03/29/2022 6:49 PM EDT

John, RN - 03/29/2022 4:48 AM EDT
Summary: Night Shift Note

Formatting of this note might be different from the original.
Uneventful Shift. Pt appeared to sleep through the night. No unsafe behavior observed.

Formatting of this note might be different from the original.
Unremarkable shift. Pt appeared to sleep through the night. No unsafe behaviors observed.

Electronically signed by John, RN at 03/26/2022 5:39 AM EDT

Vanessa, RN - 03/25/2022 8:12 PM EDT
Summary: Shift Note 1500-2330

Formatting of this note might be different from the original.
Pt has been intermittently visible on the unit. Denies SI/SIB/HI and AVH at time of assessment. Pt reports some anxiety and depression. Pt states that he spoke with his mom earlier and was upset that she accidentally deleted his laptop/computer Bitcoin hard drive? Pt states that he was initially upset, but reports that he was able to "cool down" after being in his room for a little bit. Pt was seen talking to his mom at the nursing station - conversation was not pleasant. Pt is still grandiose and delusional - pt states that he owes his parents $7,000 and that the Bitcoin hard drive was worth $26,000. Pt reports that he was planning to pay his dad back the money with that and states that he just needs his phone. Pt is understanding that he has cell phone restriction orders and is unable to use it. Medication compliant. Pt reports that he has been sweating every time he sleeps, unsure of source. Pt believes it is his medication causing him to excessively sweat while sleeping. No unsafe behaviors noted at this time. Pt remains on 15 min checks 24/7.

Electronically signed by Vanessa, RN at 03/25/2022 10:29 PM EDT

Summary: Shift Note (2330-0730)

Formatting of this note might be different from the original.
Uneventful shift. Patient slept throughout the overnight hours.

Electronically signed by Elijah, RN at 03/25/2022 4:35 AM EDT

Sonja Williams, FNP - 03/24/2022 7:13 PM EDT
Summary: 3-11 shift note

Formatting of this note might be different from the original.
Pt denies SI/HI and any perceptual disturbances. He rates his anxiety as 7/10 and depression as 7/10. Pt has delusions of grandeur. He has been cooperative and has adhered to p
hone restriction with staff reminders. Pt has been medication compliant and received PRN Tylenol for bilateral foot pain.He has been visible in the milieu, clean, had good PO intake and maintained safety this shift.

Electronically signed by Sonja Williams, FNP at 03/24/2022 10:30 PM EDT

Jennifer, RN - 03/24/2022 2:44 PM EDT
Summary: 0700 - 1530 shift note

Formatting of this note might be different from the original.
[table#1]:
[table#1.1]

[table#1.1]:
| Pt denies SI/ HI and sensory disturbances. He presents as clean, friendly with less pressured speech but
remains grandiose and delusional. He was medication compliant and used mouth checks, PRN nicotine patch administered, (patient's own) Simponi administered subcutaneous into right thigh by pt (witnessed by this writer), tolerated well. Fair hygiene ADLs, good dietary intake. No unsafe behaviors; pt remains on 15 min checks 24/7. Phone restriction order changed to include 4 outgoing calls per day, made at nurses' station - pt made no successful outgoing call this shift. |

John, RN - 03/24/2022 5:13 AM EDT

Summary: Night Shift Note

Formatting of this note might be different from the original.
Patient stayed isolated to room for most of shift and appeared to sleep well. He did come out to RN station once and returned to sleep. No unsafe behaviors observed.

Electronically signed by John, RN at 03/24/2022 5:15 AM EDT

Elijah, RN - 03/23/2022 10:51 PM EDT
Summary: Shift Note (1900-2330)

Formatting of this note might be different from the original.
Patient was pleasant, polite, and cooperative with this nurse during check-in. HS medication compliant with no prns given this shift. Denies SI/HI/AVH. Patient was linear and organized with no speech deficits. He is in good behavioral control and remains on 15 minute checks 24/7.

Electronically signed by Elijah, RN at 03/23/2022 10:55 PM EDT

Hope, RN - 03/23/2022 5:41 PM EDT
Summary: Nursing Note 1530-1930

Formatting of this note might be different from the original.
Patient was resting early in the shift. He was pleasant and cooperative with this RN during assessment. He denies SI/HI. He reports feeling tired. He denies perceptual disturbances. Speech was logical and linear and normal rate rhythm and tone. Some grandiosity was present.

Patient was easily frustrated on the phone with his mother but was able to maintain appropriate behavioral control. He went to the cafe for the first time with his new IH status and was polite, cooperative and pleasant.

Electronically signed by Hope, RN at 03/23/2022 5:54 PM EDT

Jennifer, RN - 03/23/2022 2:34 PM EDT
Summary: 0700 - 1530 shift note

Formatting of this note might be different from the original.
Pt denies SI/ HI and sensory disturbances. He presents as clean, friendly with less pressured speech but remains grandiose and delusional. He was medication compliant and used mouth checks, PRN nicotine patch administered. Fair hygiene ADLs, good dietary intake. No unsafe behaviors; pt remains on 15 min checks 24/7. Phone restriction order remains in place. Pt had court today and reports that he received 30-day commitment. Freedom of Movement changed to InHouse

Electronically signed by Jennifer, RN at 03/23/2022 2:37 PM EDT

Alison, RN - 03/22/2022 11:03 PM EDT
Summary: 1900-2330 shift note

Formatting of this note might be different from the original.
Patient was awakened for his HS meds. He was drenched in sweat and his mattress/sheets were wet. Patient is wearing heavy sweat pants, a running shirt and has layers of blankets,as well as a heavy comforter. Suggested to patient that he may have too many layers on but he stated he thought he was so sweaty due to his nicotine patch. Advised patient that he might not want to sleep with the patch on due to possibility of nightmares and he replied "Yeah, I was Having really weird dreams." Patient removed patch. Assisted pt in changing his linens. He is medication compliant, pleasant and cooperative. He came out to the desk and drank 3 large glasses of OJ.

Electronically signed by Alison, RN at 03/22/2022 11:08 PM EDT

Kimberly, RN - 03/22/2022 6:59 PM EDT
Summary: Shift Note: 0700-1930

Formatting of this note might be different from the original.
Patient is polite, pleasant and cooperative with this RN during 1:1 assessment. Patient has been mostly isolative to room, but has been out to staff appropriately for needs. Patient denies SI, HI, AH and VH when directly asked. Patient is medication compliant and was given PRN tylenol for chronic bilateral leg pain with minimal effect. Provider S Powers, MD was advised and sn order for a PCP consult was placed. Patient has court tomorrow and did meet with the court appointed attorney in the conference room. Patient continues on 15 minute checks 24/7. Patient did not require redirection for unsafe behaviors.

Electronically signed by Kimberly, RN at 03/22/2022 7:05 PM EDT

Alyssa, RN - 03/22/2022 3:51 AM EDT

Summary: 2300-0730

Formatting of this note might be different from the original.
Pt awoke around 0130, c/o being diaphoretic and having "a gallon of water in [his] sweatshirt." Pt VSS, no beads of sweat visualized. Pt does not have any other sx. Educated pt about too many layers at night. Gave fluids, snack and change of bedding. Slightly pressured speech and can get a bit loud when speaking. Polite.

Electronically signed by Alyssa, RN at 03/22/2022 3:51 AM EDT

Vanessa, RN - 03/21/2022 10:34 PM EDT
Summary: Shift Note 1500-2330

Formatting of this note might be different from the original.
Pt has been intermittently visible on the unit. Denies SI/SIB/HI, AVH, and depression
at time of assessment. Pt reports moderate anxiety. He reports that his goal is to discharge from SHH. Pt still has pressured/rapid speech. Pt has been bright and polite at nursing station. Medication compliant. Requested PRN Nicotine gum. No unsafe behaviors noted at this time. Pt remains on 15 min checks 24/7.

Electronically signed by Vanessa, RN at 03/21/2022 10:34 PM EDT

Christina, RN - 03/21/2022 2:38 PM EDT
Summary: 7-3 Shift

Formatting of this note might be different from the original.
Pt has been withdrawn most of the shift, but comes to nurses station for needs and phone calls. Pt is compliant with phone restrictions. Pt became a bit upset today after speaking with his mother and frustration that his appointment with his own PCP was cancelled by her. Pt utilized PRN zyprexa with good effect. Pt reports anxiety and has an irritable edge. Pt denies SI. Pt reports wanting to return to his job "trading crypto" and makes grandiose claims regarding his employment.

Pt had several physical complaints today stating he had leg pain that feels like pins and needles. Pt requested PRN tylenol which he used with good effect. Pt also reported blood in his stool that was also all over the bathroom floor. No blood was visualized. Charge RN visualized stool and reported trace amounts of blood on stool/toilet tissue. Per pt this happens when he becomes stressed. Provider made aware and primary care consulted.

No unsafe behaviors observed this shift. 15 minute checks maintained 24/7.

Electronically signed by Christina, RN at 03/21/2022 2:44 PM EDT

John, RN - 03/21/2022 5:04 AM EDT
Summary: Night Shift Note

Formatting of this note might be different from the original.
Patient was up a few times to RN Station for some chicken broth and some gingerale. Pt was superficially pleasant. No unsafe behaviors observed.

Electronically signed by John, RN at 03/21/2022 5:05 AM EDT

Vanessa, RN - 03/20/2022 8:10 PM EDT
Summary: Shift Note 1500-2330

Formatting of this note might be different from the original.
Pt has been intermittently visible on the unit. Denies SI/SIB/HI and AVH. Pt reports moderate anxiety and minimal depression. Pt reports that he has been napping throughout the day and his goal is to leave SHH. Pt appears clean/well groomed. Pt is bright. Speech is less pressured, but still grandiose. Medication compliant. Pt requested PRN Nicotine gum and Benadryl. No unsafe behaviors noted at this time. Pt remains on 15 min checks 24/7.

Summary: Shift Note 0700-1930

Formatting of this note might be different from the original.
Shift Note 0700-1930

Patient is irritable and easily agitated with this RN during 1:1 assessment. Patient is pressured, labile, hyper verbal and grandiose. Patient continues expresses frustration with not being allowed to use computer or access his cell phone or debit cards. Patient continues on a phone restriction and expresses frustration with not being able to call PCP. Patient is at desk asking to make calls, patient was allowed to make calls but was asked several times to step away from the desk when he is not on the phone or up for needs. Patient continues to demand to leave, reporting that he was “starting to feel manic”. This RN asked what that looked like for him and he responded by saying “you’re looking at it”. Vitals were taken BP 158/102, P 113, RR 18 o2 100% RA. Provider notified and came to unit to see patient. Patient required redirection away from the nurse’s desk and needed to be given specific times to check in to make calls. Patient was advised that parents will call at scheduled times and he became agitated as he felt we were limiting their contact. Patient was advised they can call mot we were just creating a structure so he would know when to anticipate the calls. Patient had olanzapine increased to 20 mg, and Depakote increased to 500 mg BID and 1000 mg at bedtime. Patient was aware and compliant with medication changes. Patient was calmer as the shift went on and stayed resting in room. Patient was apologetic with this RN for getting upset earlier, stating he doesn’t really want to fight so much as it is getting to be exhausting for him. Patient denies SI, HI, AH and VH when directly asked. Patient continues on 15 minute checks 24/7. Patient did not require redirection for unsafe behavior.

Kimberly, RN - 03/17/2022 6:11 PM EDT

Summary: Shift Note 0700-1530

Formatting of this note might be different from the original.
Shift Note 0700-1530

Patient is irritable and becoming increasing and easily agitated with this RN during 1:1 assessment. Patient is pressured, labile, hyper verbal and grandiose. Patient expresses frustration with not being allowed to use computer or access his cell phone or debit cards. Patient was upset and was demanding to leave, reporting that he called for a cab to come pick him up today and that he needed to get to an appointment. Patient at the nurse's desk repeatedly calling his parents, PCP, 911, and non-emergency numbers for Westbrook, Yarmouth and Falmouth PD. Patient called Westbrook PD stating he had a medical emergency but would not elaborate on what was wrong. Patient did not appears in any acute distress. Patient was placed on a phone restriction and needs to have calls dialed by staff at desk and is not allowed to use the cordless phone at this time. Patient may only place calls to lawyer, clergy, and disability rights and SHH patient rights liaison, and patient is aware of this restriction. Patient declined to take any of his scheduled medications unless this RN called his PCP at Intermed and verified his medications as he was getting them. Provider S Powers, MD was advised and came to unit to see patient. Patient took morning medications at 1120 and stated that he was in a lot of pain in his legs and exp
ressed it was related to his B12 injections. Patient was given PRN Tylenol for 9/10 pain with poor effect as patient was yelling in pain, reporting it was "now a 10/10", stating his legs were burning and felt like they were on fire. Provider Powers, MD was advised and a PCP consult was placed. Patient was seen by primary care and a new order was placed for gabapentin. Patient was given first dose this afternoon. Patient continued to remain at desk making calls, stating he was going to "take up all of your time doing this, I have a lot of calls to make". Patient required redirection away from the nurses desk and needed to be given specific times to check in to make calls. Patient denies SI, HI, AH and VH when directly asked. Patient continues on 15 minute checks 24/7. Patient did not require redirection for unsafe behavior.

Elizabeth, RN - 03/16/2022 7:18 PM EDT
Summary: Shift note

Formatting of this note might be different from the original.
Patient was in his room when this writer approached him to assess. He is pleasant, polite and cooperative. His speech was rapid and slightly pressured saying he needs to leave and promises to return after being gone for a short time. He then went on to say he will lose his job with Sound Cloud if he does not log in today as he has not been able to for 10 days. He said he has been unable to get on the Internet since he has been here, including last Friday when he should have made stock trades. He is perseverative on leaving and goes on to ask who his guardian is. He has been visible on the unit, attending some groups, denies AVH. He says he is very anxious "off the charts", and mood is sad. He complained of chronic bilateral lower extremity pain and took prn Tylenol.

Electronically signed by Elizabeth, RN at 03/16/2022 8:57 PM EDT

Carrie, RN - 03/16/2022 3:06 PM EDT

Summary: Day Shift

Formatting of this note might be different from the original.
Patient is medication compliant, took prn Ativan with calming effect, denies ill effects from medications. Pt is calmer today, mood more stable overall, less perseverative, more reality based. Pt's mood is superficially cheerful and polite. Pt has remained in safe behavioral control.

Electronically signed by Carrie, RN at 03/16/2022 3:10 PM EDT

John, RN - 03/16/2022 5:40 AM EDT
Summary: Night Shift Note

Formatting of this note might be different from the original.
Patient slept all through the night and was awake at 0515. Pt is pleasant, calm and appreciative of care. No unsafe behaviors observed.

Summary: Shift Note: 0700-1930

Formatting of this note might be different from the original.
Shift Note 0700-1930

Patient is polite and cooperative with this RN during 1:1 assessment, though does have and irritable edge and can become easily agitated. Patient is pressured, labile, and grandiose. Patient expresses frustration with not being allowed to use computer or access his cell phone. Patient continues to state he needs to speak to someone about selling stocks, and wanted this RN to go onto a website to verify he is still employed. This RN advised that we would not be able to do that for him, he suggested he could ask his mom. Patient is pacing in the hall and spends most of the shift talking on the cordless phone and will often ask for it as soon as he returns it to the desk. Patient is often call
ing mom or trying to get food ordered, he was unable to get food delivered today. Patient denies SI, HI, AH and VH when directly asked. Patient continues on 15 minute checks 24/7. Patient did not require redirection for unsafe behavior.

Sonja Williams, FNP - 03/13/2022 10:47 PM EDT
Summary: 3-11 shift note

Formatting of this note might be different from the original.
Pt denies SI/HI and any perceptual disturbances. He endorses anxiety and depression. Pt's speech is rapid and pressured. He presents as grandiose and paranoid as evidenced by his statements that he made thousands of dollars a day as a top representative for Google and that he recorded all his interactions at MMC. Pt voiced his desire to discharge tomorrow. He has been isolative to room and self. Pt has been cooperative and medication compliant, he received a PRN Ativan with good effect.

Electronically signed by Sonja Williams, FNP at 03/13/2022 10:56 PM EDT

Carrie, RN - 03/13/2022 2:16 PM EDT
Summary: Day Shift

Formatting of this note might be different from the original.
Patient is medication compliant, education provided, demonstrated understanding, requested prn Ativan for anxiety with calming effect and later (1500) given prn Zyprexa for agitation to be assessed. Pt perseverates on need to access his phone and a computer or he will loose his job. Pt shares he has already lost thousands of dollars. Pt continues to be explained that this needs to adressed with his doctor on Monday. Pt states he is "definetly leaving tomorrow" and makes vague threats about leaving the hospital no matter what. Pt remains superficially polite with an irritable edge. Pt seems to have delusions of grandeur in conversation without insight into his situation. Pt remains in behavioral control with therapeutic listening and respectful but clear redirection.

Barbara, RN - 03/12/2022 10:19 PM EST
Summary: Evening Note

Formatting of this note might be different from the original.
The patient has been visible taking walks in the halls or talking on the phone at the beginning of the shift. His mother brought him some clothing supplies. He stated that he would like to use his phone to left a message with Sound Cloud this weekend. The patient was encouraged to talk with the Treatment Team about his request on Monday. He stated, “It won’t matter then because I am going home on Monday”. He denied having any suicidal ideation, homicidal ideation or perceptual disturbances.

Later in the evening, the patient was noted going into another patient’s room (on the A side). This nurse was in the room and he was easily redirected back to his room on the B side. The patient was cooperative with taking his evening scheduled medications as well as a PRN Ativan. He stated that he was in Maine med for 4 days and that staff were laughing at him there. He stated “I’m going to sue or they can apologize”. He remained regulated during this conversation.He asked, "Am I doing OK?". He was easily reassured and transitioned back to his room for the Night.He is currently resting quietl
y, eyes closed, even respirations.

ADMISSION NOTE:

Patient arrived on unit 2W accompanied by unit staff at 1315, wearing hospital issued maroon scrubs and ambulating independently. Patient was given a tour of the unit, provided admission packet and shown to his room, given toiletries and towels. Patient was given and ate from lunch tray. Patient is a 34 yo male who is admitted on an involuntary basis to SHH from MMC ED. This is patient's first admission to SHH. Patient was brought to ED after making threats to parents and police. Patient has been off meds and is delusional and paranoid. Patient states he is worried about his parent's mental health, and they are actually concerned about his mental health. Currently denies SI, HI, SIB and states will be safe here. Patient is motivated for treatment, stating he will do whatever we need him to do. Patient was initially declining medications in the ED and required IM medications. He is currently taking PO medications without issue, patient had a very healthy appetite and is up to desking frequently asking for snacks, per report from MMC ED patient was receiving 2 meal trays for each meal. Tox screen at ED positive for THC and benzos. Patient did not require redirection for unsafe behavior.

Summary: SHH Admission Nurse Note

Formatting of this note might be different from the original.
This is a 34 yo SWM being referred by MMC-ED for Involuntary In-Pt. Treatment. He lives in Yarmouth with his parents. He has Medicare and Mainecare. He is reportedly unemployed but references a job, "making music." This is his 1st In-Pt. Psychiatric Admission. He has a PCP, addiction counselor, (for gambling,) and a Psychiatric provider. He is Rx. Medication. Per referral, Pt. arrived at the ED on 3/7/2022 accompanied by his parents, with Hx. of Bipolar D/O, Anxiety and ADHD, with medical Dx including Polyneuropathy and chronic Lyme disease. ED and family reported Pt. with mania over the past 2-3 weeks culminating in aggressive behavior towards family and Police. He reported not taking his meds recently and he denied recent SA. Parents reported Pt. with mania, grandiosity, paranoia, and spending increased amounts on Marijuana and "whippits." On Thursday, Pt. reportedly had a fight with father over the use of the car and Pt. called the Police stating he was being choked, (although Police found no evidence of.) Police encouraged him to sleep elsewhere and Pt. reportedly slept in his car, at friends and in a hotel. Pt. had reportedly made threats to attack the Police with a knife if they were called on him, and attack others if he was taken to the hospital. While in ED, he presented hyperactive, with mood lability, irritability, grandiose, perseverative, with rapid speech and flight of ideas, paranoia and delusions. He reported his family sabotaging his ability to "succeed in life." He spoke of meeting with executives from a music company, Apple and Google. He also spoke of large amounts of Crypto currency and need to "divest." At one point in ED, Pt. wanted to leave and threatened "to fight my way out if I need to." He denied SIB, SI, HI, or AVH. Pt. currently reports he is being admitted because his parent
s lied to get him here. They said he had threatened with a knife, and he denies any such threats. He states he is going to sue his parents and he has a lawyer through Joe Bornstein." He presents as polite, cooperative, and pleasant in his interactions with staff. He was cooperative with the interview and able to take direction from staff for search process. His affect was bright, smiling much of the time. Eye contact was good, speech was clear. He tends to get ahead of the interview but was cooperative with redirection. He states he is here and agreeable to working with the team. He continues to deny SIB, recent/current SI or plan/intent to harm/kill self in community or SHH. He reports he will seek out staff and talk if feeling uncomfortable, upset or unsafe on Unit. He denies HI and denies making threats to others. He denies recent abuse/trauma, although feels father has been verbally abusive his whole life. He states he last used Alcohol 9/2021 when he had a couple Beers. He denies any issues with alcohol. He reports he vapes MJ/THC and uses some edibles. He smokes a few hits a day, but was vague with amounts/frequency of edibles. He last used "Whippits," over a month ago, at that time was using a box of 50/day. He denies the use of any other substance recently. Pt. was safe during his stay in admissions and was monitored on 1:1 status then changed to 15 minute checks by Attending, (Dr. Powers,) following report by this writer. He complained of chronic BLE pain from the knees down from having frostbite previously. He rated the pain as a "4" and described it as tingly and numb. He states he treats it with a lot of Ibuprofen at home. Report was given to 2 West Unit Nurse, (Kim.) Pt. Was searched and escorted to Unit without reported incident.

(ABNORMAL) VITAMIN D 25-HYDROXY TOTAL (DEFICIENCY SCREENING ASSAY) - Final result (03/17/2022 6:53 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Vitamin D 25-Hydroxy	**14.6 (L)**	25.0 - 50.0 ng/mL			NORDX SCARBOROUGH CAMPUS	

Comment:

```
<13 ng/mL (deficient)
13-24 ng/mL (inadequate)
25-50 ng/mL (sufficient)
>50 ng/mL (possibly harmful level - this is a suggested range
according to the IOM/CDC 2011 guidelines, please interpret
within the clinical context)
```

SARS-COV-2 ASYMPTOMATIC PCR SCREEN - Final result (03/15/2022 4:58 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.

This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.

This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

(ABNORMAL) VITAMIN B12 + FOLATE LEVELS - Final result (03/12/2022 6:11 AM EST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Folate Level	5.0	4.8 - 20.0 ng/mL			NORDX SCARBOROUGH CAMPUS	

Comment:
Please interpret with caution. High doses of biotin (for MS treatment, oncology patients, or beauty products) can falsely increase the result.

Vitamin B12 Level	**205 (L)**	232 - 1,245 pg/mL			NORDX SCARBOROUGH CAMPUS	

Comment:
RESULT IS INDICATIVE OF B12 DEFICIENCY: ADDITIONAL TESTING
FOR INTRINSIC FACTOR BLOCKING ANTIBODY IS RECOMMENDED
TO EVALUATE CAUSE.

Pt crying hysterically in room reporting he is having an emergency..this occurring after previous interactions of staff being summoned to pts room every 3 minutes as pt is increasingly restless and inpatient that he cannot have the portable fall whenever he demands it as it is being used by other patients. Pt asked repeatedly for patience, he will then be calm and cooperative with staff being thankful and reporting he understands. 2 minutes later pt calls to staff demanding that we move faster to get him the phone. Pt told sternly he needs to speak to staff respectfully and stop being demeaning to staff.

...Pt reporting his legs are numb, pt hyperventilating and crying, reporting he is dying. Pt told to calm himself down and practice deep breathing. Pt demanding to see a doctor. Pt told we can ask a doctor to see him, pt began snapping his fingers and clapping his hands in this writers face reporting it needs to happen now. Pt told he will be left alone for 10 minutes to calm himself down so we can have a mature, adult conversation. Pt remains on security watch and telesitter

Pt changed into paper scrubs willingly. Pt reports being dropped off by mom here after being tricked, however pt confirms he is here voluntarily. Pt reports he has been depressed for years and is finally "getting it together". Reports verbal and physical altercations with family the past two days, was kicked out of the home and has been living in his car but then his care blew up. Pt endorses being scammed out of millions of dollars but also being signed for his music and being hired and fired by apple yesterday. Pt's speech is loud, disorganized. Pt declined to give over his phone until he confirmed that that was standard practice with security. Security present, pt voluntarily handed over his phone. Signed on with security. No SI or HI

History

[table#2]:

Chief Complaint
Patient presents with
•	Crisis Eval

Chief Complaint: "My parents wanted me to come in"

I saw this patient primarily. I have seen and examined the patient myself and am responsible for the care plan.

HPI

This is a 34 y.o. male who presents with above. Patient presents via private vehicle, reports that his parents have told him to come to the emergency department. Patient is concerned because he believes his parents are conspiring against him, have prevented him from excepting several jobs that he got all at once with different technology companies, and they have revoked access to his phone. He also believes that he is being surveilled by the police department. Patient has a history of bipolar disorder, reports has been compliant with his medications and this is "the best of ever felt." He thinks that his parents and others or jealous and concern for no reason. He in fact is concerned about the health and wellbeing of his parents. Reports he did get in a verbal altercation with his father the other night. Patient himself denies suicidal or homicidal ideation. Denies recent illness, fevers or chills, chest pain or shortness of breath. Denies illicit drug or alcohol use.

[table#3]:
Patient Active Problem List
Diagnosis
•	Major depression, recurrent, chronic (CMS/HCC)
•	Polyneuropathy, peripheral sensorimotor axonal

[table#4]:
Past Medical History:
Diagnosis	Date
•	Anxiety	
•	Arthritis	
•	Attention deficit disorder	
•	Depression	
•	Irritable bowel	
•	Other digestive problems	
	diarrhea
•	Other digestive problems	
	rectal hemorrhage
•	Other digestive problems	
	hemorrhoids
•	Other digestive problems	
	diaphragmatic hernia

No past surgical history on file.

No family history on file.

[table#5]:
Social History

[table#6]:
Tobacco Use
•	Smoking status:	Never Smoker
•	Smokeless tobacco:	Never Used

Review of Systems
Constitutional: Negative for chills and fever.
HENT: Negative for trouble swallowing.
Respiratory: Negative for shortness of breath.
Cardiovascular: Negative for chest pain.
Gastrointestinal: Negative for nausea and vomiting.
Neurological: Negative for headaches.
Psychiatric/Behavioral: Negative for agitation, behavioral problems, dysphoric mood, self-injury and suicidal ideas. The patient is hyperactive.

All other systems reviewed and are negative.

Physical Exam
Constitutional:
Appearance: He is well-developed.
HENT:
Head: Normocephalic and atraumatic.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Cardiovascular:
Rate and Rhythm: Normal rate.
Pulmonary:
Effort: Pulmonary effort is normal.
Musculoskeletal:
Cervical back: Normal range of motion.
Skin:
General: Skin is warm and dry.
Neurological:
Comments: **Patient is hyperverbal, with rapid speech. + grandiosity
**

Procedures

[table#9]:
MDM (ED Course and Disposition)

ASSESSMENT and PLAN

This is a 34 y.o. male who presents with paranoia, hyperverbal
-Given patient's presentation is concerning for acute mania in setting of his bipolar disorder. At this point, denies SI or HI, and is nonthreatening. Concern for destabilized psychiatric condition however. And believe needs psychiatric evaluation. He is medically clear at this time for this purpose

[table#10]:
Encounter Diagnosis
Name	Primary?
•	Bipolar affective disorder, remission status unspecified (CMS-HCC)	Yes

MDM:
: *Refer to text in Assessment and Plan*

ED CRITICAL CARE:
Critical Care: *No*

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.

This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.

This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

Because of a physical, mental, or emotional condition, do you have difficulty doing errands alone such as visiting a doctor's office or shopping? (15 years old or older)

Answer	Date of Assessment	Author	Status
No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Mental Status - documented in this encounter

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Progress Notes - documented in this encounter

Michael Kleinman, DO - 12/01/2021 5:31 PM EST

Formatting of this note might be different from the original.

Chief Complaint: Lower extremity numbness

Polyneuropathy, peripheral sensorimotor axonal
34-year-old man with a rheumatologic condition causing primarily lower extremity joint pains and swelling who has also been diagnosed with B12 deficiency earlier this fall, already treated with B12 replacement. He has been experiencing numbness and tingling primarily in the distal lower extremities over the last year. His examination demonstrates reduced muscle bulk in the distal lower extremities. Vibratory sensation is markedly abnormal in the feet. His electrophysiologic testing demonstrated evidence of a severe, axonal generalized sensorimotor polyneuropathy. His skin temperature was noted to be markedly reduced. It was difficult to adequately warm his distal lower extremities. This could account for the mildly prolonged distal latencies and moderately slowed conduction velocities. The etiology of his polyneuropathy is not clear. Some contribution from his significant B12 deficiency is possible. It is also possible that this is related to his rheumatologic condition. His neuropathy is not consistent with an inflammatory demyelinating polyneuropathy which could be seen in association with TNF inhibitors. Previous laboratory testing has demonstrated elevated inflammatory markers, normal serum protein electrophoresis with immunofixation. He does not have any history of elevated blood sugars to account for this. A neuropathy this severe and someone this age could also be the result of a recessive axonal hereditary sensorimotor polyneuropathy.
–I would like to touch base with his rheumatologist in order to get a better sense of what he is being treated for.
–He should be receiving ongoing vitamin B12 replacement. A repeat level should have been done to make sure that his vitamin B12 level is now well within normal limits. We will contact his primary care doctor's office to see if they have done this.
–I would like to reevaluate him in approximately 3 months. He will call here if he notes progressive lower extremity weakness.

HPI: 34-year-old man with a history of an autoimmune form of arthritis and B12 deficiency who presents for electrophysiologic evaluation of distal lower extremity numbness and tingling. I initially evaluated him on 10/15/2021.

He reports that numbness is present from the toes halfway up the left foot. Recently he has been suffering from more lower extremity joint pains as well as swelling. Today his lower extremity joints have been particularly painful. He questions whether this could be related to a prior diagnosis of Lyme disease. He also notes that his distal extremities tend to be quite cold though he does not feel how cold they are. There has been no change in strength. He continues on Simponi treatment for his arthritis. He is followed by rheumatology.

Medications:
[table#1]:
Outpatient Medications Marked as Taking for the 12/1/21 encounter (Office Visit) with Kleinman, Michael S, DO
Medication	Sig	Dispense	Refill
•	Omeprazole 40 MG Capsule Delayed Release	daily		
•	Simponi 50 MG/0.5ML Solution Auto-injector	every 30 days		
•	FLUoxetine 20 MG Cap	Take 60 mg daily by mouth		
•	acetaminophen 500 MG Tab	Take 1,000 mg by mouth every 6 hours as needed for Pain		
•	ibuprofen 200 MG Tab	Take 400 mg by mouth every 6 hours as needed for Pain Take with food.		
•	Amphetamine-Dextroamphetamine 10 MG TABS	Take 20 mg by mouth 3 times daily Dx: ADHD		
•	clonazePAM 1 MG TABS	Take 1 mg by mouth daily 1 to 2 tabs		
•	lamoTRIgine 200 MG TABS	Take 100 mg by mouth nightly Do not take nights prior to ECT

ROS:
See HPI

VITALS:
**Ht 1.854 m (6' 1") | Wt 95.3 kg (210 lb) | BMI 27.71 kg/m^2 **

Physical Examination:
****
Focused examination demonstrates moderate swelling in bilateral feet. His feet are quite cold and clammy. Muscle bulk is reduced in bilateral feet. Strength is 5/5 throughout bilateral upper and lower extremities. Pinprick sensation is intact in the feet. Vibratory sensation is markedly reduced at bilateral toes. Reflexes are present but diminished in the lower extremities.

EMG & NCV Findings:
Motor conduction studies of the left peroneal nerve recording extensor digitorum brevis demonstrated a severely reduced (nearly absent) response amplitude with stimulation at the ankle. The distal latency is severely prolonged though this is not considered to be technically accurate given how low the response amplitude is.

Motor conduction studies of the left peroneal nerve recording tibialis anterior demonstrates a normal distal latency, moderately reduced response amplitudes and normal conduction velocity across the fibular head.

Motor conduction studies of the left tibial nerve demonstrated a moderately prolonged distal latency, severely reduced response amplitudes and mildly slowed conduction velocity. F-wave minimum latency was moderately prolonged.

Motor conduction studies of the right peroneal nerve recording extensor digitorum brevis demonstrated a severely reduced (nearly

absent) response amplitude with stimulation at the ankle.

Motor conduction studies of the right tibial nerve with stimulation at the ankle demonstrated a mildly prolonged distal latency and severely reduced response amplitude.

Motor conduction studies of the left ulnar nerve were normal, including F-wave minimal latency.

The left sural sensory response was absent. Sensory conduction study of the right sural nerve demonstrated a severely reduced response amplitude and moderately slowed conduction velocity.

Sensory conduction study of the left radial nerve was normal.

Concentric needle electromyography (EMG) was performed in selected muscles representing the left L4-S1 myotomes. Mild active denervation with moderate chronic reinnervation and mildly reduced recruitment was seen in tibialis anterior. Severe chronic reinnervation with mildly reduced recruitment was seen in extensor hallucis longus. Mild chronic reinnervation was seen in medial gastrocnemius. Vastus lateralis was normal.

Impression:
Abnormal study.
The electrophysiologic data is consistent with a severe axonal generalized sensorimotor polyneuropathy.

Thank you for involving me this patient's care.
A total of 25 minutes were spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable/billable services.

Kleinman, Michael S, DO 12/1/2021 5:31 PM

EMG & NCV Findings:

Motor conduction studies of the left peroneal nerve recording extensor digitorum brevis demonstrated a severely reduced (nearly absent) response amplitude with stimulation at the ankle. The distal latency is severely prolonged though this is not considered to be technically accurate given how low the response amplitude is.

Motor conduction studies of the left peroneal nerve recording tibialis anterior demonstrates a normal distal latency, moderately reduced response amplitudes and normal conduction velocity across the fibular head.

Motor conduction studies of the left tibial nerve demonstrated a moderately prolonged distal latency, severely reduced response amplitudes and mildly slowed conduction velocity. F-wave minimum latency was moderately prolonged.

Motor conduction studies of the right peroneal nerve recording extensor digitorum brevis demonstrated a severely reduced (nearly absent) response amplitude with stimulation at the ankle.

Motor conduction studies of the right tibial nerve with stimulation at the ankle demonstrated a mildly prolonged distal latency and severely reduced response amplitude.

Motor conduction studies of the left ulnar nerve were normal, including F-wave minimal latency.

The left sural sensory response was absent. Sensory conduction study of the right sural nerve demonstrated a severely reduced response amplitude and moderately slowed conduction velocity.

Sensory conduction study of the left radial nerve was normal.

Concentric needle electromyography (EMG) was performed in selected muscles representing the left L4-S1 myotomes. Mild active denervation with moderate chronic reinnervation and mildly reduced recruitment was seen in tibialis anterior. Severe chronic reinnervation with mildly reduced recruitment was seen in extensor hallucis longus. Mild chronic reinnervation was seen in medial gastrocnemius. Vastus lateralis was normal.

Impression:

Abnormal study. The electrophysiologic data is consistent with a severe axonal generalized sensorimotor polyneuropathy.

Patient Instructions - documented in this encounter

Patient Instructions
Michael Kleinman, DO - 10/15/2021 1:51 PM EDT
Formatting of this note might be different from the original.
I will have you return for EMG and nerve conduction testing to look for evidence of neuropathy. I will also obtain an MRI scan of your cervical spine to rule out a lesion of the cervical spinal cord causing the pain radiating down your back when you flex your neck.
Electronically signed by Michael Kleinman, DO at 10/15/2021 1:52 PM EDT

Progress Notes - documented in this encounter

Michael Kleinman, DO - 10/15/2021 1:19 PM EDT
Formatting of this note might be different from the original.
Chief Complaint: Numbness and tingling

Numbness and tingling
34-year-old man with a history of significant, recently treated vitamin B12 deficiency as well as reactive arthritis who has had problems with numbness and tingling in the lower extremities for about the last year. He reports a history consistent with him having a Lhermitte sign which involves the pain radiating down the spine with neck flexion. This is typically associated with cervical spine lesions. His examination also demonstrates evidence of a length dependent polyneuropathy with reduced vibratory sensation in the toes and reduced temperature sensation in a stocking distribution. His work-up thus far has not demonstrated any abnormalities which would account for these symptoms other than a vitamin B12 deficiency which is now being treated. It is possible that his significant neuropathy could be the result of his vitamin B12 deficiency depending on how long he had a low vitamin B12 level. I would not expect neuropathy related to vitamin B12 deficiency affecting the feet to improve too quickly.
–In order to investigate his reported pain down the spine with neck flexion I will obtain an MRI scan of the cervical spine.
–We also discussed the fact that autoimmune conditions can have neuropathy as an associated issue, both large fiber and small fiber neuropathy.
–He will also return here for EMG and nerve conduction studies to further characterize his neuropathy.

HPI: 34-year-old man with a history of severe depression and an autoimmune form of arthritis who is referred for evaluation of numbness and tingling. He is seen along with his mother.

He estimates that his current problem with numbness and tingling began in the last year. He has had pain in his joints for years which is what lead to a diagnosis of reactive arthritis. He has been treated with Simponi for the last couple of years. He thinks Simponi has had a mild benefit in terms of pain reduction. He has had less joint swelling on this medication.

His numbness and tingling began in his lower back. He states that he has had tingling in the low back for a long time. Tingling is more prominent in the toes and is better up the legs. He reports that with neck flexion he has significant pain radiating down the spine. He has had some numbness in the finger tips but states that this improved after starting treatment for B12 deficiency. He has had 4 weekly injections of B12. His vitamin B12 level on September 14 was less than 150. His symptoms overall have improved quite a bit with this treatment. He has been diagnosed with chronic lyme in the past. He reports that brain fog, memory issues, ankle and knee swelling were symptoms from this. Treatment began 4-5 years ago. He is not receiving any treatment for this at the current time. There was also a suspicion for mold toxicity. Other recent laboratory testing demonstrates an elevated CRP level at 9.5. TSH was normal. A CBC was normal. Sed rate was normal. Folate level was normal. Serum protein electrophoresis with immunofixation was negative. A Lyme antibody screen was negative. He has had MRI scans of his lumbar spine and thoracic spine which have not demonstrated any abnormalities to explain his symptoms.

He reports that his legs have been very weak.

Denies having any difficulties with bowel or bladder function.

He has not had any falls. His balance is off.

Medications:
[table#1]:
Outpatient Medications Marked as Taking for the 10/15/21 encounter (Office Visit) with Kleinman, Michael S, DO
Medication	Sig	Dispense	Refill
•	Omeprazole 40 MG Capsule Delayed Release	daily		
•	Simponi 50 MG/0.5ML Solution Auto-injector	every 30 days		
•	FLUoxetine 20 MG Cap	Take 60 mg daily by mouth		
•	acetaminophen 500 MG Tab	Take 1,000 mg by mouth every 6 hours as needed for Pain		
•	ibuprofen 200 MG Tab	Take
400 mg by mouth every 6 hours as needed for Pain Take with food.		
•	Amphetamine-Dextroamphetamine 10 MG TABS	Take 20 mg by mouth 3 times daily Dx: ADHD		
•	clonazePAM 1 MG TABS	Take 1 mg by mouth daily 1 to 2 tabs		
•	lamoTRIgine 200 MG TABS	Take 100 mg by mouth nightly Do not take nights prior to ECT

VITALS:
**BP 113/77 (Patient Position: Sitting, Cuff Size: Adult) | Pulse 80 | Wt 95.3 kg (210 lb) Comment: PATIENT REPORTED | BMI 27.53 kg/m² **

Physical Examination:
****
In general he is alert and in no acute distress. Head is normocephalic and atraumatic. Moist oral mucosa.
Neck is supple. There are no carotid bruits.
Heart rate and rhythm is normal.
Respiratory effort is normal.
Extremities are without cyanosis or edema. Straight leg raise is negative bilaterally.
Mood is good.

Neurologic examination demonstrates fluent speech. Attention and concentration are grossly intact. Recent and remote recall are intact.

Optic disks were not visualized. Visual fields are full to confrontation. Pupils are equal round and reactive to light. Extraocular movements are intact with normal pursuits and no nystagmus. Facial sensation is normal. There is no facial weakness. Hearing is intact to voice. Soft palate elevates in the midline. Shoulder shrug is symmetric. Tongue protrudes in the midline.

Muscle bulk and tone is normal in bilateral upper and lower extremities. Strength is 5/5 throughout bilateral upper and lower extremities. Reflexes are 1+ at bilateral biceps and 2+ at bilateral brachioradialis and triceps.

Temperature sensation is reduced to the midshin bilaterally. Pinprick sensation is intact in the toes. Testing pinprick sensation in the calves produces paresthesias. Vibratory sensation is felt for 1-2 seconds at the toes and 10+ seconds at the right ankle and 7-8 seconds at the left ankle.

There is no dysmetria during finger-to-nose and heel-to-shin testing bilaterally. He has pain in his knees and low back with heel-to-shin testing.

He is able to stand from a chair with arms crossed without difficulties. His gait is steady.

Thank you for involving me this patient's care.
*A total of 60 minutes wer
e spent in the care and management of the patient today, including face to face time as well as activities including but not limited to case review, counseling, education, care coordination and documentation. Time excludes separately reportable/billable services.*

Functional Status - documented as of this encounter

Are you deaf or do you have serious difficulty hearing?

Answer	Date of Assessment	Author	Status
No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Are you blind or do you have serious difficulty seeing, even when wearing glasses?

Answer	Date of Assessment	Author	Status
No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Do you have serious difficulty walking or climbing stairs? (5 years old or older)

Answer	Date of Assessment	Author	Status
No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Do you have difficulty dressing or bathing? (5 years old or older)

Answer	Date of Assessment	Author	Status
No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Because of a physical, mental, or emotional condition, do you have difficulty doing errands alone such as visiting a doctor's office or shopping? (15 years old or older)

Answer	Date of Assessment	Author	Status
No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Mental Status - documented in this encounter

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Timothy Sweeney, MD - 03/26/2021 7:17 PM EDT

Formatting of this note might be different from the original.

TYLENOL1000mg each 4 hours up to 4 doses in 24 hours.

IBUPROFEN 400mg each 6 hours. Use ibuprofen for up to 1 week. Always consult your doctor for longer term use.*

*Tylenol and Ibuprofen are often used incorrectly for pain control. The medical literature is clear: for best pain relief 1) use the medicines on schedule, not just when you feel pain. 2) remember that tylenol and ibuprofen are "synergistic." When scheduled together, they give more relief than one would expect from the simple combination of the two.

Hydration is essential and will speed recovery. At least a third of the fluds that you take in should have salt and sugar in them (Gatorade is an example of such a fluid). Our intestines absorb water much more efficiently when salt and sugar are part of the fluid. Your kidneys will show you when you are hydrated: If you urine is clear and there is a lot of it, you are hydrated. If it is dark and sparse, you are not.

Electronically signed by Timothy Sweeney, MD at 03/26/2021 7:17 PM EDT

CORONAVIRUS COVID-19 - Final result (03/26/2021 7:12 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

XR CHEST PORTABLE - Final result (03/26/2021 6:46 PM EDT)

Anatomical Region	Laterality	Modality
Chest		Computed Radiography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			03/26/2021 6:35 PM EDT	

Narrative

03/26/2021 7:53 PM EDT

Narrative

EXAM: XR CHEST PORTABLE

INDICATION: cough

COMPARISON: None.

TECHNIQUE: Single view of the chest.

FINDINGS:

The lungs are clear. There is no pleural effusion or pneumothorax. Mediastinal contour, hilar contour, heart size and pulmonary vascularity are within normal limits. Visualized osseous structures are unremarkable.

IMPRESSION:

No acute process identified.

This report has been read by David Pozivilko, MD and will be reviewed by the attending radiologist covering this service. 3/26/2021 7:30 PM

I, Brian Livingston, MD have personally reviewed the images and interpretation and agree with the final report. Dictated by David Pozivilko, MD.

Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 12/02/2020 8:49 AM EST

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 12/02/2020 8:49 AM EST

SARS-COV-2 ASYMPTOMATIC PCR SCREEN - Final result (11/29/2020 11:00 AM EST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 11/11/2020 7:55 AM EST

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 11/11/2020 7:55 AM EST

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 10/21/2020 9:52 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 10/21/2020 9:52 AM EDT

Narrative

```
.MANUAL ENTRY (EXTERNAL LAB) - 10/21/2020 8:00 AM EDT
Bokat, Pamela G, MD     10/21/2020  9:20 AM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 10/21/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 27
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 62 % energy
Pulse Width:0.5
Frequency:65
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 76 seconds and Motor Seizure length
= 9 seconds

The seizure was Excellent
Significant problem with treatment: No
Procedure Comments: excellent seizure

The plan for the next treatment includes : continue same
The next treatment is scheduled for 2 Week(s)
```

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 10/07/2020 8:14 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 10/07/2020 8:14 AM EDT

SARS-COV-2 ASYMPTOMATIC PCR SCREEN - Final result (10/05/2020 9:00 AM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 09/23/2020 8:39 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 09/09/2020 8:25 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

** You are due for a required annual physical exam with your PCP by October 21, 2020, along with a CBC and BMP. Please make sure to schedule this with your doctor so as not to interrupt your ECT schedule.

** Talk with Dr. Abernathy about partial hospital and whether she feels this or a therapist may be helpful moving forward.

Electronically signed by Elizabeth, RN at 09/09/2020 8:25 AM EDT

SARS-COV-2 ASYMPTOMATIC PCR SCREEN - Final result (09/08/2020 4:25 PM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 08/26/2020 8:24 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

*** You are due for an annual physical exam along with CBC and CMP before October 21, 2020.

Electronically signed by Elizabeth, RN at 08/26/2020 8:24 AM EDT

ELECTROCONVULSIVE THERAPY - Final result (08/26/2020 7:45 AM EDT)

Narrative

```
.MANUAL ENTRY (EXTERNAL LAB) - 08/26/2020 7:45 AM EDT
Bokat, Pamela G, MD     8/26/2020  9:04 AM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 8/26/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 23
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 45 % energy
Pulse Width:0.5
Frequency:45
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 23 seconds and Motor Seizure length
=   seconds

The seizure was Excellent
Significant problem with treatment: No
Procedure Comments: good seizure but briefer

The plan for the next treatment includes : would increase to
0.5/55/8.0.  Per psychiatric assessment, pt reports chronic
passive suicidal ideation without plan or intent.  He reports
that ECT improves his suicidal thoughts and looks forward to
returning in 1.5 weeks.  He has a good support system and
providers and feels safe to go home.
The next treatment is scheduled for 1.5 Week(s)
```

Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 08/12/2020 8:27 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 08/12/2020 8:27 AM EDT

Narrative

```
.MANUAL ENTRY (EXTERNAL LAB) - 08/12/2020 7:15 AM EDT
Muscat, Sarah D, MD     8/12/2020  8:14 AM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 8/12/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 22
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 45 % energy
Pulse Width:0.5
Frequency:40
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 90 seconds and Motor Seizure length
= 34 seconds

The seizure was Excellent
Significant problem with treatment: No
Procedure Comments: Did well with these doses of meds

The plan for the next treatment includes : one week; continue
same settings and meds
The next treatment is scheduled for 7 Days

Recommend glycopyrrolate next treatment; patient with many
secretions.
```

• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 08/07/2020 7:18 AM EDT

SARS-COV-2 ASYMPTOMATIC PCR SCREEN - Final result (08/07/2020 8:02 AM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Preventions (CDC)

Narrative

.MANUAL ENTRY (EXTERNAL LAB) - 08/07/2020 7:00 AM EDT

Narrative

```
Muscat, Sarah D, MD     8/7/2020  8:02 AM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 8/7/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 21
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 51 % energy
Pulse Width:0.5
Frequency:45
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 62 seconds and Motor Seizure length
= 46 seconds

The seizure was Excellent
Significant problem with treatment: No
Procedure Comments: again needed extra brevital to fall asleep;
would increase dose to 150

The plan for the next treatment includes : will treat again in
five days as patient is more depressed
The next treatment is scheduled for 5 Days

Covid screening performed again today as patient will return next
week.
He was negative this week as well.

Results - documented in this encounter

SARS-COV-2 ASYMPTOMATIC PCR SCREEN - Final result (08/04/2020 10:05 AM EDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Coronavirus COVID-19	NOT DETECTED	NOT DETECTED			NORDX SCARBOROUGH CAMPUS	

Comment:

```
NOTE: Negative results do not preclude SARS-CoV-2
infection and should not be used as the sole basis
for patient management decisions.
This SARS-CoV-2 assay is a real-time RT-PCR test intended
for the qualitative detection of nucleic acid from the
SARS-CoV-2 in respiratory specimens from individuals
suspected of having COVID-19 infection.
This test was developed and its performance characteristics
determined by NorDx Laboratory. This test has not been FDA
cleared or approved. This test has been authorized by the
FDA under an Emergency Use Authorization (EUA). This test
has been validated in accordance with the FDA's Guidance
Document "Policy for Diagnostics Testing in Laboratories
Certified to Perform High Complexity Testing under CLIA
prior to Emergency Use Authorization for Coronavirus
Disease-2019 during the Public Health Emergency" issued on
February 29th, 2020.
CDC 2019-nCoV Real Time RT-PCR Diagnostic Panel (CDC) Centers for Disease
Control and Prevention's (CDC)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 07/14/2020 11:27 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 07/14/2020 11:27 AM EDT

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 06/29/2020 8:27 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

```
.MANUAL ENTRY (EXTERNAL LAB) - 06/12/2020 8:00 AM EDT
Muscat, Sarah D, MD     6/12/2020  9:53 AM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 6/12/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 18
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 51 % energy
Pulse Width:0.5
Frequency:45
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 13 seconds and Motor Seizure length
= 13 seconds

The seizure was Brief, Adequate
Significant problem with treatment: No
Procedure Comments: Patient did not fall asleep quickly wth 100
of methohexital so gave succ then additional 30 methohexital.
Because of this recent bolus his seizure was shorter however was
good wave form.  As was longer than ten seconds did not want to
restimulate

The plan for the next treatment includes : Would use 120
methohexital as initial bolus; HV if possible; succ dose is good,
consider slight increase in stimulus dose to 60%
The next treatment is scheduled for 2 Week(s)

Clinically we discussed that he has had a good response to ECT
We will continue with slow taper, plan to continue for six months
(began end of 2/20)
Coordinate with his psychiatric provider.
```

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 05/29/2020 10:19 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 05/29/2020 10:19 AM EDT

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 05/18/2020 10:03 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 05/18/2020 10:03 AM EDT

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 05/08/2020 2:00 PM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Narrative

```
.MANUAL ENTRY (EXTERNAL LAB) - 05/08/2020 12:00 PM EDT
Muscat, Sarah D, MD     5/8/2020  1:45 PM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 5/8/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 15
Phase: Continuation
Electrode Placement: Bitemporal
ECT Settings: 51 % energy
Pulse Width:0.5
Frequency:45
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 55 seconds and Motor Seizure length
= 39 seconds

The seizure was Excellent
Significant problem with treatment: No
Procedure Comments: great seizure at these settings with HV

The plan for the next treatment includes : same
The next treatment is scheduled for 10 Days
```

• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Bokat, Pamela G, MD     4/29/2020  9:20 AM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 4/29/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 14
Phase: Acute
Electrode Placement: Bitemporal
ECT Settings: 34 % energy
Pulse Width:0.5
Frequency:40
Duration:7 seconds
Amplitude:800

Seizure Length: EEG length = 18 seconds and Motor Seizure length
=   seconds

The seizure was Brief
Significant problem with treatment: No
Procedure Comments: brief seizure despite increasing settings

The plan for the next treatment includes : either increae
settings or switch to etomidate
The next treatment is scheduled for 9 Days

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 04/22/2020 9:15 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 04/15/2020 8:50 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 04/15/2020 8:50 AM EDT

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 04/10/2020 12:55 PM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 04/10/2020 12:55 PM EDT

Narrative

```
.MANUAL ENTRY (EXTERNAL LAB) - 04/10/2020 10:30 AM EDT
Muscat, Sarah D, MD     4/10/2020 12:27 PM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 4/10/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 11
Phase: Acute
Electrode Placement: Bitemporal
ECT Settings: 34 % energy
Pulse Width:0.5
Frequency:40
Duration:6 seconds
Amplitude:800

Seizure Length: EEG length = 50 seconds and Motor Seizure length
= 34 seconds

The seizure was Excellent
Significant problem with treatment: No
Procedure Comments: Beautiful seizure with postictal suppression

The plan for the next treatment includes : same
The next treatment is scheduled for 5 Days

Consider stop after next treatment and assess over next few
weeks.....
Unclear if has had any real response.
Bring in QUIDS next treatment.
```

No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Because of a physical, mental, or emotional condition, do you have difficulty doing errands alone such as visiting a doctor's office or shopping? (15 years old or older)

Answer	Date of Assessment	Author	Status
No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Mental Status - documented in this encounter

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 04/07/2020 8:43 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 03/27/2020 9:11 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 03/27/2020 9:11 AM EDT

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 03/20/2020 7:54 AM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 03/20/2020 7:54 AM EDT

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 03/16/2020 12:17 PM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Have you been in close proximity with someone who is currently sick with the COVID-19 or any other respiratory illness within the past 14 days? Do they have a fever, a new cough in the last 14 days, shortness of breath, a sore throat or a runny nose? If so, please call the ECT coordinator before coming in for your appointment.
• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Narrative

```
.MANUAL ENTRY (EXTERNAL LAB) - 03/11/2020 7:15 AM EDT
Bokat, Pamela G, MD     3/11/2020  8:05 AM
ECT PROCEDURE NOTE

Problem List  Date Reviewed: 3/11/2020
      ICD-10-CM Priority Class Noted
* (Principal) Major depression, recurrent, chronic (CMS-HCC)
F33.9   2/28/2020

ECT Treatment # 5
Phase: Acute
Electrode Placement: Unilateral Right
ECT Settings: 41 % energy
Pulse Width:0.3
Frequency:80
Duration:8 seconds
Amplitude:800

Seizure Length: EEG length = 23 seconds and Motor Seizure length
=   seconds

The seizure was
Significant problem with treatment: No
Procedure Comments: #1 - 0.3/70/7.0 - 10 seconds.  #2 0.3/80/8.0
= 23

The plan for the next treatment includes : Use 0.3/80/8.0 and
propofol given for weakness on waking
The next treatment is scheduled for 2 Days
```

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Jennifer, RN - 03/09/2020 12:43 PM EDT

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Jennifer, RN at 03/09/2020 12:43 PM EDT

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 03/04/2020 10:46 AM EST

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 03/04/2020 10:46 AM EST

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 03/02/2020 1:55 PM EST

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• You should not be drinking alcohol while receiving ECT, especially 24 hours prior to your treatment.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 03/02/2020 1:55 PM EST

Answer	Date of Assessment	Author	Status
No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Because of a physical, mental, or emotional condition, do you have difficulty doing errands alone such as visiting a doctor's office or shopping? (15 years old or older)

Answer	Date of Assessment	Author	Status
No	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Mental Status - documented in this encounter

Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions? (5 years old or older)

Answer	Entry Date	Author	Status
Yes	03/31/2015 3:19 PM EDT	Rebecca, RN	Active

Discharge Instructions - documented in this encounter

Discharge Instructions

Elizabeth, RN - 02/28/2020 1:30 PM EST

Formatting of this note is different from the original.

ECT DISCHARGE INSTRUCTIONS:

• After your treatment you may feel drowsy and have a problem concentrating.
• Stay at home and rest for the remainder of the day.
• No driving at all during an acute or index ECT series (two or more treatments per week). Cognition and concentration may be impaired.
• Once in the maintenance/continuation phase of ECT (no more than one treatment per week), do not drive for 24 hours after your procedure.
• Be cautious about making major decisions while you are undergoing ECT.
• Eat small meals often at first and increase slowly.
• Call the ECT coordinator by dialing 662-3129 for any problems you feel are related to your procedure, or go to the nearest emergency room.

FOR YOUR NEXT ECT APPOINTMENT:

• Do not have anything to eat or drink after midnight the night prior to your treatment. If you have a later appointment and need fluids, you may have clear liquids (water, gatorade, apple juice, cranberry juice) up until two hours prior to hour appointment time.
• If you are on a benzodiazepine or anti-seizure medication, do not take this medication after 6P the night prior to your treatment.
• The morning of your treatment, do not take your morning medications unless instructed to do so.
• You should take your scheduled morning cardiac medications and medications for indigestion with a small sip of water two (2) hours prior to your appointment.
• Remove all head and neck jewelry before coming in for your treatment.
• Keep hair free of all hair products other than shampoo and conditioner.
• Make sure you have arranged for someone to drive you home and that you have someone who can stay with you if needed if you are confused.
• If you have any questions prior to your scheduled treatment, please call Beth Perry, RN, ECT Coordinator, at 662-3129.

Electronically signed by Elizabeth, RN at 02/28/2020 1:30 PM EST

US GUIDED LIVER BIOPSY - Final result (04/03/2015 11:53 AM EDT)

Anatomical Region	Laterality	Modality
Abdomen		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			04/03/2015 10:00 AM EDT	

Narrative

04/06/2015 8:05 AM EDT

EXAM: ULTRASOUND-GUIDED PERCUTANEOUS RANDOM CORE LIVER BIOPSY

INDICATION: Ultrasound-guided liver biopsy requested. Reactive arthritis. Elevated ALT, AST. Evaluate for hemochromatosis with quantitative iron evaluation as well.

COMPARISON: Ultrasound 12/23/14.

FINDINGS: Identification and procedure time out were performed. Signed informed consent was obtained.

The biopsy was performed by Dr. Winn with Dr. Brian Alan Perry.

An oblique right intercostal approach was selected. Realtime ultrasound guidance was used throughout the procedure. Standard sterile preparation and technique were employed. Local anesthesia was obtained with infusion of 1% lidocaine solution. A
biopsy was performed with coaxial technique with the need for multiple core specimens for the diagnostic testing requested, per discussion with the Pathology department prior to the procedure. With realtime ultrasound guidance, a 17-gauge introducer
needle was placed into the right lobe of the liver. A biopsy was performed through that with an 18-gauge spring loaded automatic core biopsy needle. Two separate 2 cm long cores were obtained. These were placed together in a single container of
formalin and submitted for histopathologic evaluation and quantitative iron evaluation. The biopsy needle was removed and stylet was placed within the coaxial needle. After approximately 3 minutes the stylet was removed and revealed no bleeding through
the coaxial needle. The coaxial needle was then removed. Postbiopsy imaging showed no evidence of hemorrhage or immediate perihepatic hematoma.

The site was cleansed and a band-aid was applied. The patient was placed in right lateral decubitus recumbency and brought to the radiology nursing area for postbiopsy observation with orders placed in the electronic medical record. Specimen was
submitted for diagnostic testing as ordered.

IMPRESSION: Ultrasound-guided percutaneous random core liver biopsy performed. Details above.

Narrative

CASE: SS-15-08090
PATIENT: WILLIAM SERETTA

SPECIMEN: A. RT LOBE LIVER BX Client: RADO

FINAL DIAGNOSIS:

Liver, right lobe, needle core biopsy: Steatohepatitis with early zone 3 fibrosis.
- Kleiner NAS score including:
Steatosis: 2/3.
Lobular inflammation: 1/3.
Ballooning degeneration: 1/2.
- Fibrosis: 1A.
DMD/cbp 4/6/2015

COMMENT:

The biopsy is adequate and shows an active steatohepatitis. Bile ducts appear intact. Etiological considerations would alcohol and the various causes of non-alcoholic fatty liver disease. The Kleiner activity score and fibrosis are provided. A reticulin stain highlights non-neoplastic hepatic plate architecture with focal areas of collapse. An iron stain is focally positive within the Kupffer cells. There is no hepatocyte or bile duct accumulation of iron. The iron does not appear increased significantly. Serologic iron testing may be influenced by the steatohepatitis identified. No prominent intracytoplasmic globules are identified on PAS/PAS-D stains. A trichrome stain shows a pattern of fibrosis limited to the zone 3.

CLINICAL HISTORY: 27-year-old male with reactive arthritis and elevated AST/ALT. Evaluate for hemochromatosis.

GROSS DESCRIPTION:

The specimen is received in formalin labeled William B. Seretta and consists of five tan cores of tissue ranging from 0.5 to 1.7 cm in length and each measuring 0.1 cm in diameter. (5NS) (1 cassette)
AJG/cms 04/03/2015
